FOREWORD

This is the first edition of a publication on statistics of international trade in services broken down by partner country by the Organisation for Economic Co-operation and Development (OECD). There has been a growing interest in monitoring trade in services around the world, which is partly associated with ongoing trade negotiations and is partly due to the increasing weight of services in OECD economies. This publication was developed to address some of the data needs of trade analysts.

The new Manual on Statistics of International Trade in Services (MSITS)¹ describes partner country data needs as follows:

“There is a need for detailed geographical allocations of the statistics on the various types of services supplied and consumed by each economy according to the country of residence of trading partners. Such statistics give a firm basis for the multilateral and bilateral trade in services negotiations that are carried out under the General Agreement on Trade in Services (GATS), that reveal developments in patterns of trade by type of service, and that are important for a variety of analytical purposes. Bilateral comparisons of one country’s data with those of a trading partner, through the use of mirror statistics, are an important tool for investigating and improving data quality. To the extent possible, an identical geographical basis should be used for all related sets of international services statistics (including Foreign Affiliates Trade in Services statistics - FATS).

Thus, ..., it is recommended that statistics on international trade in services be compiled on an individual trading partner basis, at least at the level of the 11 major components of the fifth edition of the International Monetary Fund Balance of Payments Manual classification of services, and where possible at the more detailed Extended Balance of Payments Services (EBOPS) classification level. The production of these statistics is one of the core elements recommended in this Manual, and data collection by trading partner should, if practicable, be developed concurrently with the development of data collection at the EBOPS level. It is recognised that, depending on the data collection methods used, it may be very resource-intensive and difficult for compilers to develop statistics by trading partner.

Given the obstacles, such as disclosure or incomplete information, to providing a complete detailed geographic breakdown of trade in services, this Manual recommends that statistics should be compiled at a detailed partner country level where compilers identify such statistics as being of most relevance in their economies. This means that countries should give priority to detailing their trade in services with their main trading partners.”

¹ The Manual on Statistics of International Trade in Services, which has been approved by the United Nations Statistics Commission, is at the time of writing being edited by the United Nations Statistical Division for a joint publication by the United Nations, the International Monetary Fund, the OECD, the European Commission, the United Nations Conference on Trade and Development and the World Trade Organization. The final unedited version of the Manual is available at the following address:
www.oecd.org/std/trade-services.

The aim of this publication is to assemble and disseminate total trade in services data (balance of payments basis) for the OECD Member countries at the most detailed partner country level available. **Total** transactions of services between residents of the reporting country and non-residents are broken down by partner country. It complements the information provided in the joint OECD-Eurostat publication “OECD Statistics on International Trade in Services” which presents balance of payments data by type of service at the most detailed level available.

The publication itself and the presentation of data in this first edition are regarded as somewhat experimental and readers comments on the presentation, usefulness and quality of the data would be welcome. It is planned to progressively expand the detail in future publications.

The OECD Secretariat is very grateful to Member country experts and Eurostat who have kindly provided much information and many comments during the preparatory phase of this publication.

INTRODUCTION

This publication provides total trade in services data broken down by partner country, according to a common methodology and framework. Data broken down by partner country are currently available for 22 OECD Member countries, at varying levels of details. Data for at least the main trading partners for each declaring country are provided. Statistics refer to the data available to the OECD on 15 May 2002².

The trade in services data are based on the concepts and framework of trade in services set out in the fifth edition of the International Monetary Fund (IMF) Balance of Payments Manual (BPM5). Total services cover transportation, travel, communications, construction, insurance, finance, royalties and license fees, other business services, personal, cultural and recreational services and government services³.

Regarding statistics of trade in services by partner country the Manual on Statistics of International Trade in Services (MSITS) suggests three levels of detail for international collection of trade data by partner country:

- For total services - core recommendation
- For 11 main types of service as set out in BPM5 - core recommendation
- For Extended Balance of Payments Statistics classification (EBOPS): full detail by type of service - desirable as far as possible

This publication responds to the first level of detail requested in the recommendations regarding trade in services data broken down by partner country. The database for the partner country data is still under construction. Consequently all data received have not yet been processed. Work is proceeding to incorporate data on trade in transport, travel and other services.

The OECD Secretariat has obtained data broken down by partner country for 22 of its Member countries plus aggregates for the European Union (EU), the euro area and European Union institutions; and is aware that some data are available for 2 non-member countries (Estonia and Lithuania). These 22 OECD countries accounted for about 74% of world service exports and 70% of world services imports. The OECD acknowledges the important role of Eurostat in developing harmonised partner country data in the European Union and some other European countries over recent years. A summary of countries for which such data are available is provided in table 1. The Hong Kong statistical office also informed the OECD Secretariat that they intend to start partner country data collection in the near future.

It should be noted that no country publishes trade in services data for all partner countries. Table 2 sets out the number of partner countries and zones available for each country's total trade in services. In general about 60 partner countries seem to be the maximum detail available. This limit to the number of

² For France, data available on 30 March 2002 and for Canada on 5 July 2002.

³ For more information on the coverage and definitions of services, please refer to the introduction of the joint OECD-Eurostat publication "OECD Statistics on International Trade in Services", at www.oecd.org/std/trade-services.

countries relates to either limitations of accuracy imposed by thresholds or sample surveys or that respondents cannot distinguish their trade with all countries or confidentiality constraints. It also results in geographic zone estimates being used, which cannot necessarily be calculated from country returns, so the choice of zones and their precise definition will need further attention in order to achieve maximum international comparability of data.

Presentation of the publication

This statistical publication is divided into two sections:

Section A: Summary tables and analysis contains tables showing estimated patterns of world and OECD trade in services and the top seven trade in services partners for the reporting countries included in this report. It also presents charts showing for the European Union, Japan and the United States the breakdown of total services exports (credits) and imports (debits) according to their trading partners (main partners and regional groupings).

Section B: Country tables including data for the 22 OECD Member countries for which partner country information is available. This initial presentation provides data on service exports and imports by country with over 55 partner countries plus continents and geographic/economic regional groupings (see Annex for definitions of geographic and economic groupings shown) for trade in services as a whole. Countries were requested to submit data at the most detailed level possible of trading partners. For non-OECD partners, a residual item is provided for each geographic zone which refers to not elsewhere specified (n.e.s.) trading partners of these zones. Data are provided for two years (1999 and 2000) and are expressed in U.S. dollars (USD). The exchange rate used for conversion from national currency to USD, when data is reported by countries in their national unit of account, is given at the bottom of the notes page for each country. It corresponds to the annual averages of market exchange rates and official exchange rates for countries quoting rates in units of national currency per USD. The exchange rates are taken from the IMF "International Financial Statistics database".

The presentation of data has been aligned as far as possible by the Eurostat and OECD trade in goods nomenclatures, by the patterns of trade in services indicated in the returns and by wider World Trade Organization / IMF published data. The form of the presentation corresponds broadly to the OECD trade in goods presentation. The partner countries identified are the OECD Member countries plus the more important service trading countries as a whole and for each continent. Another factor in the choice is which countries are identified by the reporting countries.

At present geographical groupings used by individual countries and international organisations vary in their definitions and further work may be needed to see what scope there is to harmonise them. This becomes more important in trade in services where there is little chance of countries reporting trade by every partner country.

Statistics shown in this document mainly follow Eurostat's Balance of Payments Geonomenclature. This is due to the large number of OECD countries (European Union member states and candidate countries) reporting data according to Eurostat's recommendations. Many notes in this document therefore refer to discrepancies between Eurostat's geographical nomenclature and national classifications. However, Member countries, the OECD (trade in goods) or other organisations have a geographical nomenclature which may differ from Eurostat's. Further work is needed in future in order to build a geographical nomenclature suitable for increasing the comparability between various data sets.

Data for countries are published by national statistical agencies or central banks; or by Eurostat through their data collection; or both nationally and by Eurostat. The source of the data presented in this publication is indicated on the notes page of each country.

The aim in this publication has been to maximise partner country detail. Achieving this has introduced some minor inconsistencies with previously published data. About half the country tables are not entirely consistent with the published OECD-Eurostat data (“OECD Statistics on International trade in Services”). The possibility of inconsistencies between the national presentations of partner country data and the OECD database presentation exists in at least some cases. These inconsistencies may be due to timing, minor conceptual differences, Eurostat adjustments/estimates, national revisions, and differing classifications.

In the case of some European countries it represents small differences in concepts between Eurostat and national reporting. For all of the European Union countries, a note indicates whether the data shown are completely consistent with EU / euro area aggregates.

Zone total available

SECTION A

Summary Tables and Analysis: Main Trading Partners

The following section contains summary and analytical tables showing estimated patterns of world and OECD trade in services and, for each declaring country, the seven main trading partners in 2000. This section also contains charts for the European Union, Japan and the United States, showing the breakdown (five main partners and total geographic zones) for their respective service exports and imports. Footnotes concerning the series by country may be found in the individual country notes in Section B, as appropriate.

Estimated patterns of world and OECD trade in services

OECD countries accounted for approximately three quarters of the destination of world service exports in 2000 it is estimated from reported export data. Intra-OECD exports actually accounted for some 80% of the total OECD exports (ranging from 61% of Australia's exports to over 90% for a number of reporting OECD countries). The European Union is the largest region of destination of OECD exports (34% of world service exports) followed by NAFTA (17% of world service exports). Intra-EU trade largely accounts for this dominant position of the EU in OECD compared to other OECD regions. The OECD Asia and Oceania countries mainly trade with Asian (over three per cent of world exports) and American (three per cent of world exports) countries. Africa's main region of destination for service exports is Europe (over half of service exports, mainly to the European Union). Three per cent of total world service exports go to Africa.

With respect to the trade of individual OECD countries, the two main partners in 2000 for exports and imports of services are the European Union and the United States for all but three reporting countries. The exceptions are Korea (main partners: United States and Japan), Slovak Republic (European Union, followed by Russia for exports and by Czech Republic for imports) and Sweden for exports (European Union followed by Norway). For the European Union as a whole the main partners are the United States and Switzerland and for the United States they are EU and Japan.

For Canada and European reporting countries, the two main partners account for between 60 and 90% of their total trade, whereas for Japan and Korea the two main partners account for approximately 50% of their trade and 40% for Australia. A large proportion of Australia, Japan and Korea's trade is with China and the 'dynamic' Asian countries, and New Zealand (for Australia). Of United States' trade the European Union and Japan account for approximately 45%, and the NAFTA partners of the United States (Canada and Mexico) account for approximately 13 to 14%.

The matrix below presents estimated broad aggregate patterns of world and OECD trade in services in 2000. It is built on the basis of information available to the OECD at the time of publication and the estimates will be revised in future when more information becomes available. These estimates are primarily based on reported data on exports of services available to OECD (71% of world exports*). Where export data are not available the corresponding partner countries' imports figures ("mirror" exports statistics) are used as estimates, which takes coverage to about 86% of world exports. Users need to be aware that "mirror" exports may not always reflect the corresponding export that would actually be declared by the reporting country, which leads to some data inconsistencies. Information was complemented as necessary using the 1995 estimated shares from the services bilateral exports matrix used for OECD's international macroeconomic model Interlink (see "Trade linkages and the trade matrices in the OECD Interlink model", Economics Department working papers n°310, ECO/WKP(2001)36, OECD, www.oecd.org/eco/working_papers).

Europe	717.4	86.9	98.0

Source: OECD, IMF.

* Only refers to declared exports to identified countries or geographic groupings.

** Estimates mainly (entirely for Africa) based on reported mirror data, therefore subject to greater uncertainty.

*** The OECD Secretariat judged that mirror data for America (excluding the United States and Canada) did not match sufficiently well the service exports of this region, as reported to the IMF, for the purposes of estimating trade patterns.

Quality

Although the quality of mirror statistics for total trade in services is variable between pairs of countries, at the level of regional groupings and major players we judge the quality to be fair overall, but the following examples are illustrative of the kind of discrepancies that can exist. E.g. United States service exports to EU in 2000 were 93 billion USD while EU imports of services from the US were 109 billion USD. Japan's service exports to the EU were 11.6 billion USD while EU imports from Japan were 9.4 billion USD. United States exports to Japan were 35 billion USD while Japan's imports from the United States were reported as 38 billion USD. These kinds of variations should be born in mind when considering the estimates.

A number of estimated trade flows are presented in italics in the table above, where there is insufficient directly reported data or the proportion of mirror data is high or the OECD Secretariat judged that these figures were subject to greater uncertainty. This is illustrated in the second table. The services export share for the regions *Asia and Oceania*, and *OECD Europe other* were mainly estimated using "mirror" statistics. Africa's export shares are entirely based on mirror statistics. However it was also judged that such broad estimates based on existing reported data make a useful starting point to understand the services trade flows and to base more refined estimates as more information becomes available in future years.

Reading the tables

Reading the first table: for illustrative purposes, an estimated 5.3% of world service exports were exported by OECD Asia and Oceania countries to OECD countries and 2.7% of world service exports were exported by OECD Asia and Oceania countries to NAFTA countries. An estimated 3.4% of world service exports were exported by OECD Asia and Oceania to Asian or Oceanian countries (whether or not in OECD).

Reading the second table: 33.4% of Asia and Oceania countries reported exports are accounted by direct reporting of partner country exports from Japan, Korea and Australia. If reported mirror imports are used to plug the gaps the total coverage nearly doubles to about 65.6%, leaving 34.4% of Asia and Oceania's service exports unaccounted for and thus presumed to be destined for countries outside our 22 reporting countries. The high proportion of mirror statistics makes the precise proportions less reliable as it does any trade flows estimated from these.

Top seven trade in services partners of OECD countries in 2000 by reporting country

Table built on the basis of information available to the OECD.

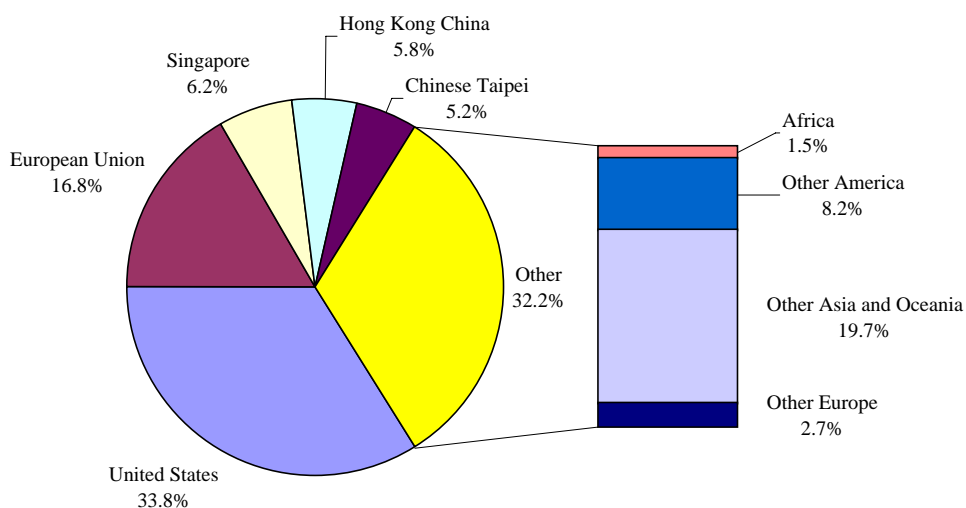

- (1) Data for Australia refer to fiscal years (1st July 1999 - 30 June 2000).
- (2) Excluding Slovak Republic
- (3) Excluding Unspecified which mainly refers to Travel.
- (4) Data refer to private services.
- (5) Excluding Czech Republic, Hungary, Iceland, Poland, Slovak Republic and Turkey.

Services imports trading partners, 2000

SECTION B

Country Tables

This section includes data for 1999 and 2000 for the 22 OECD Member countries, the European Union, Eurozone and European Institutions for which partner country information is available. It provides data on service exports and imports by country with over 55 partner countries plus continents and geographic/economic regional groupings (see Annex for definitions of geographic and economic groupings shown) for trade in services as a whole. For non-OECD partners, a residual item is provided for each geographic zone, which refers to not elsewhere specified (n.e.s.) trading partners of these zones.

Source:

U.S. Department of Commerce, Bureau of Economic Analysis (BEA)

Website:

www.bea.gov

National reference publication:

Survey of Current Business (SCB). Articles on U.S. International Transactions appear in the January, April, July, and October issues of the SCB. Annual revisions are published in July. Added detail on private services transactions, together with a description of sources, methods and available data is presented in the SCB in an annual article on U.S. International Services, Cross-Border Trade in 2000 and Sales through Affiliates in 1999, usually in the October or November issue.

Notes:

Two tables are provided for the United States: the first one presents data for total services and the second one shows data for total private services (i.e. excluding government services).

Notes related to the country breakdown:

- (1) Unallocated includes International organisations.
- (2) Total Asia and Oceania includes Total Africa.
- (3) Turkmenistan and Uzbekistan are included in Europe.

Publication nationale de référence :

Survey of Current Business (SCB). Les articles sur les Échanges internationaux des États-Unis (U.S. International Transactions) sont inclus dans les SCB de janvier, avril, juillet et octobre. Les révisions annuelles sont publiées en juillet. Des données additionnelles concernant les transactions privées de services, ainsi qu'un descriptif des sources, des méthodes et des données disponibles, sont publiées dans un article du SCB intitulé « Services internationaux des États-Unis, échanges extérieurs en 2000 et ventes au travers des filiales en 1999 » (U.S. International Services, Cross-Border Trade in 2000 and Sales through Affiliates in 1999) normalement inclus dans l'édition d'octobre ou de novembre.

Notes :

Deux tableaux sont présentés pour les États-Unis: le premier montre des données pour le total des services et le second pour le total des services privés (c'est à dire à l'exclusion des services des administrations publiques).

Notes pour la ventilation géographique :

- (1) La série Non-spécifiés inclut les Organisations internationales.
- (2) Le Total de l'Asie et de l'Océanie inclus le Total de l'Afrique.
- (3) Le Turkmenistan et l'Ouzbekistan sont inclus en Europe.
