

PART B Details of ICT collections

Please **copy and complete** the following table for each **distinct** ICT collection (including ICT modules on general collection vehicles).

Include URL links where they: reasonably specific to the question and expected to be fairly stable in an annual timeframe.

Please **do not** insert rows or columns or edit any text in the first column. Thank you.

Name of collection: Use of ICT in the households

Nature of collection If possible, use the classification of collection types shown above e.g. <i>ICT use collection – business</i> . For “other” collections, provide details e.g. <i>Other ICT collection – ISPs</i> .	ICT use collection – Household/individual
Collection agency	Statistics Norway
General references to collection material Metadata, questionnaires etc	http://www.ssb.no/ikthus_en/
Survey basis or vehicle E.g. Labour Force supplement, standalone survey, administrative byproduct data	Statistics Norway's Omnibus survey
Frequency of collection	Annual
Collection history Reference dates and/or periods from the first to the latest collection	http://www.ssb.no/ikthus_en/
Whether collection is mandatory or voluntary	Voluntary
Scope and coverage of collection Target population in terms of size, industry, population groups etc	http://www.ssb.no/ikthus_en/
Main classifications used E.g. industry, size, commodity, occupation	http://www.ssb.no/ikthus_en/
Collection methodology E.g. face-to-face, mail, Web, telephone interview	http://www.ssb.no/ikthus_en/
Reporting and Statistical units Enterprise, establishment, household, etc	http://www.ssb.no/ikthus_en/
Sample frame used	http://www.ssb.no/ikthus_en/
Sampling method E.g. stratified random sampling, cluster sampling	http://www.ssb.no/ikthus_en/
Sample size For the most recent collection	http://www.ssb.no/ikthus_en/
Response rate The responding proportion of the live in-scope population, most recent collection	http://www.ssb.no/ikthus_en/

<p>Methods for dealing with non-response (item and unit) Indicate whether imputations are made for non-response and a short description of methods used.</p>	<p>http://www.ssb.no/ikthus_en/</p>
<p>Weighting of results Weighting method e.g. by employment, number of enterprises, revenue</p>	<p>http://www.ssb.no/ikthus_en/</p>
<p>Relative standard errors (or coefficients of variation) on main aggregates For the most recent collection. These can be expressed as a range of values. For a given variable, the RSE or CV is equal to the ratio of the square root of the estimate of the sampling variance to the estimated value. It can be expressed as a fraction or a percentage.</p>	<p>http://www.ssb.no/ikthus_en/</p>
<p>Known data quality issues with this collection E.g. non-response bias, comparability problems over time, definitional issues, coverage deficiencies, timeliness of frame, high item non-response (identify topics which are particularly problematic).</p>	<p>http://www.ssb.no/ikthus_en/</p>
<p>Output details Please list (or link to) relevant publications for this collection. You can also email relevant files to the OECD.</p>	<p>http://www.ssb.no/ikthus_en/</p>
<p>Other comments</p>	<p>No</p>
<p>Contact/s Where available, provide names and email addresses.</p>	<p>http://www.ssb.no/ikthus_en/</p>
