

Dawn Nafus is an anthropologist Intel, where she conducts social science research to inspire new products and strategies. She holds a PhD in Anthropology from Cambridge University, and was previously a research fellow at University of Essex. She has published widely on communication technology and society in academic journals, and worked with both public policy makers and industry leaders on issues such as widening participation in open source communities and knowledge transfer policies for local economic development. Her recent work has focused on how patterns of mobility and their social meanings affect technology usage. She is also working on a interdisciplinary project combining statistical modeling and social theory to explain cases of accelerated adoption rates at the national level. Her areas of regional expertise are Russia and the UK.
