Children with a healthy weight are more likely to perform well at school

- Children are 13% more likely to perform well in school if they have a healthy weight

Source: OECD analyses on the 2013-14 HBSC survey

A 20% reduction of calorie content in energy-dense foods* could lead to...

*across 42 selected countries

- 1.1 million cases of noncommunicable diseases avoided per year
- 13.2 billion (USD PPP) saved every year due to reduced healthcare expenditure
- 1.4 million additional full-time workers per year
- 0.5% increase in GDP

Source: OECD analyses based on the OECD SPHeP-NCDs model

We need to lighten the burden

- The prevalence of obesity & overweight is rising, with enormous negative economic effects
- We should strengthen policies currently in place and close policy gaps, such as with food labelling, advertising policies & promoting food reformulation
- Potential benefits outweigh the cost: Policy packages are effective and offer a positive return on investment
