3-About I&FF Methodology

Steps in the Sectoral Assessments of I&FF to Address Climate Change

4 - Niger results

I&FF in NIGER : Adaptation in Agriculture sector

Measure1 : Rain crops production improvement

Measure2 : Promotion of crops production under irrigation

Measure3 : Improvement of cattle farming

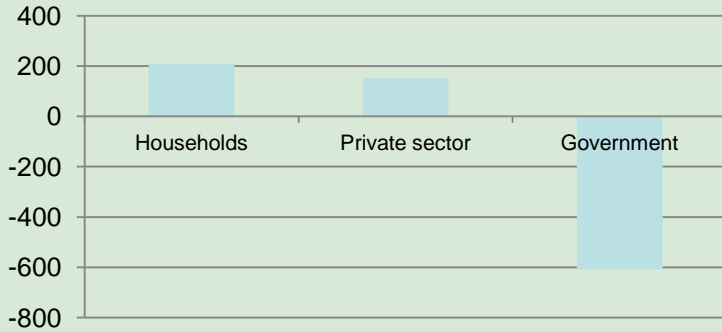

Measure4 : Promotion of intensive cattle farming

**Investment
by Entity**

Niger: WHO invest and where? Where is green and where is not?

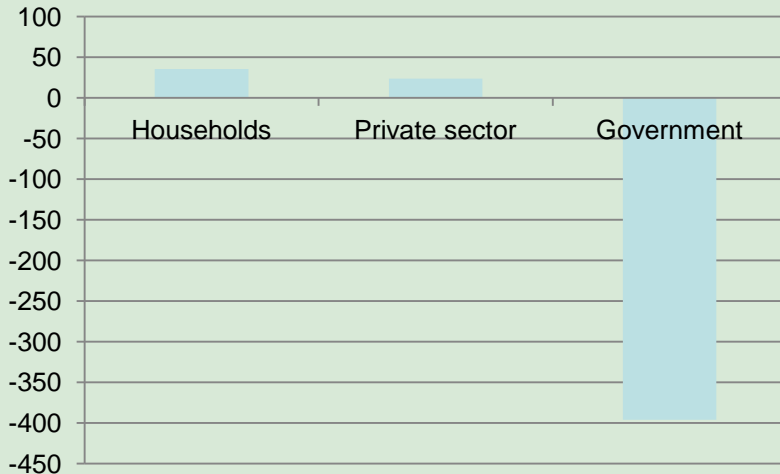

Measure 1 (millions us\$)

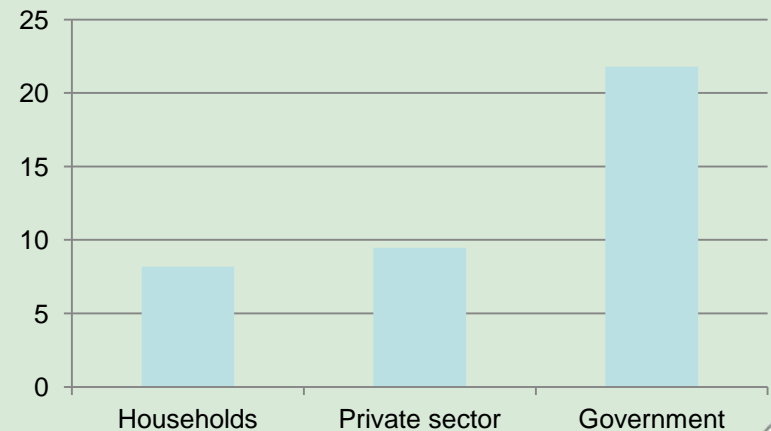

Measure2 (million us\$)

Measure3 (millions us\$)

Measure4 (millions us\$)

**Investment
by Entity**

WHO invest and where or Who is a green investor?

Households (millions us\$)

Private sector (millions us\$)

Government (millions us\$)

Impact on National Politics

Analysis of uncertainties

KEY MAIN ISSUES TO ADDRESS

The I&FF is a tool for decision making for policy makers to orient/direct investments in terms of Adaptation and Mitigation in the different sectors.

The results of the assessment will enable the development of policy options/measures to address climate change.

The results of the assessment must be presented to the political authorities for their consideration in the development of national investment budgets or in any other national planning exercise.
