Funding Higher Education in Turkey

Üstün Ergüder
Director, Istanbul Policy Center at Sabancı University
And
Former Rector (1992-2000), Boğaziçi University
Two Types of Universities under a Single System

- State Universities.
- Private Universities established by philanthropic foundations.
- Council of Higher Education:
  - National authority for higher education.
  - Independent of the Ministry of National Education (MoNE).
  - Reports to the President of the Republic.
  - Uniformity is the name of the game.
- Yet, increasing diversity in practice:
  - Private vs state
  - Increasing diversification within each category.
Funding State Universities: Budget

- Line item budget each year decided upon negotiations between the university- CHE – and the Ministry of Finance (MoF)/the State Planning Organization SPO).
- Legislated into law in the parliament.
- Most important actors are:
  - MoF
  - SPO
- Very rigid system of input controls.
- Salaries of academic and administrative staff determined centrally: neither the univ. nor the CHE has any influence on salary decisions.
- No financial autonomy whatsoever.
Funding State Universities: Income Generation

- Revolving fund system.
- Yet, subject to rigid controls by the MoF.
- Very little flexibility for universities to spend the money they generate as they wish.
- Designed for universities with medical schools – rigid rules on sharing income generated does not make sense for non-medical disciplines and professions.
- Being reformed.
Funding State Universities: Income Generation — Foundations

- Universities establish “philanthropic” organizations to:
  - Fund raising through donations
  - Offer services to the society.

- A “grey zone” operation taking advantage of loopholes in the legislation concerning higher education and the law on foundations.
  - Increasingly frowned upon by the state
Funding State Universities: Tuition?

- Higher education in state universities is practically free.
- Students only make a “contribution” towards health and recreational expenses incurred.
  - Depends on the program but the maximum is about 500 US$ per annum
- Only about 5 percent of all the annual funds available to the universities.
- Politically defended in the name of social justice and public interest – yet???
Funding Foundation (Private) Universities

- Established by non-profit philanthropic foundations.
- Overseen by the CHE.
- Full Financial Autonomy vis-a-vis the state.
  - Institutional autonomy vis-a-vis funders: in the learning stage.
- Charge tuition close to market rates.
  - Decreases their competitiveness since state universities are practically free.
  - To increase competitiveness they devise incentive packages for students composed of scholarships and fellowships.
Funding Foundation (Private) Universities

- No financial restrictions on income generation activities.
- Subsidies from the parent foundation in many cases.
- State contribution as well.
  - According to legislation this may reach fifty percent of their budget.
  - Yet, in practice it comes nowhere close.
  - At Sabancı University less than 1 percent of the budget.
Some Thoughts on What Next

Diversified Sources of Funding for Financial and Institutional Autonomy.
A “Core” Allocation Should Be Provided for Undergraduate Education

- In the standard state universities. This may be calculated directly based on the number of students and by taking the costs of different disciplines into consideration using a simple and transparent formula.
- This core allocation should be supported with
  - a performance based budget,
  - a competitive budget for major new initiatives and developments,
  - another competitive budget to encourage innovation and experimentation
  - Core research funds.
Performance Based Budget

- Should be sufficiently large to be meaningful as a positive incentive, but should not paralyze the institution if it is not secured.
  - The major new initiatives and initiatives to encourage innovation and experimentation should entirely follow transparent evaluation principles in accordance with criteria published in advance.
- Research support should be provided in three categories.
  - Non-competitive bedrock or core funds.
  - Performance based funds should be available to enable institutions develop graduate programs.
  - Competitive funds supporting classical research projects. These categories should be separately evaluated and the development of institutions should be monitored.
Performance Based Budget

- A lump sump budget
- Business account.
- Ability to transfer funds from one year to the other.
  - Experiences of METU and BU in the past.
  - TÜBİTAK as a public organization, still receives its budget in the form of a lump-sum composed of capital investments and recurrent items, and can transfer the unused allocation to the next year. This proves that such flexibility works well in our country.
- Performance, quality assessment to secure accountability.
Donations and Income Generation Initiatives

- Legislation must be overhauled to provide incentives for universities to offer their services (applied research and lifelong education) to the society as service.
- Legislation to facilitate philanthropic donations to state universities.
- An important measure on both counts would be the involvement of stakeholders in university management.
Foundation Universities

- Should establish an endowment fund of such a nature that the interest revenues of the endowment fund should cover at least 20 percent of the annual budget.

- Foundation universities which cannot establish an endowment fund should be supported by the founding foundation through an annual fund not less than 20 percent of the university’s annual budget.

- Diversification of funds will contribute to institutional autonomy.
Sharing The Cost of Higher Education: Tuition

- Why is free higher education is unjust.
- The Turkish context.
  - Imbalances in income distribution
  - Those who are able should pay tuition.
  - Yet, a scholarship, fellowship and loan system is absolutely necessary for the needy.

Higher Education Selection System

- First, the exams exert far too much influence on the lives of those who take them (TED 2005).
- Second, families that can afford to, and even many of those who cannot, spend exorbitant amounts on preparation courses for their children.
  - The average cost of such a preparation program for the OSS exam is US$4,711 (TED 2005).
  - It has generated the exam preparation industry, which absorbs vast amounts of out-of-pocket educational expenditures.
  - Total private expenditure on examination preparation in 2002 were estimated at approximately US$650 million (11.7 percent of total out-of-pocket expenditures), or about one-fifth of what Turkey spends annually on all 81 public universities (Chawla 2004).
