Public finances are recovering steadily, but public investment remains low

From a modest fiscal surplus of 0.3% of GDP (3.8% structural surplus) and a according to the System of National Accounts definition a very low debt-to-GDP ratio of 27% in 2007, the global financial crisis led to a deficit reaching 13.9% of GDP in 2009 (8.9% structural deficit) and the debt ratio rising to 137% of GDP in 2013. As a result of the consolidation efforts pursued by the government, the deficit level decreased to 4.1% of GDP in 2014 (2.9% structural deficit) and is expected to further shrink in the coming years. Public investment levels are recovering much more slowly: from being the second highest in the OECD at 12.7% of overall public expenditure in 2007, public investment had fallen to the lowest level in the OECD at only 3.5% by 2013, significantly below the OECD average (7.8%). Nonetheless, public investment is slightly recovering as evidenced between 2013 and 2014, when it increased by 1.5 percentage points amounting to 4.9% of overall public expenditure.

Fiscal consolidation has included a large share of administrative expenditure reductions, including in public sector pay

From 2009 to 2014, the overall compensation of government employees decreased by 2.3 percentage points as a share of GDP. In order to reduce government costs, Ireland used virtually the full spectrum of policy measures to reform and control compensation in central government. Pay reductions (with higher reductions for top-level public servants), reduction in allowances and bonuses and ongoing wage freezes have all been applied. More broadly, employment reform tools have included a recruitment freeze, non-replacement of retiring staff and some outsourcing of activities, but without recourse to privatisation or compulsory dismissal.

Satisfaction with public services is above the OECD average, with the exception of health care

The Irish people show among the highest levels of satisfaction across the OECD with the education system (83%) compared to an average of 67% across the OECD, and strong satisfaction with the judicial system (67%) compared to an average 54% for the OECD. However, citizen satisfaction with the health care system (67%) is slightly below the OECD average of 71%.

### GOVERNMENT OUTPUTS AND OUTCOMES

#### Notes

- **Fiscal balance** as reported in the System of National Accounts (SNA) framework, also referred to as net lending (+) or net borrowing (-) of government, is calculated as total government revenues minus total government expenditures.
- **Structural fiscal balance**, or underlying balance, represents the fiscal balance adjusted for the state of the economic cycle (as measured by the output gap which resulted as the difference between actual and potential GDP) and one-off fiscal operations.
- **Government gross debt** is reported according to the SNA definition, which differs from the definition applied under the Maastricht Treaty. It is defined as all liabilities that require payment or payments of interest or principal by the debtor to the creditor at a date or dates in the future. All debt instruments are liabilities, but some liabilities such as shares, equity and financial derivatives are not debt.

### Government at a Glance 2015

With a focus on public administration, OECD Government at a Glance 2015 provides readers with a dashboard of key indicators assembled with the goal of contributing to the analysis and international comparison of public sector performance across OECD countries. Indicators on public finances and employment are provided alongside composite indexes summarising aspects of public management policies, and indicators on services to citizens in health care, education, and justice. Government at a Glance 2015 also includes indicators on key governance and public management issues, such as regulatory management, budgeting practices and procedures, public sector integrity, public procurement and core government results in terms of trust in institutions, income redistribution and efficiency and cost-effectiveness of governments.

The Excel spreadsheets used to create the tables and figures in Government at a Glance 2015 are available via the StatLinks provided throughout the publication:
