

# ENVIRONMENTAL PERFORMANCE OF AGRICULTURE IN OECD COUNTRIES SINCE 1990:

## DENMARK Website Information

This Website Information is related to the OECD publication (2008) *Environmental Performance of Agriculture in OECD countries since 1990* which is available at: <http://www.oecd.org/tad/env/indicators>

## DENMARK

### WEBSITE INFORMATION

#### 1. National Agri-environmental Indicators Development

*Denmark has an extensive environmental monitoring system which includes agriculture.* This system, starting in the late 1980s, is particularly well developed for tracking agricultural nutrients in water bodies. The monitoring programme collects annual data in five agricultural water catchments that have an important influence on policy making. The annual fertilizer and manure accounts, and applications for single payments cover a major share of Danish farms and provide information on crops, fertilizer use, manure production and use, etc. This information is used by national research and farmer organisations to track developments and as a basis for Geographical Information System development. Environmental monitoring has been supported by studies evaluating the economic and administrative costs of policies aiming to reduce agricultural pollution of water and ecosystems, although there are fewer studies valuing the benefits.
