Old OECD Terms of reference (ToR) (Wave 6 series)

New OECD Terms of reference (ToR) (1) (Wave 7 series)

| Break in series - series are not comparable

(p) Provisional data

Income are based on the distribution of the equivalised disposable household income. Income refer to cash income – excluding imputed components such as home production and imputed rents – regularly received over the year. Data refer to market (i.e. before transfers & taxes) and disposable (i.e. after transfers & taxes) income and its components: earnings (broken down into those of the household head, of the spouse and of other household members); self-employment income; capital income (rents, dividends and interest); public transfers; and household taxes. The analysis refers to the distribution among individuals, while keeping the household as the unit within which income sources are pooled and equally shared. This implies that the income of the household is attributed to each of its members, irrespectively of who in the household receives that income. The income attributed to each person is “adjusted” for household size based on a common but arbitrary equivalence elasticity (the square root of household size) that does not distinguish between adults and children and which implies that a household’s economic needs increase less than proportionally with its size.\* The “square root elasticity” implies that the needs of a household composed of four people are twice as large as those of a single (1.4 and 1.7 times those of a single in the case of a childless couple and of a couple with one child). For further details, see <http://www.oecd.org/els/soc/OECD-Note-EquivalenceScales.pdf>. Income figures are in national currency.

(1) Data calculated according to the new OECD Terms of reference (ToR). Compared to previous terms of reference, these include a more detail breakdown of current transfers received and paid by households as well as a revised definition of household income, including the value of goods produced for own consumption as an element of self-employed income.
