Governance Facts
Stakeholder Engagement

Frequency of Interactions

Cross-Sector Policy Co-ordination

Spatial Planning: YES
Regional development: NO
Energy: NO
Environment: YES
Agriculture: YES

Interdependencies With Surrounding Areas

Use of Evaluation Tools for Urban Water Management

NEVER: n/a
RARELY: ex-post financial analysis
SOMETIMES: national observatory, survey/poll
OFTEN: benchmark evaluation report, regulatory tools
VERY OFTEN: n/a

Forward-Looking Strategies
Priorities

TOP: building/operating/maintaining water infrastructure, enhancing synergies with other policy areas, raising awareness on water available, risks, quality, costs
MIDDLE: developing new water information systems, developing technical and non-technical innovation, ensuring value for money, improving stakeholder engagement, sharing information, commitments, actions for building trust and confidence
LOW: fostering capacity building, training, qualifications, fostering co-operation across levels of government, increasing the willingness to pay for water users

Examples

Drinking water supply
- securing supply of drinking water through cooperation between communities

Sewage collection
- ensure renewal of separate systems by prioritizing the shutters' lower parasitic water infiltration, mainly the treatment of dry weather overflows and infiltration

Water security
- Integrated Stormwater Management, strategic issues, both in terms of safety of people and property, and the environment protection by limiting the waterproofing
