OECD ECONOMIC OUTLOOK

Better, but not good enough

Catherine L. Mann
OECD Chief Economist

ECOSCOPE blog: oecddecoscope.wordpress.com
Key messages

Global growth expected to pick-up modestly with upside risks

- Confidence is increasing and investment and trade are picking up from low levels
- Growth is broad based; recovery in commodity producers helps the modest global upturn
- Signs of rising demand for high-tech goods and investment to upgrade capital

Productivity and wage growth remain subdued; financial stability risks persist

- Headline employment indicators are improving but labour markets have not recovered
- Financial risks from high and rising credit growth, house price increases, interest rate gaps

More needs to be done to share the gains from structural trends and trade

- Changes to technology, consumer preferences and trade are occurring simultaneously
- Job losses from shifts in activity are concentrated in manufacturing and specific regions

An integrated policy approach is needed to make globalisation work for all

- A more level playing field for the international system
- Domestic reforms to boost competition, job creation, skills and innovation
- Targeted policies to help people who are left behind seize new opportunities
Global GDP growth should pick up modestly but remains below historical norms

Source: OECD June 2017 Economic Outlook database.
GDP growth per person is below history and income inequality continues to rise

**GDP growth per person**

Horizontal lines are averages for 1987-2007

- United States
- Euro area
- Japan

**Income inequality is rising in the OECD**

Real household disposable income, total population

- Top 10%
- Mean income
- Bottom 10%

Note: RHS is the unweighted average of 17 OECD countries.

Note: Global semi-conductor billings in nominal US dollars. Major advanced computer and electronics output is a weighted average of production of computer and electronic products for the United States, output of computer, electronic and optical products for Germany, and production of information and communications electronics equipment plus electronic parts and devices for Japan. Source: OECD June 2017 Economic Outlook database; World Semi-Conductor Statistics; Eurostat; Board of Governors of the Federal Reserve System; Japan Ministry of Economy, Trade and Industry; and OECD calculations.
Global trade has recovered recently with important support from stimulus in China.

Contributions to world trade growth

Note: Commodity producers includes Argentina, Australia, Brazil, Chile, Colombia, Norway, New Zealand, Russia, Saudi Arabia, South Africa and other oil producing countries.

Source: OECD June 2017 Economic Outlook database; and National Bureau of Statistics of China.
Labour market recovery is incomplete and real wage growth remains sluggish

Unemployment and underemployment

OECD, share of labour force

- Unemployment rate
- Marginally attached
- Involuntary part-time

Real wage growth

Horizontal lines are averages for 1987-2007

Note: Real wages measured as labour compensation per employee adjusted for the GDP deflator.
Rising private credit in EMEs and housing market risks in advanced economies

Private non-financial sector credit

Source: BIS; OECD Analytical House Price database; and OECD calculations.

Note: EMEs excluding China is an unweighted average of ratios for Argentina, Brazil, Colombia, India, Indonesia, Mexico, Russia, Malaysia, South Africa and Turkey.
Inflation generally below objectives; potential interest rate divergence creates financial risks

Core inflation

Market-based expectations of overnight interest rates

Note: Core inflation for Japan adjusted for the impact of consumption tax increases.

Source: OECD June 2017 Economic Outlook database; Bloomberg; and OECD calculations.
Diagnosing the challenge of structural trends
Trade specialisation and patterns have shifted

### World goods trade

*Share of world goods exports, volumes*

- OECD
- Rest of the World
- China
- Dynamic Asian Economies

### World trade by type

*Exports, values*

- Business services
- Financial services
- Manufacturing

Note: LHS – Dynamic Asian Economies includes Malaysia, the Philippines, Singapore, Thailand, Vietnam, Chinese Taipei and Hong Kong. RHS – Business services includes R&D, ICT, real estate and other business activities. Financial services includes financial intermediation, insurance, pension funding and other financial activities.

Source: OECD-WTO Trade in Value Added (TiVA) database; UN Comtrade database; and OECD calculations.
Job losses have centred on people with mid-level skills

**Job polarisation by country**

*Change in share of total employment by skill level, 1995-2015*

- **High skill**
- **Middle skill**
- **Low skill**

Note: OECD is the unweighted average of 24 countries. For Japan 1995-2010.
Source: OECD Employment Outlook 2017; European Union Labour Force Survey; Labour force surveys for Canada, Japan and the United States; and OECD calculations.
Advanced economies have moved up the value chain, but EMEs are moving up too

Share of export goods by complexity

- **Least complex**
- **Most complex**

Note: In nominal terms. Least complex is the 1st quartile of products by complexity (e.g. crayons), most complex is the 4th quartile (e.g. medical equipment), excluding major commodities. Dynamic Asian Economies includes Malaysia, the Philippines, Singapore, Thailand, Vietnam, Chinese Taipei and Hong Kong. Europe is the unweighted average of the Czech Republic, France, Germany, Ireland, Italy, Poland, Portugal and the UK. Source: UN Comtrade database; and OECD calculations.
Manufacturing job losses and role for Technology & Consumer Preferences vs Trade

Factors explaining the decline in manufacturing jobs

Change in share of total employment, annual average 1990-2008

% pts

Imports of intermediates (trade)
Imports for final consumption (trade)
Technology and consumer preferences
Other factors
Change in commercial services employment share
Change in manufacturing employment share

Note: Decomposition based on regression estimation. Each factor is based on the change over the period. Technology and consumer preferences include ICT and machinery investment, changes in the manufacturing consumption share and time specific effects. Source: OECD Economic Outlook database; STAN database; and OECD calculations.
Decline in manufacturing matters because activity is regionally concentrated

Geographic concentration index by sector

Average from 2000 to 2015 or latest

Note: “Distributive trades” includes distributive trade, repairs, transportation and storage, accommodation and food service activities. Index measures the extent to which employment is concentrated in particular regions, varying between 0 (no concentration, where all regions of a country have the same manufacturing employment rate) and 100 (maximum concentration, where all manufacturing employment is concentrated in the smallest region). The index incorporates the size of the region and is based on OECD (2003) “Geographic Concentration and Territorial Disparity in OECD Countries”. Source: OECD Regional database; and OECD calculations.
Countries with larger falls in manufacturing jobs have increased regional inequality

Source: OECD Regional database; and OECD calculations.
An integrated policy approach is needed to respond to structural trends and make globalisation work for all
Make the international system work better, and create a more level playing field

Actions to improve the international environment:

- Pursue open markets for cross-border trade and investment
- Preserve institutions and standards, such as for labour and environmental protection
- Promote multilateral cooperation, e.g. on tax base erosion and profit shifting and competition policy
- Combat corruption, illicit trade and counterfeiting

Actions in response to OECD *Going for Growth* recommendations

*Number of reforms, 2015-16*

Note: includes all OECD and BRIICS countries, the EU and Colombia.

Source: OECD *Going for Growth* 2017
Implement domestic reform packages to strengthen inclusive growth

Source: OECD *Going for Growth* 2017
Help people and displaced workers to adapt and take new opportunities

Help laid-off workers to find a new job
Increase the scope and efficiency of active labour market policies

Boost job creation by reducing the tax wedge on low-skilled workers

Better prepare people for work
Expand and improve vocational training and education

Allocate education resources more equitably

Act to strengthen inclusive growth and make globalisation work for all

International policies

Make the international system fairer and work better

Domestic policies

Policies to encourage new firms, innovation & job creation

Targeted policies to help people seize new opportunities
