

Transport Statistics

Transport Statistics

Annual Transport Statistics

Purpose

To provide an annual publication presenting main statistical data in the transport sector.

Objectives and outputs

Data are collected in a harmonised way to facilitate comparisons between modes of transport and between countries by means of a questionnaire common to three international organisations: Eurostat, ITF and UNECE.

All main transport variables, compiled in a harmonised way, are presented in one publication, in order to allow comparisons between historical series. For each variable, the publication shows historical series for every ITF member country. Data cover topics such as investment, infrastructure, rolling stock, human resources, traffic and energy consumption for different inland transport modes.

Non-member countries involved in the activity:

Albania, Armenia, Azerbaijan, Belarus, Bosnia and Herzegovina, Bulgaria, Croatia, Estonia, Georgia, Latvia, Liechtenstein, Lithuania, Macedonia, Malta, Moldova, Romania, Russian Federation, Serbia and Montenegro, Slovenia, Ukraine

Databases

Transport Statistics - Common Questionnaire

Main Developments for 2009

General aspects:

Due to co-ordination problems between the three international organisations (Eurostat, ITF, UNECE) this publication has been put on hold. The new WEB data collection developed by Eurostat should improve the whole process and allow for a new publication in 2009, which will include road accident statistics.

Data collection:

Upgraded version of the WEB questionnaire

Transport Statistics

International Database of Taxes and Charges for Road Freight Transport

Purpose

To provide indicators for efficiency and impact on competition of taxes and charges for transport in order to allow international comparisons.

Objectives and outputs

The final report provides a framework for international comparisons and discusses the economic principles for efficient systems of taxation. It provides a basis for addressing the questions "what is the right level for transport taxes" and "what kinds of charges should be used".

Main Developments for 2009

General aspects:

No major changes.

Transport Statistics

Investment in Transport Infrastructure

Purpose

To provide an annual update of statistical information in transport infrastructure investment, for all ITF countries, on total gross investment and maintenance expenditure.

Objectives and outputs

After processing the data, quality checks were carried out to select reliable time series to be made available on the web site along with a short analysis of trends.

Compared to previous years the questionnaire has been simplified to improve data quality and processing procedures.

Non-member countries involved in the activity:

Albania, Armenia, Azerbaijan, Belarus, Bosnia and Herzegovina, Bulgaria, Croatia, Estonia, Georgia, Latvia, Liechtenstein, Lithuania, Macedonia, Malta, Moldova, Republic of Montenegro, Republic of Serbia, Romania, Russian Federation, Slovenia, Ukraine

Databases

Investment in Transport Infrastructure

Main Developments for 2009

General aspects:

Data will be made available on the web site along with an analytical report.

Transport Statistics

Quarterly Transport Statistics

Purpose

To provide harmonised information on selected basic quarterly indicators in order to compare the latest inland transport trends between countries.

Objectives and outputs

To publish results every three months on the ECMT web site, on a country by country basis with six month lags maximum (data for the first quarter is published in September). Available series cover good transport in T-km, passenger transport in P-Km, road traffic in V-Km, brand new vehicles registration, car fuel consumption, road fatalities, imports and exports at current prices and industrial production.

Country by country data tables are available for the last five years, as well as graphs showing trends for both individual countries and selected groups of countries.

Non-member countries involved in the activity:

Albania, Armenia, Azerbaijan, Belarus, Bosnia and Herzegovina, Bulgaria, Croatia, Estonia, Georgia, Latvia, Lithuania, Macedonia, Malta, Moldova, Republic of Montenegro, Republic of Serbia, Romania, Russian Federation, Slovenia, Ukraine

Databases

Short-term trends survey

Main Developments for 2009

General aspects:

Starting with the publication of the 4th quarter of 2008, an analytical report will be published once a year and presented at the ITF annual Forum organised in Leipzig each year.

Transport Statistics

Transport Sector Trends Analysis

Purpose

To provide a first analysis of both passenger and freight transport trends, as well as road accident trends. A short list of selected indicators are collected for that purpose.

Objectives and outputs

To publish an analysis of the transport situation in different geographical regions. The publication also gives the latest statistics on the situation of the transport market in ITF countries and presents charts which help to show what changes have occurred since 1970.

Because it is published earlier than any other comparable study, this report provides first-hand figures about passenger and freight transport as well as road accidents.

Non-member countries involved in the activity:

Albania, Armenia, Azerbaijan, Belarus, Bosnia and Herzegovina, Bulgaria, Croatia, Estonia, Georgia, Latvia, Liechtenstein, Lithuania, Macedonia, Malta, Moldova, Republic of Montenegro, Republic of Serbia, Romania, Russian Federation, Slovenia, Ukraine
