**INVESTMENT POLICY REVIEW OF THE RUSSIAN FEDERATION
Strengthening the Policy Framework for Investment**

Executive Summary

The Investment Policy Reviews are an integral part of the Investment Committee's work programme and co-operation with non-Members. They seek to facilitate dialogue, share experience and build expertise among the partner countries and OECD members. The 2008 Investment Policy Review of the Russian Federation examines developments in the country's investment flows and policy since the last OECD Review published in 2006.¹ It analyses Russia's energy investment policy against various aspects of the Policy Framework for Investment and considers corporate responsibility practices of large Russian companies.

In 2007 **Russia's international investment flows** reached the highest levels recorded so far. With estimated USD 48 billion of foreign direct investment (FDI) inflows and a similar amount invested by Russian enterprises abroad, Russia counts now among the world largest recipients and sources of FDI. Russia's FDI stock has considerably increased and the degree of FDI penetration has become comparable to other emerging market economies. Inward investment originates from a relatively few partner countries and is concentrated in the primary sector, manufacturing and traditional services such as trade and repair. Russia's potential for attracting further foreign investments is significant giving its abundant natural resources and large and dynamic domestic market. The motivations of Russian enterprises investing abroad have considerably evolved in recent years. They now aim at internationalising their activities and controlling their value chains. This trend which concerns both state-controlled and large private enterprises is likely to continue in future.

A strengthening of state control has characterised Russia's recent economic development and has important implications for foreign investors. The decision to postpone a long-awaited **law on strategic sectors** means that the establishment of foreign investors in a range of sectors continues to be approved on

¹ OECD Investment Policy Review of the Russian Federation: "Enhancing Policy Transparency", Paris 2006.

an *ad hoc* basis. Best practice among OECD countries considers that in such laws the strategic sectors should be narrowly defined and the restrictions on foreign investment in domestic companies should be of limited scope. Such laws should also provide for transparent and predictable modalities of government review and authorisation procedures. Another recent phenomenon is the emergence of large state-controlled conglomerates which have been established in a number of sectors and enjoy dominant market positions. The scope and modalities of private sector participation, including by foreign investors, in these conglomerates are tightly controlled. An approach offering more opportunities for a positive contribution by the private sector and for beneficial competition would be better aligned with the government's declared strategy of modernising and enhancing the competitiveness of the Russian economy.

The overview of Russia's **energy investment policy** shows a significant heterogeneity in the policy approach adopted in the energy sector. While the state has strengthened its ownership and managerial control over oil and gas upstream activities and energy transport, the reform in the electricity sector has been actively pursued through the unbundling process associated with partial privatisation. Implementing a coherent energy investment policy framework is critical to cope with Russia's huge energy investment needs and sector-specific challenges, in particular volatility of world energy prices, significant sunk costs and usually long-term returns on investment. Several policies appear to be essential: accelerate the alignment of domestic energy prices with production costs, secure property rights, improve transparency of the tax regime and procedures, ensure effective competition policy and strengthen the independence of sectoral regulators. Maintaining the vital role of Russia's energy sector for the domestic economy and external economic relations thus depends not only on geological reserves and technological capacities but also on a sound energy investment policy framework enabling to attract adequate investment.

Responsible business practices have become an increasingly important element in evaluating countries' investment environment. As documented by OECD research, general awareness of international standards of corporate responsibility has been relatively low in Russia not only compared to OECD countries but also other emerging markets. The situation seems to be changing rapidly in conjunction with external exposure of large Russian enterprises. Recent studies indicate that large Russian enterprises have started to catch up with their counterparts in OECD and other emerging market economies. They now publish relatively detailed annual reports and provide information on their websites, including for instance on compliance with environmental standards. However, large Russian firms still give comparatively limited information on their adoption and observance of codes of conduct and management systems in place to promote business ethics. Dissemination of responsible business practices can boost Russia's creditworthiness and reliability as inward and outward investor.

The Annex summarises the results of recent comparative **business surveys of the Russian investment climate**. Despite Russia's growing investment attractiveness evidenced by increased FDI inflows, the country's business climate is still perceived uncertain and less favourable than in some other emerging markets. While expected high returns in the natural resources sector may make large foreign investors less sensitive to traditional investment barriers and explain a part of large FDI inflows recorded, the surveys report a number of factors which affect investors' perceptions, notably the persistence of regional disparities in business conditions and difficulties experienced by some categories of firms, especially small and medium-sized enterprises and exporters in obtaining information and in the face of regulatory uncertainty.

TABLE OF CONTENTS

1. RECENT TRENDS IN INTERNATIONAL INVESTMENT IN RUSSIA
 - 1.1. Developments in Russia's international investment in 2006 – 2007
 - 1.2. Russia's foreign direct investment flows in international comparison
 - 1.3. Russia's potential to attract foreign investment
 2. RUSSIA'S "STRATEGIC" SECTORS AND CORPORATIONS
 - 2.1. Law on strategic sectors
 - 2.2. "Strategic" corporations under state control
 - 2.3. Summing up
 3. RUSSIA'S POLICY FRAMEWORK FOR ENERGY INVESTMENT
 - 3.1. Investment policy
 - 3.2. Investment promotion and facilitation
 - 3.3. Trade policy
 - 3.4. Competition policy
 - 3.5. Tax policy
 - 3.6. Other policy areas relevant for Russia's energy investment policy
 - 3.7. Summing up
 4. RESPONSIBLE BUSINESS CONDUCT IN RUSSIA
 - 4.1. Russia's starting point in adoption of responsible business conduct practices
 - 4.2. Recent progress
- ANNEX. OVERVIEW OF RECENT BUSINESS SURVEYS
1. International comparisons
