

OECD Composite Leading Indicators in slowdown phase in most major OECD economies

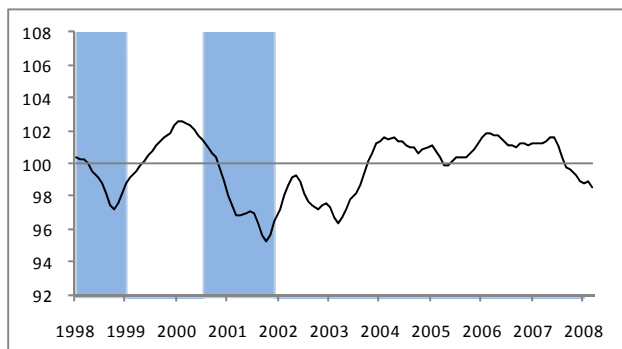

The latest composite leading indicators (CLIs) suggest a slowdown in economic activity lies ahead in the OECD area. February 2008 data indicate a weakening outlook for all the major seven economies. The latest data for major OECD non-member economies point to a downturn in China and India and slowing expansion in Brazil and Russia.

The CLI for the **OECD area** increased by 0.1 point in February 2008 but was 2.4 points lower than in February 2007. The CLI for the **United States** decreased by 0.1 point in February and was 2.5 points lower than a year ago. The **Euro area's** CLI fell by 0.3 point in February and stood 2.8 points lower than a year ago. In February, the CLI for **Japan** rose by 0.4 point, but it was 4.7 points lower than the same month last year. The CLI for Japan is strongly influenced by its "dwellings started" component, showing a transitory change caused by modifications of the Building Standard Law. The CLI, however, has a weakening tendency even when the effect of this component is filtered out.

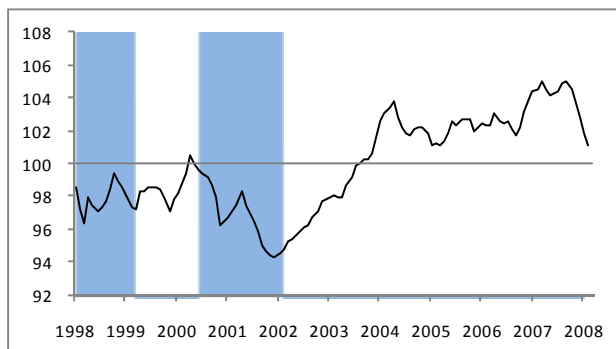

The CLI for the **United Kingdom** fell by 0.3 point in February 2008 and it was 1.3 point lower than February 2007. The CLI for **Canada** was unchanged in February but was 2.1 points lower than a year ago. For **France**, the CLI fell by 0.6 point in February and was 1.9 point lower than a year ago. The CLI for **Germany** decreased by 0.1 point in February and was 2.7 points lower than a year ago. For **Italy**, the CLI decreased by 0.2 point in February and stood 4.1 points lower than February 2007.

The CLI for **China** was down by 0.7 point in February 2008 and stood 3.5 point lower than a year ago. The CLI for **India** fell by 0.7 point in January 2008 and was 1.9 point lower than in January 2007. The CLI for **Russia** fell by 0.1 point in February, but its level was 2.9 points higher than a year ago. In February 2008 the CLI for **Brazil** dropped 0.6 point, but it stood 2.4 points higher than a year ago.

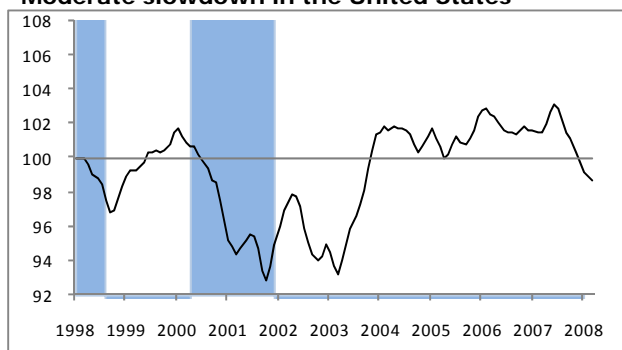

Moderate slowdown in the OECD area

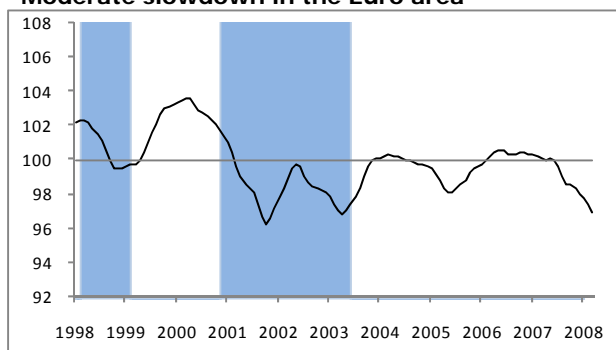

Downturn in China

Moderate slowdown in the United States

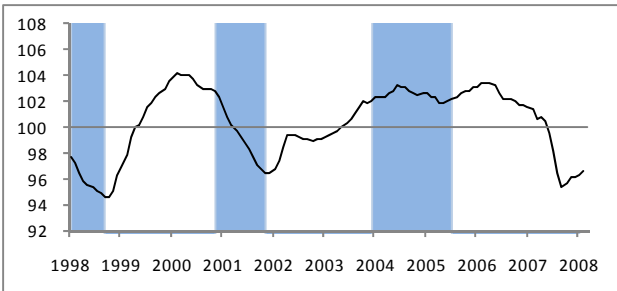

Moderate slowdown in the Euro area

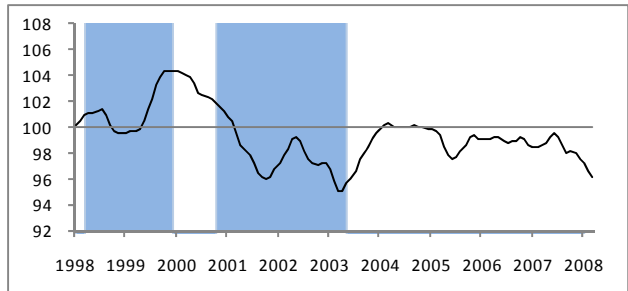

The above graphs show each country's growth cycle outlook based on the CLI which may signal turning points in economic activity approximately six months in advance. Shaded areas represent observed growth cycle downturns (measured from peak to trough) in the reference series (economic activity).

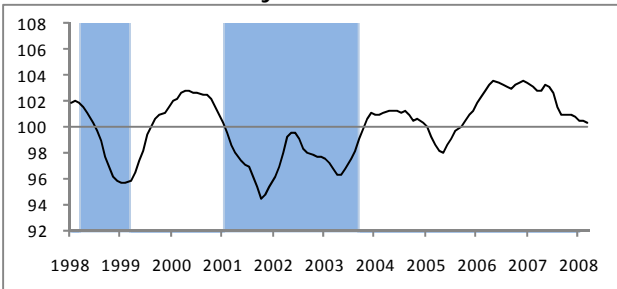

Slowdown in Japan

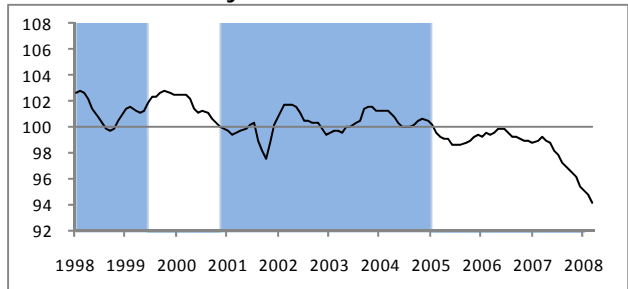

Moderate slowdown in France

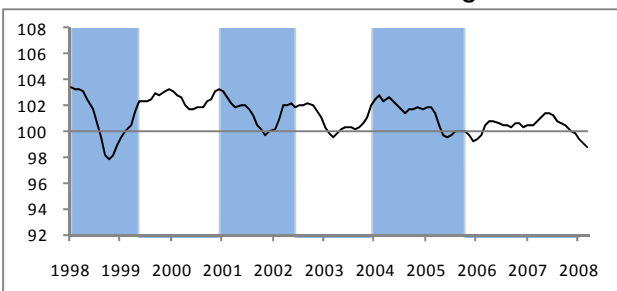

Downturn in Germany

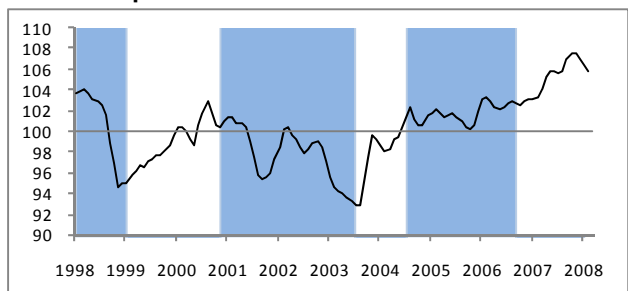

Slowdown in Italy

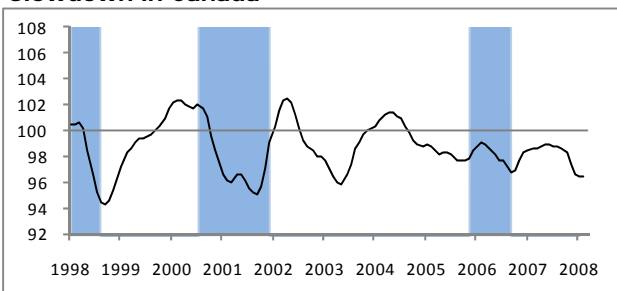

Moderate slowdown in the United Kingdom

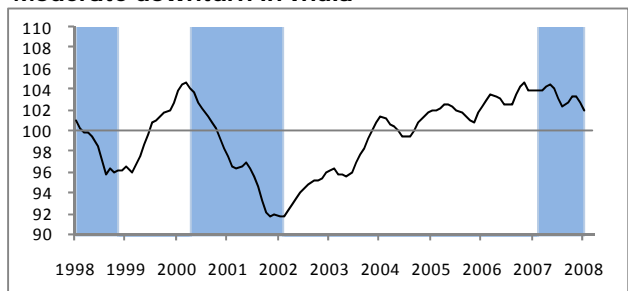

Slower expansion in Brazil

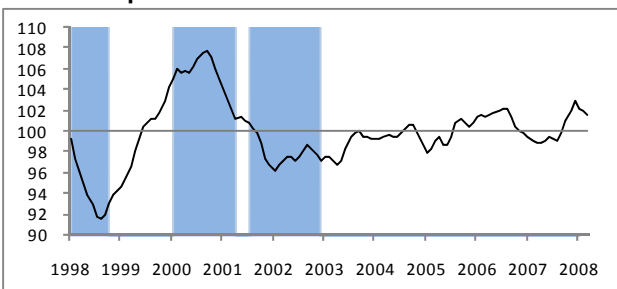

Slowdown in Canada

Moderate downturn in India

Slower expansion in Russia

The above graphs show each country's growth cycle outlook based on the CLI which may signal turning points in economic activity approximately six months in advance. Shaded areas represent observed growth cycle downturns (measured from peak to trough) in the reference series (economic activity).

Table 1: Composite Leading Indicators

	Ratio to trend, amplitude adjusted					Change from previous month					Year on Year change (points)	Growth cycle outlook**
	(long term average =100)					(points)						
	2007		2008			2007		2008				
Oct	Nov	Dec	Jan	Feb	Oct	Nov	Dec	Jan	Feb			
OECD Area	99.7	99.3	99.0	98.8	98.9	-0.2	-0.4	-0.3	-0.2	0.1	-2.4	moderate slowdown

Methodological Notes

The OECD CLI is designed to provide early signals of turning points (peaks and troughs) between upswings and downswings in the growth cycle of economic activity. The CLI is an instrument of analysis that has to be used carefully. Whilst it has a long-term average = 100, the CLI provides qualitative information on short-term economic movements rather than quantitative measures. Therefore, the main message of CLI movements over time is the direction up or down in the growth cycle where the cyclical phases are defined as follows: expansion – CLI increasing and above 100; downturn – CLI decreasing but above 100; slowdown – CLI decreasing and below 100; recovery – CLI increasing but below 100.

The CLIs are aggregated time series which summarise information contained in a number of key short-term economic indicators known to be linked to GDP. They have been compiled using a modified version of the method developed by the US National Bureau of Economic Research. The CLI system comprises a set of component series selected from a wide range of economic indicators all sharing the common property of indicating swings in future economic activity (224 series are used in total, about 5-10 for each country).

Cyclical turning points are directly captured in the (amplitude adjusted) de-trended or ratio to trend form of the CLI as compiled from its de-trended component series. The monthly change (point) of the CLI provides information on short-term movements while the change (point) from the same month previous year supplies short-term trend information (Table 1). In practice, turning points in industrial production or GDP have been found about six months (on average) after the signals of turning points had been detected in the CLI. The historical performance (lead/lag at turning points) of the CLIs for individual countries and areas are set out in Table 2.

In general, the monthly index of industrial production covering all industry sectors (IIP) is used for the reference series as a proxy measure for quarterly GDP, because historical turning points of IIP have coincided with those of GDP for most OECD countries. Recent confirmed turning points in the reference series are set out in Table 2, where the most recent ones are noted provisional until they have been verified against those of the quarterly GDP. This is done in order to ensure consistency between the final reference chronology and GDP.

Access to time series data and methodological information for *OECD Composite Leading Indicators (CLI)*, *standardised consumer* and *business confidence indicators*, *business tendency survey indicators* by sector and *consumer opinion survey indicators* is provided by the OECD Business Cycle Analysis Database available at the OECD web site at <http://stats.oecd.org/mei/default.asp?rev=2>

The **OECD-Total** covers the following 29 countries: Australia, Austria, Belgium, Canada, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Japan, Korea, Luxembourg, Mexico, Netherlands, New Zealand, Norway, Poland, Portugal, Slovak Republic, Spain, Sweden, Switzerland, Turkey, United Kingdom, and United States.

The **G7 area** covers Canada, France, Germany, Italy, Japan, United Kingdom and United States.

The **Euro area** (only Euro area countries that are members of OECD) covers the following 12 countries: Austria, Belgium, Finland, France, Germany, Greece, Italy, Ireland, Luxembourg, the Netherlands, Portugal, and Spain.

The **Major Five Asia area** covers China, India, Indonesia, Japan and Korea.
