

## Composite Leading Indicators signal sharper slowdown in OECD area

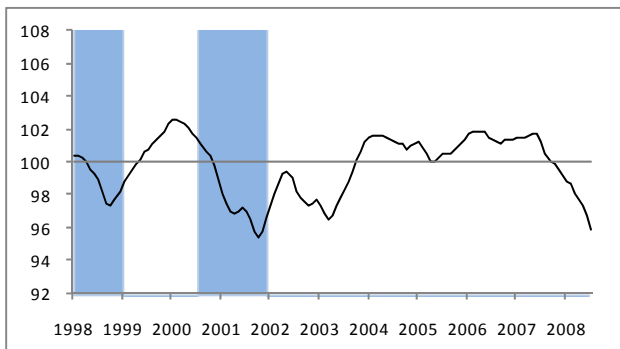

OECD composite leading indicators (CLIs) for June 2008 indicate a continued weakening outlook for all the major seven economies. The latest data for major non-OECD member economies tentatively point to expansion in China and Brazil and a downturn in India and Russia.

The CLI for the **OECD area** decreased by 0.6 point in June 2008 and was 5.0 points lower than in June 2007. The CLI for the **United States** fell by 0.2 point in June and was 5.4 points lower than a year ago. The **Euro area's** CLI decreased by 0.8 point in June and stood 5.2 points lower than a year ago. In June, the CLI for **Japan** stayed unchanged, but was 4.1 points lower than a year ago.

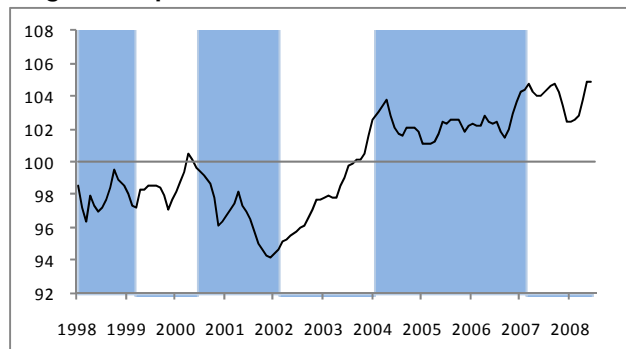

The CLI for the **United Kingdom** fell by 0.8 point in June 2008 and was 4.8 points lower than a year ago. The CLI for **Canada** decreased by 1.1 point in June and was 3.9 points lower than a year ago. For **France**, the CLI decreased by 0.9 point in June and was 5.1 points lower than a year ago. The CLI for **Germany** fell by 0.9 point in June and was 5.4 points lower than a year ago. For **Italy**, the CLI fell by 0.7 point in June and stood 4.5 points lower than a year ago.

The CLI for **China** remained unchanged in June 2008 and was 0.8 point higher than a year ago. The CLI for **India** fell by 1.5 point in May 2008 and was 4.4 points lower than in May 2007. The CLI for **Russia** decreased by 1.2 point in May, but its level was 0.9 point higher than a year ago. In June 2008 the CLI for **Brazil** increased by 2.2 points, and it was 1.4 point higher than a year ago.

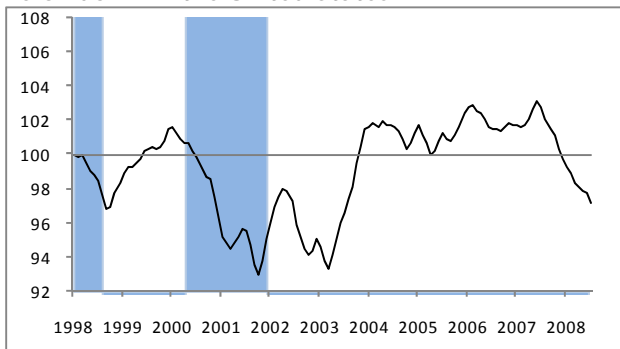

Slowdown in the OECD area

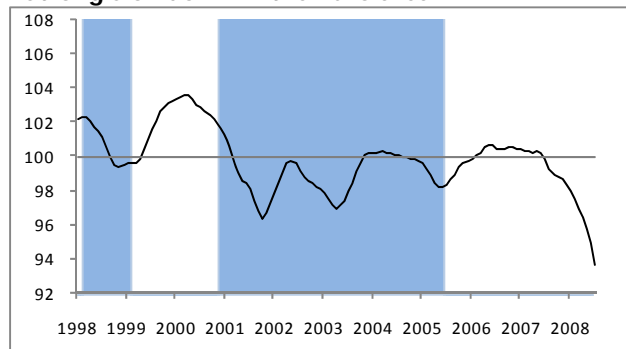

Signs of expansion in China

Slowdown in the United States

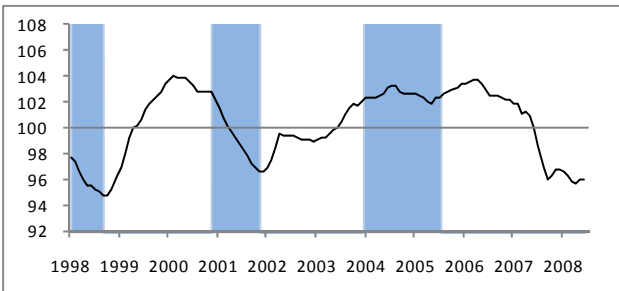

Strong slowdown in the Euro area

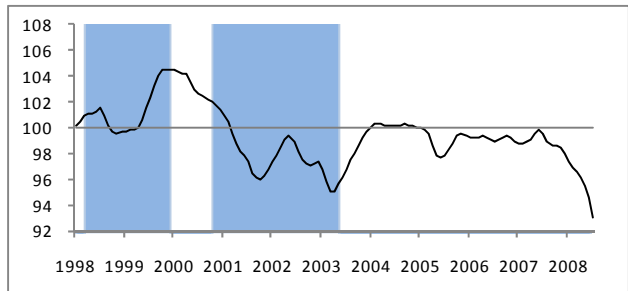

The above graphs show each country's growth cycle outlook based on the CLI which attempts to indicate turning points in economic activity approximately six months in advance. Shaded areas represent observed growth cycle downturns (measured from peak to trough) in the reference series (economic activity).

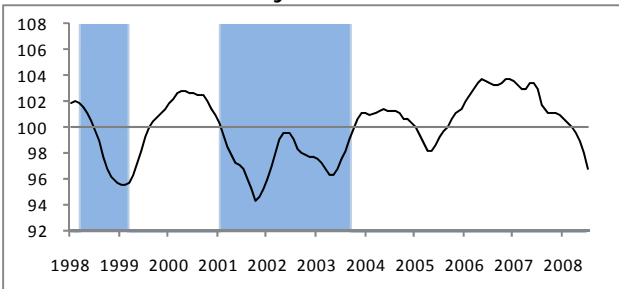

**Slowdown in Japan**

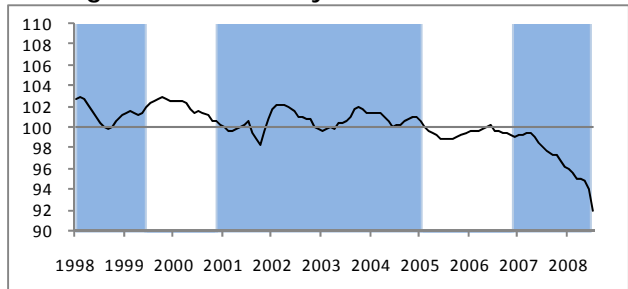

**Strong slowdown in France**

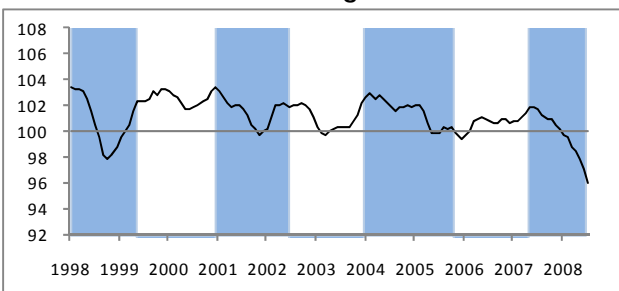

**Slowdown in Germany**

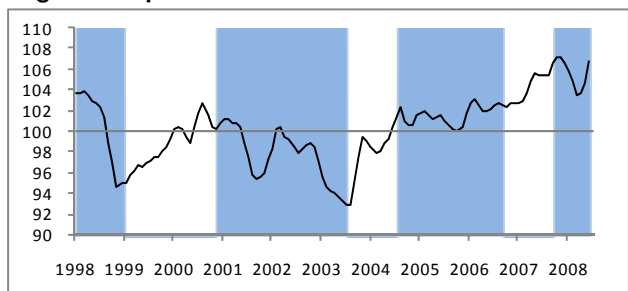

**Strong slowdown in Italy**

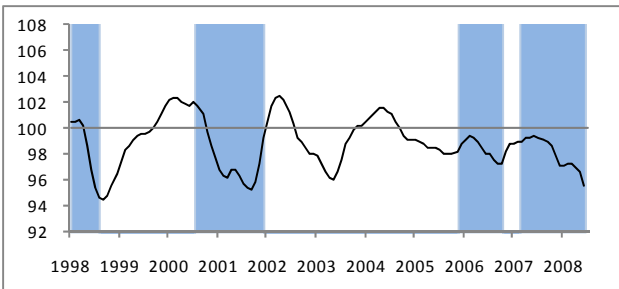

**Slowdown in the United Kingdom**

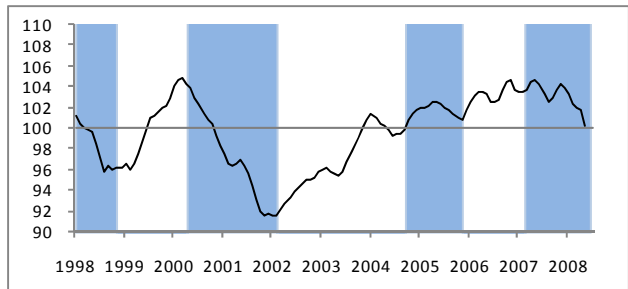

**Signs of expansion in Brazil**

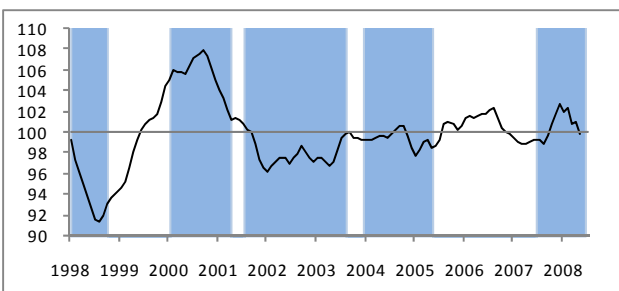

**Slowdown in Canada**

**Downturn in India**

**Downturn in Russia**

The above graphs show each country's growth cycle outlook based on the CLI, which attempts to indicate turning points in economic activity approximately six months in advance. Shaded areas represent observed growth cycle downswings (measured from peak to trough) in the reference series (economic activity).

**Table 1: Composite Leading Indicators**

	Ratio to trend, amplitude adjusted (long term average = 100)					Change from previous month (points)					Year on Year change (points)	Growth cycle outlook**
	2008					2008						
	Feb	Mar	Apr	May	Jun	Feb	Mar	Apr	May	Jun		
<b>OECD Area</b>	98.7	98.1	97.8	97.4	96.8	-0.2	-0.6	-0.4	-0.4	-0.6	-5.0	slowdown

## Methodological Notes

The OECD CLI is designed to provide early signals of turning points (peaks and troughs) between upswings and downswings in the growth cycle of economic activity. The CLI is an instrument of analysis that has to be used carefully. Whilst it has a long-term average = 100, the CLI provides qualitative information on short-term economic movements rather than quantitative measures. Therefore, the main message of CLI movements over time is the direction up or down in the growth cycle where the cyclical phases are defined as follows: expansion – CLI increasing and above 100; downturn – CLI decreasing but above 100; slowdown – CLI decreasing and below 100; recovery – CLI increasing but below 100.

The CLIs are aggregated time series which summarise information contained in a number of key short-term economic indicators known to be linked to GDP. They have been compiled using a modified version of the method developed by the US National Bureau of Economic Research. The CLI system comprises a set of component series selected from a wide range of economic indicators all sharing the common property of indicating swings in future economic activity (224 series are used in total, about 5-10 for each country).

Cyclical turning points are directly captured in the (amplitude adjusted) de-trended or ratio to trend form of the CLI as compiled from its de-trended component series. The monthly change (point) of the CLI provides information on short-term movements while the change (point) from the same month previous year supplies short-term trend information (Table 1). In practice, turning points in industrial production or GDP have been found about six months (on average) after the signals of turning points had been detected in the CLI. The historical performance (lead/lag at turning points) of the CLIs for individual countries and areas are set out in Table 2.

In general, the monthly index of industrial production covering all industry sectors (IIP) is used for the reference series as a proxy measure for quarterly GDP, because historical turning points of IIP have coincided with those of GDP for most OECD countries. Recent confirmed turning points in the reference series are set out in Table 2, where the most recent ones are noted provisional until they have been verified against those of the quarterly GDP. This is done in order to ensure consistency between the final reference chronology and GDP.

Access to time series data and methodological information for *OECD Composite Leading Indicators (CLI)*, *standardised consumer* and *business confidence indicators*, *business tendency survey indicators* by sector and *consumer opinion survey indicators* is provided by the OECD Business Cycle Analysis Database available at the OECD web site at <http://stats.oecd.org/mei/default.asp?rev=2>

The **OECD-Total** covers the following 29 countries: Australia, Austria, Belgium, Canada, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Japan, Korea, Luxembourg, Mexico, Netherlands, New Zealand, Norway, Poland, Portugal, Slovak Republic, Spain, Sweden, Switzerland, Turkey, United Kingdom, and United States.

The **G7 area** covers Canada, France, Germany, Italy, Japan, United Kingdom and United States.

The **Euro area** (only Euro area countries that are members of OECD) covers the following 12 countries: Austria, Belgium, Finland, France, Germany, Greece, Italy, Ireland, Luxembourg, the Netherlands, Portugal, and Spain.

The **Major Five Asia area** covers China, India, Indonesia, Japan and Korea.
