

DAC STATISTICAL FRAMEWORK

Expert workshop on tracking climate finance flows from
the private sector and multilateral development banks

Julia Benn

10 November 2011

DAC statistics on aid and other resource flows to developing countries: coverage

Reporting by donor countries:

	Concessional	Non-concessional
Official	Official development assistance -- Bilateral ODA grants and loans -- Multilateral ODA (core contrib.)	Other official flows (OOF) -- Non-concessional loans (e.g. by DFIs) -- Investment-related transactions -- Export-related transactions
Private	NGO, foundation and other charitable flows	Private flows at market terms -- FDI and portfolio investment -- Export credits -- Bonds

Reporting by multilateral agencies:

	Concessional	Non-concessional
Official	Concessional multilateral outflows	Non-concessional multilateral outflows

Reporting by private entities: at present, B. & M. Gates Foundation

DAC definitions: Official vs. Private

- **Official** transactions are those undertaken by central, state or local government agencies at their own risk and responsibility, regardless of whether these agencies have raised the funds from taxation or borrowing from the private sector.
- **Private** transactions are those undertaken by firms and individuals resident in the reporting country from their own private funds.

DAC definitions: Bilateral vs. Multilateral

- **Bilateral** transactions are those undertaken by a donor country directly with a developing country whether directly implemented by the donor government or through another entity (channel of delivery).
- **Multilateral** contributions are defined using two criteria:
 - Multilateral character of the recipient institution (inter-governmental membership and direction)
 - Multilateral character of the contribution (funds are pooled and unearmarked)
