

Risk Awareness and Education Initiatives and Programmes Developed in Japan: Summary

by Norio OKADA, Professor, DPRI, Kyoto University

- Good practices can be more disseminated through publication and marketing by customerized disaster reduction industry.
- Roles of academics and educators need to be stressed.
- Know-hows to set up effective platforms for risk communication need to be formalized
- Timing-engine knowhows need to be more highlighted.
- Architecturing governance schemes to frame knowhows is also studied.
- Asian countries should collaborate and share good practices. (e.g. Disaster Hyperbase Project by Japan)
