BRAZIL**

Room Document N°5, Session 5

SURVEY OF INVESTMENT REGULATION OF PENSION FUNDS

By the OECD Secretariat

**Sao Paulo, Brazil
23-24 May, 2002**

**Fundacao Getulio Vargas
Av. Nove de Julho 2029 – 9° andar, Sao Paulo**

1. This document follows on prior OECD work that presented some analytical and policy issues related to the regulation of investment by pension funds and insurance companies, and provided some evidence on investment regulations in nine member countries. The evidence has been expanded in this document to regulation of investment by pension funds in all member countries.

Methodological issues

2. The information collected concerns all forms of quantitative portfolio restrictions applied to autonomous pension funds in OECD countries at different legal levels (law, regulation, normative, etc). Autonomous pension funds are defined as (i) independent and self-administered legal entities (with legal personality and capacity) different from other institutions providing pension funding services such as banks, investment managers, and insurance companies, or (ii) pools of assets (without legal personality and capacity) whose primary aim is to provide retirement and other old-age benefits (such as disability) to the members of a pension plan. Autonomous pension funds exist in all OECD countries except the **Slovak Republic**, and **Turkey**¹.

3. Two classifications of pension funds are relevant from the perspective of investment regulation. The first is between closed and open pension funds. The main difference is that a closed pension funds supports a retirement plan restricted to specific participants (e.g. employees from a specific company, industry, or government agency), while an open pension fund supports retirement plans that do not have membership restrictions.

4. The second classification is between pension funds that support mandatory pension plans and those that support voluntary pension plans. Compulsion may apply to both employees and employers. In some countries, for example, employers are required to provide pension plans funded via a closed pension fund or an insurance contract (e.g. **Switzerland**), while in others they can also channel their contributions through an open pension fund (e.g. **Australia**). Employees are required to contribute to these pension plans. In other countries, employees are required to contribute only to open pension funds, managed by financial intermediaries (e.g. **Mexico** and **Poland**), or to either closed or open funds (e.g. **Hungary**).

5. In most countries, mandatory pension funds are subject to more stringent regulations than voluntary funds (e.g. **Hungary** and **Poland**). Closed and open pension funds are subject to the same regulations in some countries (e.g. **Hungary**). In **Mexico**, different regulatory regimes exist for closed and open funds, but little information is available on the closed funds. Finally, in **Poland**, the open pension funds operate in the mandatory pension system, while the closed (employee) pension funds collect only voluntary contributions. Therefore, the investment regulation of the latter contains fewer restrictions.

Main findings

6. Table 2 contains a summarised description of all the quantitative restrictions applied to pension fund investment portfolios in OECD countries. Some form of quantitative regulation is applied in all member countries. By far the most common ones are regulations intended to limit conflicts of interest between plan members and pension fund managers. In all countries except **Japan**, pension funds are subject to self-investment limits (investment in assets of the sponsoring company), the ceiling ranging from 25% in **Finland** and **Switzerland** to 2% in **Denmark** and **Germany**.

1. France and Greece are also omitted from this survey because of lack of information.

7. Many OECD countries also limit investment in a single issue or in securities from the same issuer. The limit is usually set at around 10% of the fund, though in some countries it is higher (e.g. **Italy** at 15%).

8. About half of OECD countries where pension funds exist also place limits by asset type (see Table 1). The most common are limits in equities and foreign securities. Equity limits are applied by sixteen of the twenty-seven OECD countries with pension funds. These limits range from 60% in **Sweden** to 0% in **Mexico**. Table 1 lists the countries and limits in equities. Some countries also place tighter restrictions on investment in unquoted shares. This is the case in **Belgium, Finland** and **Portugal**.

9. Eleven OECD countries place no limits on investment in equities. These countries are **Australia, Canada, Ireland, Italy, Japan, Luxembourg, the Netherlands, New Zealand, Spain, the United Kingdom, and the United States**.

10. Countries that limit investment in equities tend also to restrict investment in other asset categories, such as property. The ceilings range from 50% in **Switzerland** to 0% for **Hungarian** and **Mexican** mandatory pension funds. In general, the limit for direct investment in property is lower than that for equities. The only two exceptions are **Finland** and **Switzerland**, where pension funds are allowed to invest a greater percentage of their asset in real estate than in stocks.

11. Various countries also limit loans by pension funds, such as mortgage loans (**Austria, Czech Republic, Finland, Germany, Hungary, Mexico, Poland, and Portugal**). The limit ranges from 70% in **Finland** to 0% in the countries with open funds (**Czech Republic, Hungary, Mexico, and Poland**).

12. Investment limits in other domestic assets such as bonds and bank deposits are much less extended. Limits on corporate and mortgage bonds are imposed only in **Germany, Hungary, Mexico, and Portugal**. A few countries also place limits on investment in liquid assets, such as deposits (**Germany, Italy, Portugal, and Spain**).

13. While no OECD countries impose ceiling in investment in government bonds, two countries apply floors. In **Austria**, pension funds are required to invest at least 35% of their assets in mortgage bonds, government bonds, and Euro denominated debentures. In **Mexico**, pension funds must invest at least 51% of the funds' assets in inflation-linked or inflation protected securities and at least 65% in securities that either have a maturity shorter than 183 days or have floating rate notes whose rate is revised in less than 183 days.

14. Some countries also impose limits on ownership concentration, that is on the portion of a company's capital that pension funds can own. The ceiling ranges from 30% in **Canada** to 2% in **Denmark**.

15. Finally, some countries restrict investment in foreign securities, either through direct ceilings or via currency matching rules. The latter are present in **Finland, Germany, and Portugal**, where pension funds are required to cover at least 80% of their liabilities with assets in the same currency and **Italy**, where the minimum level is 33%.

16. Direct limits on foreign securities exist in some countries, ranging from 65% in **Belgium** to 0% in **Mexico**. Most countries that limit investment in OECD countries impose even tighter limits on investment in securities from non-OECD countries. In fact, only a few countries permit investment in non-OECD securities, including **Australia** (no limit), **Canada** (30% limit), **Hungary** (9% for mandatory pension funds, 6% for voluntary pension funds, investment in non-OECD equity not permitted), **Ireland, Italy** (5%), **Netherlands** (no limit), **New Zealand** (no limit), **Norway** (no limit), **Portugal** (20% limit), the **United Kingdom** (no limit), and the **United States** (no limit).

Note: There are no pension funds in the Slovak Republic and Turkey.

(1) MPF stands for mandatory pension fund; VPF for voluntary pension fund

(2) OPF stands for open pension fund, EPF for employee pension funds (closed funds); NIF stands for national investment funds.

(3) No limit if a debtor or a guarantor is an EEA State, municipality, a municipal authority, a parish located in an EEA State, a deposit bank or an insurance company licensed in an EEA State or a bank or an insurance company comparable to the above mentioned;

Table 2: Regulation of pension fund assets in OECD countries

	Investment regulation					
	Minimum diversification requirements	Self-investment / Conflicts of interest	Other quantitative rules	Ownership concentration limits	Currency matching	Direct limits on foreign investments
Australia	None	Limited to 10%, being reduced to 5% in 2000/1 Loans or financial assistance to members not permitted	None	None	None	None
Austria²	None	Permitted, but requires the explicit approval of the Supervisory Board and limited to 10%.	At least 35% of the assets must be invested in mortgage bonds, government bonds, and debentures denominated in Euro. Limits include: 50% in shares, 20% in property, and 10% in loans yielding a market rate of interest.	None	None	Non-Euro investments and foreign property limited to 50% of investments.
Belgium	Maximum 5% (may be increased to 10% in certain cases) of the fund may be invested in stocks, bonds and notes of the same issuer. Maximum 20% in one single property.	Limited to 15%.	Portfolio investment limited to: - 30% in non-quoted companies - 5% in loans without collateral - 5% in derivatives when not used for hedging purposes	None	None	Localisation requirement: all assets must be located in Belgium or EC countries, but may be invested in securities issued by institutions authorised by a supervisory body similar to the Belgian Banking and Financial Commission.

2 . Pension funds refers to *pensionskassen*, which are under the supervision of the insurance regulator.

	Investment regulation					
	Minimum diversification requirements	Self-investment / Conflicts of interest	Other quantitative rules	Ownership concentration limits	Currency matching	Direct limits on foreign investments
	Maximum 5% in property securities of the same issuer. Maximum 1% in loans of a single lender					Direct limits: 5% in foreign investment funds, 65% in OECD equities. Investment in non-OECD equities not permitted.
Canada	- Maximum 10% may be invested in stocks, bonds and notes of one company or person. - Maximum 5% in one individual property.	Permitted, but limited to 10% of the fund's assets. Other conflict rules also apply eg related party rules. Securities must be acquired on a public exchange	25% in real estate and resource (15% in resource).	Funds may own maximum 30% of voting shares of one company	None	Maximum 30% of the fund
Czech Republic	Investment in securities from the same issuer limited to 10% of the fund's assets Bank deposit in one bank is limited to 10% The value of one piece of real estate or one movable assets can not exceed the 5% of the fund assets.	Investment in shares of other pension funds is prohibited	Investment in shares and participation certificates of unit trusts is limited to 25% Mortgage and other loans are not permitted	Pension funds assets can not include more than 20% of the nominal value of shares issued by the same company	None	Foreign investment is permitted only in case of the securities traded in OECD markets
Denmark	Limits for any one investment depending on the sort of assets.	A limit of 2(3) percent of the provisions for investment in any one enterprise (only relevant for company pension funds).	“High-risk assets” (domestic and foreign shares and unlisted securities) limited to 70%. Property and investment-trust holdings limited to 70%.	A limit of 2(3) percent of the provisions for investment in any one enterprise (only relevant for company pension funds). Prohibited to exercise a	Minimum 80%. For EU currencies up to 50% of liabilities can be covered by assets denominated in Euro.	None

	Investment regulation
