

OECD Trade Facilitation Indicators – Argentina

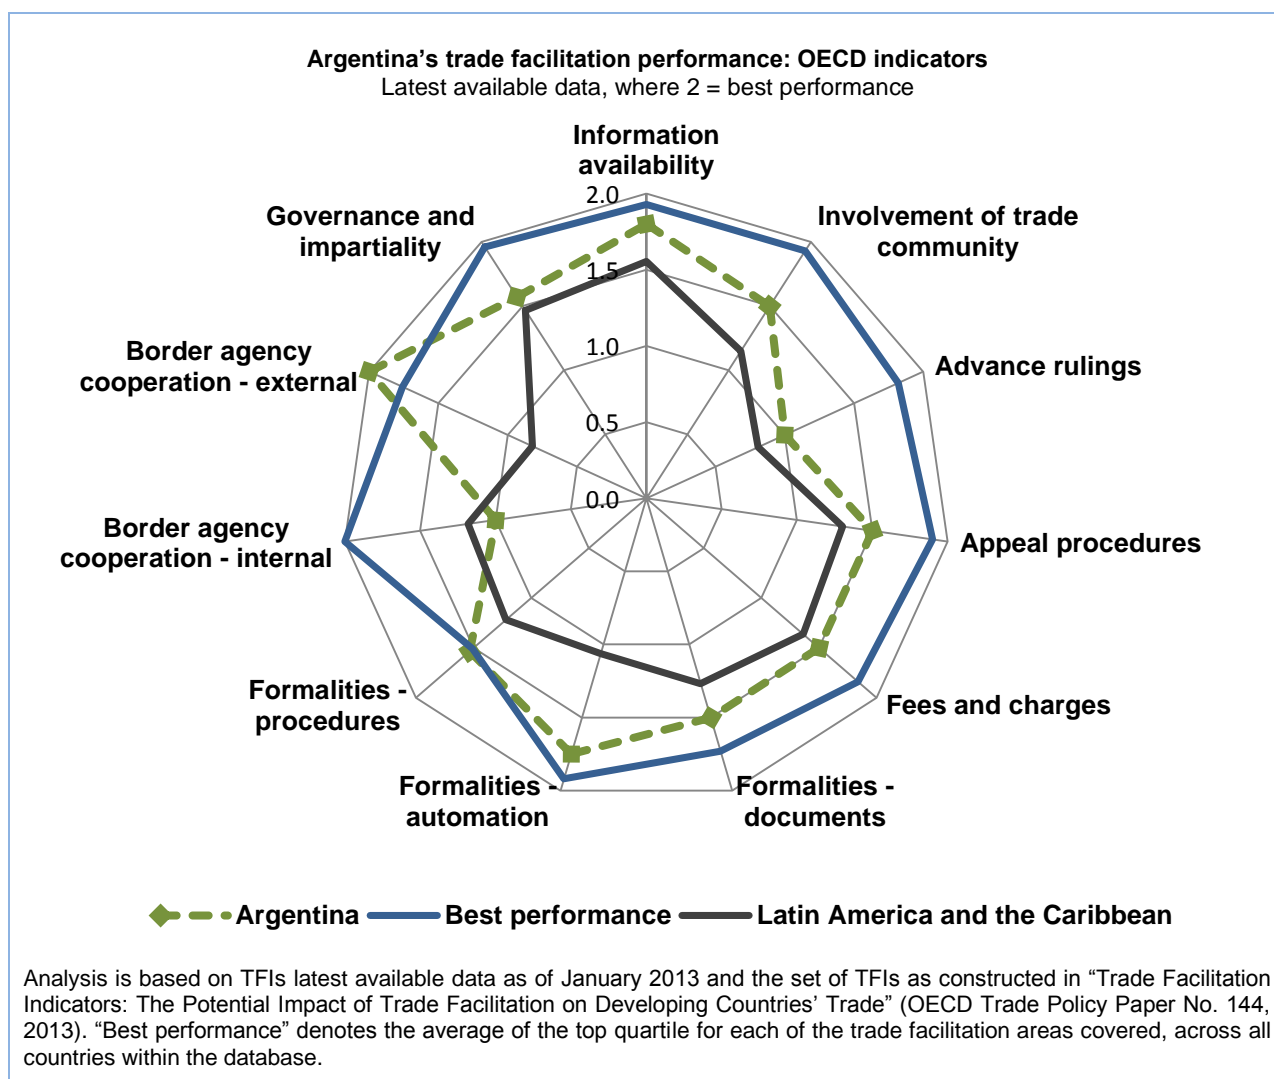

To help governments improve their border procedures, reduce trade costs, boost trade flows and reap greater benefits from international trade, OECD has developed a set of **trade facilitation indicators** that identify areas for action and enable the potential impact of reforms to be assessed.

Estimates based on the indicators provide a basis for governments to prioritise trade facilitation actions and mobilise technical assistance and capacity-building efforts for developing countries in a more targeted way.

OECD analysis shows that trade facilitation measures can benefit all countries in their role as exporters as well as importers, allowing better access to inputs for production and greater participation in the international trading system.

Argentina's trade facilitation performance

- Argentina performs better than the averages of Latin America and the Caribbean and upper middle income countries in the areas of **information availability, automation, streamlining of procedures, external border agency co-operation** and its performance is relatively on par with the averages for **involvement of trade community, appeal procedures, fees and charges, simplification and harmonisation of documents and governance and impartiality**, according to OECD trade facilitation indicators.
- Argentina's performance for **internal border agency co-operation** is below the averages of Latin America and the Caribbean and upper middle income countries.

Areas for action in trade facilitation

OECD quantitative analysis for the group of upper-middle income countries, which includes Argentina, shows that the areas with the greatest impact on increasing bilateral trade flows and lowering trade costs are: **formalities (procedures, documents, automation), governance and impartiality, and information availability**. The indicators **involvement of trade community, advance rulings** and **fees and charges** also have a significant impact on trade flows. These indicators have a strong impact at the manufacturing trade level as well.

Taking into account the trade flow increase and costs reduction potential of the policy areas highlighted by the quantitative analysis, Argentina could draw considerable benefits in terms of trade volumes and trade costs from continued efforts in the areas of **advance rulings, fees and charges, simplification and harmonisation of documents** and **governance and impartiality**.

OECD Trade Facilitation Indicators

OECD has developed the following indicators to assess trade facilitation policies.

- *Information Availability*: Publication of trade information, including on internet; enquiry points.
- *Involvement of the Trade Community*: Consultations with traders.
- *Advance Rulings*: Prior statements by the administration to requesting traders concerning the classification, origin, valuation method, etc., applied to specific goods at the time of importation; the rules and process applied to such statements.
- *Appeal Procedures*: The possibility and modalities to appeal administrative decisions by border agencies.
- *Fees and Charges*: Disciplines on the fees and charges imposed on imports and exports.
- *Formalities-Documents*: Simplification of trade documents; harmonisation in accordance with international standards; acceptance of copies.
- *Formalities-Automation*: Electronic exchange of data; automated border procedures; use of risk management.
- *Formalities-Procedures*: Streamlining of border controls; single submission points for all required documentation (single windows); post-clearance audits; authorised economic operators.
- *Internal Co-operation*: Co-operation between various border agencies of the country; control delegation to Customs authorities.
- *External Co-operation*: Co-operation with neighbouring and third countries.
- *Governance and Impartiality*: Customs structures and functions; accountability; ethics policy.
