How much time do teachers spend teaching?

- Public-school teachers teach an average of 1,001 hours per year at the pre-primary level, 782 hours at the primary level, 694 hours at the lower secondary level, and 655 hours at the upper secondary level of education.

- In about one third of the countries with available data, the amount of teaching time increased or decreased by at least 10% between 2000 and 2012 in primary, lower secondary and/or upper secondary education.

Context

Although statutory working hours and teaching hours only partly determine teachers’ actual workload, they do offer valuable insight into the demands placed on teachers in different countries. Teaching hours and the extent of non-teaching duties may also affect the attractiveness of the teaching profession. Together with teachers’ salaries (see Indicator D3) and average class size (see Indicator D2), this indicator presents some key measures regarding the working lives of teachers.

The proportion of statutory working time spent teaching provides information on the amount of time available for non-teaching activities such as lesson preparation, correction, in-service training and staff meetings. A large proportion of statutory working time spent teaching may indicate that less time is devoted to tasks such as assessing students and preparing lessons.

In addition to class size and the ratio of students to teaching staff (see Indicator D2), students’ hours of instruction (see Indicator D1) and teachers’ salaries (see Indicator D3), the amount of time teachers spend teaching also affects the financial resources countries need to allocate to education (see Indicator B7).
Other findings

- The average number of teaching hours in public pre-primary schools is 1,001 hours per year, but ranges from 532 hours in Mexico to over 1,500 hours in Iceland, Norway and Sweden.

- **Public primary school teachers teach an average of 782 hours per year**, but teaching time ranges from less than 570 hours in Greece and the Russian Federation to over 1,000 hours in Chile, Indonesia and the United States.

- **The number of teaching hours in public lower secondary schools averages 694 hours per year**, but ranges from 415 hours in Greece to over 1,000 hours in Argentina, Chile, Mexico and the United States.

- Teachers in public upper secondary schools teach an average of 655 hours per year, but ranges from 369 hours in Denmark to over 1,000 hours in Argentina, Chile and the United States.

- On average, **pre-primary teachers are required to teach around 25% more hours than primary school teachers**, but the time during which teachers are required to be working at school, or their total working time, is often equivalent for these two levels of education.

- Regulations concerning teachers’ required working time vary significantly. In most countries, teachers are formally required to work a specific number of hours per year. In some, teaching time is only specified by the number of lessons per week and assumptions may be made about the amount of non-teaching time required per lesson at school or elsewhere.

Trends

About one third of the countries with available data reported an increase or decrease of 10% or more in teaching time between 2000 and 2012 in primary, lower secondary and/or upper secondary education. The number of teaching hours changed dramatically in a few countries: it increased by 26% in Spain at the secondary level, and decreased by almost 20% in Korea at the primary level.
Analysis

Teaching time

At all levels of education, countries vary in the number of teaching hours per year required of the average public school teacher.

At the pre-primary level, the teaching time required in public school varies more across countries than it does for any other level. The number of teaching days ranges from 144 days in France to 251 in Indonesia; annual teaching hours range from less than 700 hours in Argentina, England, Greece, Indonesia, Korea and Mexico to more than 1 500 in Iceland, Norway and Sweden. On average across OECD countries, teachers at this level of education are required to teach 1 001 hours per year spread over 40 weeks or 191 days of teaching.

Primary school teachers are required to teach an average of 782 hours per year. In most countries with available data, teachers are required to teach between 3 and 6 hours a day. The exceptions are Chile, France and the United States, where teachers teach slightly more than 6 hours per day. There is no set rule on how teaching time is distributed throughout the year. In Spain, for example, primary school teachers must teach 880 hours per year, about 100 hours more than the OECD average. However, those teaching hours are spread over fewer days of instruction than the OECD average because primary school teachers in Spain teach an average of five hours per day compared to the OECD average of 4.3 hours.

Lower secondary school teachers teach an average of 694 hours per year. The teaching time at the lower secondary level ranges from less than 600 hours in Finland, Greece, Korea, Poland, the Russian Federation and Turkey to more than 1 000 hours in Argentina, Chile, Mexico and the United States.

A teacher of general subjects in upper secondary education has an average teaching load of 655 hours per year. Teaching time exceeds 800 hours in only six countries: Argentina, Australia, Chile, Mexico, Scotland and the United States. However, in Chile and Scotland, the reported hours refer to the maximum time teachers can be required to teach and not to their typical teaching load. In contrast, teachers are required to teach less than 500 hours per year in Denmark, Greece and the Russian Federation. Teachers in Finland, Greece, Japan, Korea, Norway, the Russian Federation and Slovenia teach for three hours or less per day, on average, compared to more than five hours in Chile and the United States and up to eight hours in Argentina. Including breaks between classes in teaching time in some countries, but not in others, may explain some of these differences (Table D4.1 and Chart D4.2).

StatLink © http://dx.doi.org/10.1787/888933120081
Differences in teaching time between levels of education

In most countries, teaching time at the upper secondary level is less than at the pre-primary level. The exceptions are Chile and Scotland, where teachers are required to teach the same number of hours irrespective of the level of education taught, and Argentina, England, Indonesia and Mexico, where secondary school teachers are required to teach more hours than pre-primary school teachers (Table D4.1 and Chart D4.2).

Teaching time requirements vary the most between the pre-primary and primary levels of education. On average, pre-primary school teachers are required to spend almost 25% more time in the classroom than primary school teachers. In Estonia, Iceland, Norway and Slovenia, pre-primary school teachers are required to teach at least twice the amount of time than primary school teachers. Even though the duties of teachers are likely to be different between these two levels of education, considerable differences in working conditions between pre-primary and other levels of education might affect the attractiveness of the teaching profession at the pre-primary level of education.

In the Czech Republic, France, Greece, Indonesia, Israel and Turkey, primary school teachers have at least 30% more annual teaching time than lower secondary school teachers. In contrast, the difference does not exceed 5% in the United States, and there is no difference in Chile, Denmark, Estonia, Hungary, Iceland, Scotland and Slovenia. Argentina, England and Mexico are the only countries in which the teaching load for primary school teachers is lighter than for lower secondary school teachers.

Teaching time at the lower and upper secondary levels is similar across most countries. However, in Mexico and Norway, the annual required teaching time at the lower secondary level is at least 20% more than at the upper secondary level. This difference amounts to almost 80% in Denmark.

Actual teaching time

Statutory teaching time, as reported by most of the countries in this indicator, must be distinguished from actual teaching time. Actual teaching time is the annual average number of hours that full-time teachers teach a group or a class of students, including overtime, and is based on administrative registers, statistical databases, representative sample surveys or other representative sources.

Only few countries could report both statutory and actual teaching time but these data suggest that actual teaching time can sometimes differ from statutory requirements. In Australia, for example, lower secondary school teachers work around 5% more than the statutory benchmark time, while in Poland, actual teaching time is up to 14% more than statutory requirements. In contrast, in Estonia, actual teaching time is 5% less than statutory teaching time at the lower secondary level (Table D4.3 and Chart D4.4, available on line).

Trends in teaching time

In about one third of the countries with available data, teaching time varied by at least 10% at one or various levels of education between 2000 and 2012 (Table D4.2 and Chart D4.1).

In Israel and Japan, there was a 15% increase in teaching time at the primary level between 2000 and 2012 and teaching time also increased by 13% in Turkey at this level of education. In Israel, this increase in teaching and working time is part of the "New Horizon" reform that has been gradually implemented since 2008. One of the key measures of this reform was to lengthen teachers’ workweek to accommodate small-group teaching in exchange for more generous compensation. Teachers’ working time has been increased from 30 to 36 hours per week and now includes five hours of small-group teaching in primary schools. To compensate, salaries have been raised substantially (see Indicator D3).

Secondary school teachers in Spain were required to teach 26% more in 2012 than in 2000; in Luxembourg, secondary school teachers were required to teach 15% more hours in 2012 than in 2005. Teaching time also increased by around 20% in Portugal, 17% in Iceland and by 13% in Turkey at the upper secondary level between 2000 and 2012.

In contrast, net teaching time dropped by around 20% between 2000 and 2012 in Korea at primary level and by around 10% in Mexico (lower secondary level), in the Netherlands (lower and upper secondary levels) and in Scotland (primary level). In Scotland, the decrease was part of the Teachers’ Agreement, “A teaching profession for the 21st century”, which introduced a 35-hour workweek for all teachers and a phased reduction of maximum teaching time to 22.5 hours per week for primary, secondary and special school teachers in 2001. However, even with this decrease of net contact time, teachers at these levels in Scotland are still required to teach more hours than on average across OECD countries.
Box D4.1. How do lower secondary teachers spend their class time?

According to the 2013 OECD Teaching and Learning International Survey (TALIS), among the three types of activities – teaching and learning activities, administrative tasks, and keeping order (or behaviour management of individual students or the entire class) – lower secondary teachers in participating countries and economies reported spending most of their class time (79%) on teaching and learning activities. However, this proportion varies across countries, from 87% in Bulgaria to 67% in Brazil. Keeping order in the classroom, often a major concern for new teachers, reportedly occupied an average of 13% of teachers’ time across countries, although this proportion also varied among countries, from 8% in Poland to 20% in Brazil. Administrative tasks reportedly require the least amount of time from teachers (8%) compared to the other two broad categories. Teachers in Bulgaria and Estonia reported spending 5% of their class time on administrative tasks, while teachers in Brazil reported that 12% of their class time was devoted to such tasks. There is no doubt that teaching and learning should comprise the largest share of teachers’ class time each day. Time spent on administrative tasks and keeping order reduces the amount of time available for instruction. However, it is unclear whether the other two tasks interfere with high-quality instruction or if teachers, and ultimately students, would benefit from reductions in class time spent on administrative tasks and keeping order so that teachers and students could devote more time to teaching and learning.

Chart D4.a. Distribution of class time during an average lesson (2013)

Average proportion of time lower secondary education teachers report spending on each of these activities in an average lesson

Teachers’ working time

In most countries, teachers are formally required to work a specified number of hours per week, including teaching and non-teaching time, to earn their full-time salary. Some countries also regulate the time a teacher has to be present in the school. Within this framework, however, countries differ in how they allocate time for each activity (Chart D4.3).

More than half of OECD countries specify the time during which teachers are required to be available at school, for both teaching and non-teaching activities, at one or various levels of education. In slightly more than half of these countries, the difference between the time upper secondary school teachers and pre-primary school teachers are required to be available at school is less than 10%. In Israel, Norway and Sweden, pre-primary teachers are required to be available at school at least 30% more hours than upper secondary school teachers (Table D4.1).
In Austria (pre-primary, primary and lower secondary education), the Czech Republic, Denmark, France (lower and upper secondary education), Germany, Japan (primary, lower and upper secondary education) and the Netherlands, teachers’ total annual statutory working time, at school or elsewhere, is specified, but the allocation of time spent at school and time spent elsewhere is not.

In Sweden, although the total working time per year is decided through collective agreements, the school leader decides on the number of working hours per week and on the use of teachers’ time (teaching or non-teaching activities).

In addition, workload and teaching load requirements may evolve throughout the career. While some beginning teachers might have a reduced teaching load as part of their induction programmes, some countries also encourage older teachers to stay in the teaching profession by diversifying their duties and reducing their teaching hours.

### Box D4.2. What amount of time do teachers spend on various work-related tasks during a typical week?

Findings from the 2013 TALIS survey suggest that lower secondary teachers’ work consists of a multitude of often competing responsibilities. As expected, both full-time and part-time teachers reported spending more time teaching than on any other single task. The overall average is 19 hours per week, ranging from 15 hours in Norway to 27 hours in Chile. Japanese teachers reported spending only 18 hours teaching out of an average reported 54 total working hours, meaning they spend substantially more time on other tasks related to their job than they actually do on teaching. The average time reported to be spent on planning or preparing lessons is 7 hours, ranging from 5 hours in Finland, Israel, Italy, the Netherlands, and Poland, to 10 hours in Croatia. Time reported to be spent marking student work averages 5 hours, but is around double that in Portugal (10 hours) and Singapore (9 hours).

### Chart D4.b. Teachers’ working hours (2013)

Average number of 60-minute hours lower secondary education teachers report having spent on the following activities during the most recent complete calendar week

1. A “complete” calendar week is one that was not shortened by breaks, public holidays, sick leave, etc. Also includes tasks that took place during weekends, evenings or other off-classroom hours.

Items are ranked in descending order, based on the average number of 60-minute hours spent on the following activities during the most recent complete calendar week.

**Source:** OECD (2014), TALIS 2013 Results: An International Perspective on Teaching and Learning, TALIS, OECD Publishing.

[StatLink](http://dx.doi.org/10.1787/888933042029)
Other tasks, such as school management, working with parents, and extracurricular activities, fill an average of only 2 hours per week for each activity. Teachers in Korea and Malaysia reported spending twice as much time (six hours) as the TALIS average on general administrative work. Extracurricular activities are an important part of teachers’ work in Japan, where teachers reported spending 8 hours on extracurricular activities, far above the TALIS average of 2 hours.

These findings are meant to paint a picture of the typical workweek among lower secondary teachers in each country and therefore include responses from both full-time and part-time teachers. Because there may be overlap in some of the activities, they should not be added to a total number of work hours.

For example, Greece reduces teaching hours according to how many years a teacher has served. At the secondary level, teachers are required to teach 21 class sessions per week. After six years, this drops to 19 sessions, and after 12 years to 18 sessions. After 20 years of service, teachers are required to teach 16 class sessions a week – more than 25% less than teachers who have just started their careers. However, the remaining hours of teachers’ working time must be spent at school.

Non-teaching time

Although teaching time is a substantial component of teachers’ workloads, assessing students, preparing lessons, correcting students’ work, in-service training and staff meetings should also be taken into account when analysing the demands placed on teachers in different countries. The amount of time available for these non-teaching activities varies across countries, and a large proportion of statutory working time spent teaching may indicate that less time is devoted to activities such as assessing students and preparing lessons.

In the 21 countries with both teaching and total working time data for lower secondary teachers, the percentage of teachers’ working time spent teaching ranges from less than 35% in Austria, the Czech Republic, Hungary, Iceland, Japan and Turkey, to 63% in Scotland (Chart D4.3).

In the 19 countries that specify both teaching time and the amount of time that lower secondary teachers are required to be available at school, the percentage of teachers’ working time at school spent teaching ranges from less than 40% in Greece and Iceland to more than 90% in Ireland.

StatLink: http://dx.doi.org/10.1787/888933320119

Non-teaching tasks are a part of teachers’ workload and working conditions. The non-teaching activities required by legislation, regulations or agreements between stakeholders (e.g. teachers’ unions, local authorities, school boards, etc.) do not necessarily reflect the actual participation of teachers in non-teaching activities, but provide an insight on the breadth and complexity of teachers’ roles.

Individual planning or preparing lessons, teamwork and dialogue with colleagues and communicating and co-operating with parents are the most common non-teaching tasks required of lower secondary teachers during their statutory working time at school or statutory total working time. These tasks are required in at least 20 of the 34 countries with available data. Marking/correcting student work, general administrative communication and paperwork and professional development activities are also required in around half of the countries with available data. Lower secondary teachers are required to supervise students during breaks, provide counselling and guidance to students, or and/or participate in school management in around one-third of the countries, and only 8 countries require that lower secondary teachers engage in extracurricular activities after school. In most countries that record the non-teaching tasks required of teachers, the specific number of hours allocated for each task is, however, not specified. In Brazil, the Czech Republic, Hungary, Korea, the Netherlands, New Zealand and Slovenia, any of these non-teaching tasks may be required of teachers, but the decision is taken at the school level.
In Austria (upper secondary level), Belgium (Flemish Community, secondary level), Belgium (French Community), Italy and Japan (pre-primary level), there are no formal requirements regarding time spent on non-teaching activities. However, this does not mean that teachers are given total freedom to carry out other tasks. In the Flemish Community of Belgium, although there are no regulations regarding the time devoted to preparing lessons, correcting tests, marking students’ papers, etc., additional non-teaching hours at school are set at the school level. In Italy, there is a requirement of up to 80 hours of scheduled non-teaching collegial work at school per year. Of these 80 hours, up to 40 hours of compulsory working time per year are dedicated to meetings of the teachers’ assembly, staff planning meetings and meetings with parents; the remaining compulsory 40 hours are dedicated to class councils.

**Definitions**

**Actual teaching time** is the annual average number of hours that full-time teachers teach a group or class of students including all extra hours such as overtime. The data can be from administrative registers, statistical databases, representative sample surveys or other representative sources.

The **number of teaching days** is the number of teaching weeks multiplied by the number of days per week a teacher teaches, less the number of days on which the school is closed for holidays.

The **number of teaching weeks** refers to the number of weeks of instruction excluding holiday weeks.

**Statutory teaching time** is defined as the scheduled number of 60-minute hours per year that a full-time teacher teaches a group or class of students as set by policy. It is normally calculated as the number of teaching days per year multiplied by the number of hours a teacher teaches per day (excluding periods of time formally allowed for breaks between lessons or groups of lessons). Some countries provide estimates of teaching time based on survey data. At the primary school level, short breaks between lessons are included if the classroom teacher is responsible for the class during these breaks.

**Working time** refers to the number of hours that a full-time teacher is expected to work as set by policy. It does not include paid overtime. **According to a country's formal policy, working time can refer to:**

- the time directly associated with teaching and other curricular activities for students, such as assignments and tests; and
- the time directly associated with teaching and hours devoted to other activities related to teaching, such as preparing lessons, counselling students, correcting assignments and tests, professional development, meetings with parents, staff meetings, and general school tasks.

**Working time required at school** refers to the time teachers are required to spend working at school, including teaching and non-teaching time.

**Methodology**

Data are from the 2013 OECD-INES Survey on Teachers and the Curriculum and refer to the school year 2011/12.

In interpreting differences in teaching hours among countries, net contact time, as used here, does not necessarily correspond to the teaching load. Although contact time is a substantial component of teachers’ workloads, preparing for classes and necessary follow-up, including correcting students’ work, also need to be included when making comparisons. Other relevant elements, such as the number of subjects taught, the number of students taught, and the number of years a teacher teaches the same students, should also be taken into account.

Notes on definitions and methodologies for each country are provided in Annex 3, available at www.oecd.org/edu/eag.htm.

**Note regarding data from Israel**

The statistical data for Israel are supplied by and are under the responsibility of the relevant Israeli authorities. The use of such data by the OECD is without prejudice to the status of the Golan Heights, East Jerusalem and Israeli settlements in the West Bank under the terms of international law.
