

## OECD Composite Leading Indicators reach new low

The OECD composite leading indicators (CLIs) for January 2009 continue to point to a weakening outlook for all the major seven economies, with the OECD total falling again to a new low and little clear indication of stabilization soon. The outlook has also continued to deteriorate in the major non-OECD member economies, particularly Brazil, which now joins China, India and Russia, in the strong slowdown group.

The CLI for the **OECD area** decreased by 0.9 point in January 2009 and was 9.1 points lower than in January 2008. The CLI for the **United States** fell by 1.4 point in January and was 10.8 points lower than a year ago. The **Euro area's** CLI decreased by 0.6 point in January and stood 8.4 points lower than a year ago. In January, the CLI for **Japan** decreased by 1.5 point, and was 9.6 points lower than a year ago.

The CLI for the **United Kingdom** fell by 0.3 point in January 2009 and was 6.7 points lower than a year ago. The CLI for **Canada** decreased by 1.0 point in January and was 8.6 points lower than a year ago. For **France**, the CLI decreased by 0.2 point in January and was 5.2 points lower than a year ago. The CLI for **Germany** fell by 1.2 point in January and was 12.7 points lower than a year ago. For **Italy**, the CLI fell by 0.1 point in January and stood 5.3 points lower than a year ago.

The CLI for **China** decreased 2.1 points in January 2009 and was 14.8 points lower than a year ago. The CLI for **India** fell by 1.0 point in January 2009 and was 9.6 points lower than in January 2008. The CLI for **Russia** decreased by 3.3 points in January and was 19.4 points lower than a year ago. In January 2009 the CLI for **Brazil** decreased by 2.7 points and was 10.1 points lower than a year ago.

**Strong slowdown in the OECD area**

**Strong slowdown in China**

**Strong slowdown in the United States**

**Strong slowdown in the Euro area**

The above graphs show each country's growth cycle outlook based on the CLI which attempts to indicate turning points in economic activity approximately six months in advance. Shaded areas represent observed growth cycle downturns (measured from peak to trough) in the reference series (economic activity).

**Strong slowdown in Japan**

**Strong slowdown in France**

**Strong slowdown in Germany**

**Strong slowdown in Italy**

**Strong slowdown in the United Kingdom**

**Strong slowdown in Brazil**

**Strong slowdown in Canada**

**Strong slowdown in India**

**Strong slowdown in Russia**

The above graphs show each country's growth cycle outlook based on the CLI, which attempts to indicate turning points in economic activity approximately six months in advance. Shaded areas represent observed growth cycle downswings (measured from peak to trough) in the reference series (economic activity).

## Methodological Notes

### Purpose

The OECD CLI is designed to provide early signals of turning points in business cycles – fluctuations of economic activity around its long term potential level. The approach, focusing on turning points (peaks and troughs), results in CLIs that provide qualitative rather than quantitative information on short-term economic movements. Four cyclical phases form the basis of this qualitative approach: *expansion* – CLI increasing and above 100; *downturn* – CLI decreasing and above 100; *slowdown* – CLI decreasing and below 100; *recovery* – CLI increasing and below 100. Although the CLIs attempt to predict movements in the output gap, they should not be interpreted as providing exact forecasts.

### Reference Series

OECD CLIs are constructed from economic time series that have similar cyclical fluctuations to those of the business cycle but which precede those of the business cycle. Typically movements in GDP are used as a proxy for the business cycle but, because they are available on a more timely and monthly basis, the OECD CLI system uses instead indices of industrial production (IIP) as proxy reference series. Moreover despite their tendency towards higher volatility historical turning points of IIPs coincide well with those of GDP for most OECD countries. Table 2, above, shows recent turning points in the reference series and these are marked provisional until they have been verified with the turning points of de-trended quarterly GDP estimates.

### Summary Methodology

The OECD CLIs are composite indicators: with components that target the early stages of production, respond rapidly to changes in economic activity, are sensitive to expectations of future activity or are control variables that measure policy stances. All components are passed through a series of filters before aggregation (seasonal adjustment, trend-removal, smoothing and normalisation). The composite indicator is constructed to: preserve the leading properties of the components, have more stable lead times, and have fewer missed or extra turning-points when compared to the reference series than the components alone. The historical performance (lead/lag at turning points) of the CLIs for individual countries and areas are set out in Table 2.

More information on methodology is available in the following document: "[OECD system of composite leading indicators](#)".

### Data

A large set of component series, selected from a wide range of economic indicators, are used in constructing CLIs (224 series are used in total, about 5-10 for each country). CLIs are calculated for 29 OECD countries and 9 zones. They are calculated in three forms: amplitude adjusted, trend-restored, and year-on-year growth rate. These are comparable, respectively, with the de-trended reference series, the original reference series and the year-on-year growth rate of the reference series. The press release focuses on the amplitude adjusted form of the CLI, and includes the major countries and zones.

Access to time series data and methodological information for OECD *Composite Leading Indicators* (CLI) and *Consumer and Business Confidence Indicators* is provided by the OECD Business Cycle Analysis Database available at the OECD web site at <http://stats.oecd.org/mei/default.asp?rev=2>

The **OECD-Total** covers the following 29 countries: Australia, Austria, Belgium, Canada, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Japan, Korea, Luxembourg, Mexico, Netherlands, New Zealand, Norway, Poland, Portugal, Slovak Republic, Spain, Sweden, Switzerland, Turkey, United Kingdom, and United States.

The **G7 area** covers Canada, France, Germany, Italy, Japan, United Kingdom and United States.

The **Euro area** (only Euro area countries that are members of OECD) covers the following 12 countries: Austria, Belgium, Finland, France, Germany, Greece, Italy, Ireland, Luxembourg, the Netherlands, Portugal, Slovak Republic and Spain.

The **Major Five Asia area** covers China, India, Indonesia, Japan and Korea.

This Press Release can be found on the OECD web page, see [OECD Internet Site](#)
