

# OECD Survey on Household Environmental Behaviour

**ENERGY**

**WATER**

**WASTE**

**TRANSPORT**

**ORGANIC FOOD**

## Objectives

Environmental pressures from households are significant, and their impacts are likely to intensify over the coming years. This OECD project aims at better understanding household environmental behaviour in order to improve policies targeting residential energy use, water consumption, transport choices, organic food consumption, and waste generation and recycling.

## Main phases

As part of the first step of the project, existing empirical evidence on the main drivers of household behaviour in these five environmental policy areas was reviewed. The results were presented at a Workshop and a publication is available (*Household Behaviour and the Environment: Reviewing the Evidence*).

The second stage involves the implementation of a large scale OECD household survey on environmental behaviour in OECD countries. While existing studies generally limit their scope to a single country and focus on a single environmental concern, the questionnaire developed by the OECD covers five key policy areas (energy, waste, food, water and personal transport) and ten countries representing different regions are taking part in the survey: Australia, Canada, Czech Republic, France, Italy, Korea, Mexico, the Netherlands, Norway and Sweden.

Based upon the 2008 survey results, practical policy recommendations will be formulated to design efficient and effective environmental policies targeted at households while addressing social concerns.

As a follow-up step, a new OECD Survey would be carried out in 2010, with a particular focus on the adoption of eco-innovations by households, and the development of a low-carbon economy.

## Timeline

- Pre-testing of the survey in selected countries (2007). [Completed]
- Implementation of the OECD Household Survey on Environmental Behaviour in all 10 countries, with a total sample of 10 000 respondents (January-March 2008). [Completed]
- Analysis of the Survey data by research teams coordinated by the OECD. Households' response to various types of environmental policies are examined (e.g. waste charges, waste recycling services, energy price, energy efficiency labelling, fuel taxes, organic food labelling). Differences in environmental behaviour across households groups (e.g. income, age, household size, education) are analysed as well. Thematic reports will be prepared by research teams based upon the results (2008/2009).
- Presentation of the project results at an international OECD conference (3-4 June 2009) and publication of the conclusions of the Survey.
- Next round of the OECD Survey (2010).

## Research Teams

The project is coordinated by the OECD Environment Directorate, with research teams with extensive experience based in selected participating countries. These include:

- **Catholic University, Piacenza – Italy:**  
Stefano BOCCALETTI (research team leader) – *Organic Food*
- **Charles University in Prague – Czech Republic:**  
Milan SCASNY (research team leader) – *Energy Efficiency*
- **Korean Environment Institute (KEI) – Korea:**  
Kwang-yim KIM (research team leader) – *Waste Generation*
- **SLU University – Sweden:**  
Bengt KRISTRÖM (research team leader) – *Renewable Energy*
- **Statistics Norway - Norway:**  
Bente HALVORSEN (research team leader) – *Gender Issues*
- **The Australian National University – Australia:**  
Quentin GRAFTON (research team leader) – *Water Consumption*
- **Universidad Iberoamericana – Mexico:**  
Alejandro GUEVARA-SANGINES (research team leader) - *Transport*
- **University Panthéon-Sorbonne and INRA – France:**  
Katrin MILLOCK and Céline NAUGES (research team leaders) – *Water Conservation and Water Quality*
- **York University – Canada:**  
Ida FERRARA (research team leader) – *Waste Recycling and Waste Prevention*

## Advisory Committee

In order to ensure the soundness of the survey instrument and the political relevance of the outcome of the work, an Advisory Committee including government representatives from the participating countries was set up in 2007 to help inform this project.

## Project Contributors

- Australian Department of the Environment and Water Resources
- Environment Canada
- Dutch Ministry of Housing, Spatial Planning and the Environment (VROM)
- Federal Ministry for the Environment, Nature Conservation and Nuclear Safety, Germany
- French Ministry of the Environment (MEED)
- Ministry of the Environment, Czech Republic
- Ministry of the Environment and Natural Resources, Mexico (SEMARNAT)
- Ministry of Environment, Republic of Korea
- Norwegian Ministry of the Environment
- Region Emilia Romagna, Italy
- Swedish Energy Agency (STEM)
