OECD INTERIM ECONOMIC OUTLOOK

Global growth weakening as some risks materialise

6 March 2019

Laurence Boone
OECD Chief Economist

ECOSCOPE blog: oecdecoscope.wordpress.com
Key messages

Growth is weakening particularly in Europe

Vulnerabilities in China, Europe and financial markets could derail the global economy

Governments should cooperate to reduce risks
Global growth is slowing with further signs of decoupling

World GDP growth has started to slow

GDP growth is more dispersed

Note: LHS: Global growth in PPP terms. GDP figures for the fourth quarter of 2018 are based on available national accounts data plus estimates for Argentina, Australia, Russia, and Turkey.

Source: OECD Economic Outlook database.
## Real GDP growth revised down

### OECD Interim Economic Outlook Projections

*Year-on-year, %. Arrows indicate the direction of revisions since November 2018.*

VULNERABILITIES IN CHINA, EUROPE AND FINANCIAL MARKETS COULD DERAIL THE GLOBAL ECONOMY
A slowdown in China would weigh on growth across the world

GDP growth impact of a negative demand shock of 2% pts in China

% difference from baseline in the first year

Note: Simulated impact of a decline of 2 percentage points per year in domestic demand growth in China for two years. The uncertainty shock is a 50 basis point increase in investment risk premia in all economies. Policy interest rates are endogenous in all areas. Commodity exporters include Argentina, Australia, Brazil, Chile, Indonesia, Russia, South Africa and the other oil producers. East Asia includes Chinese Taipei, Hong Kong (China), Korea, Singapore, Vietnam and other East Asian countries. Regions are weighted using purchasing power parities. Source: OECD calculations.
Slower credit growth may weaken the euro area further

**Sovereign bond yields**

*10-year government bond yield*

**Credit growth**

*Bank credit to non-financial corporations*

Note: RHS: Credit growth of loans adjusted for sales and securitisation, non-financial corporations.
Source: Thomson Reuters; and OECD calculations.
The UK economy has been weakening since the Brexit referendum

Real GDP loss since the 2016 referendum

The green line is a GDP-weighted average of France, Germany and the United States. Source: OECD Economic Outlook database; and OECD calculations.

Investment has declined

Note: LHS: The green line is a GDP-weighted average of France, Germany and the United States. Source: OECD Economic Outlook database; and OECD calculations.
A combination of these risks could further weaken euro area growth

Bilateral share of goods exports

2017

Note: Black triangles represent the share of total goods export in % of GDP. Data as of 2016 for the Netherlands. Source: OECD International Merchandise Trade Statistics database; OECD Economic Outlook database; and OECD calculations.
Pressure on EMEs has eased but vulnerabilities persist

EME sovereign bond yield spreads have declined

Record level of corporate bond repayments ahead

Emerging market economies

Note: LHS panel: Global EMEs stands for JP Morgan Emerging Bond Index (EMBI), which measures the yield spread between EMEs’ government bonds denominated in US dollars and US Treasuries.

GOVERNMENTS SHOULD COOPERATE TO REDUCE RISKS
Interest rates are set to stay low for longer

Expected overnight interest rates for end-2019

Market expectations

10-year government bond yields

Source: Thomson Reuters; and OECD calculations.
Public debt levels vary between countries but trend growth is low in most euro area countries.

Potential GDP per capita growth and public debt

Note: Public debt is based on Maastricht criteria.
Source: OECD Economic Outlook database; and OECD calculations.
Impact of structural reforms and a coordinated 3-year fiscal stimulus in countries with fiscal space in the euro area

**GDP**

Real, difference from baseline, per cent

- **Fiscal stimulus in countries with fiscal space**
- **Structural reforms only**

**Wages per employee**

Real, difference from baseline, per cent

Note: The level of technical progress is gradually raised by 1% by the fifth year in all countries, and countries with fiscal space also increase government investment by 0.5% of GDP for three years. Euro area monetary policy is assumed to be set in a way that takes into account the eventual long-run improvement in output. Countries with fiscal space here include Germany, the Netherlands, Austria, Finland, Ireland, Slovak Republic, Slovenia, Estonia, Latvia, and Lithuania.

Source: OECD calculations.
Key messages

Growth is weakening particularly in Europe

- Uncertainty is weighing on confidence, trade, investment and employment prospects
- EU trade has slowed sharply, contributing to weaker-than-expected growth in Europe

Vulnerabilities in China, Europe and financial markets could derail the global economy

- A sharper slowdown in China would weigh on global growth and could weaken growth in Europe further
- Political uncertainty in Europe is high and could weaken credit growth
- Challenges persist in financial markets and some EMEs

Governments should cooperate to reduce risks

- Intensify multilateral dialogue globally and in Europe to reduce policy uncertainty
- Central banks should remain supportive but cannot and should not act alone
- Euro area governments should coordinate a fiscal and structural push
