IFIs - input providers, reviewers

Government partners - advisors, funders

Work streams, interactions and outlook

Key 2014 UNFCCC milestones

When	What	Planned RC deliverable
By May	Request for input on methods to measure and track climate finance	WS1: Preliminary results Part B (OECD) WS2: Final results of Part A (Gaia-ODI) Preliminary results Part B (WRI) Preliminary results Part C (OECD)
June 4-15	Subsidiary Bodies meeting in Bonn	WS1: Final results Part B (OECD) WS2: Final results Part B (WRI)
By October	Completion of the Biennial Assessment	WS2: Final results Part C (OECD)
December 1-12	COP20 in Lima	WS1: Landscape of Climate Finance (CPI) WS2: Synthesis Part D (WRI, OECD)

Emerging common threads across activities

- No comprehensive private finance data series beyond renewables
- The current main focus on project finance monitoring and reporting only provides part of the picture
- Isolating climate-related data from aggregates typically using broad sectoral classifications is a major technical challenge
- Bottom-up systematic private climate finance data collection and reporting faces significant confidentiality and scalability limitations
- The development of more coherent and systematic monitoring and reporting systems is needed in the longer run
- Proxy methods could help overcome some technical challenges to estimating private climate finance and its mobilisation
- Qualitative and quantitative methodological options to measure mobilisation all imply trade-offs; methodological transparency is key
