World Indicators of Skills for Employment (WISE) database
List of indicators and conceptual framework

Contextual factors
- GDP
- GNI per capita
- Employment shares by sector
- Trade openness
- Human Development Index
- Total population
- Relative size of youth & urban population
- Early childhood health
- Educational attainment of women with young children
- Access to internet & mobile phones
- Public expenditure on education
- Pupil-teacher ratio (in primary, lower and upper secondary schools)
- Employment in the informal sector
- Ease of doing business

Outcomes
- Growth in GDP
- Labour productivity (per worker and per hour worked)
- Employment rate (total, youth and adult) by education
- Job quality by education (informal; temporary employment)
- Unemployment rate (total, youth and adult) by education
- Youth at risk (total and by school completion)
- Earnings by education and occupation
- Income inequality
- Incidence of poverty

Skill acquisition
- Educational attainment of adult population
- Youth and adult literacy rate
- Cognitive skills of students and adults
- Cross and net enrolment in primary and secondary education
- Primary and secondary education completion rate
- Share of vocational programmes in upper secondary education
- Gross enrolment in tertiary education
- Educational enrolment of young adults
- Share of tertiary graduates and enrolments in STEM subjects
- Participation in apprenticeships
- Participation in education and training by (working) adults

Skill requirements
- Employment shares by level of education
- Employment shares by occupation
- Incidence of self-employment
- Job-task measure of skill use (reading, writing, numeracy, use of IT, communicating, teamwork, learning new things, physical work, manual dexterity) at work
- Job requirements by qualification

Matching
- Skill gaps
- Changes in earnings by education and occupation
- Proportion of overqualified or underqualified workers
- Changes in unemployment by education
