Maintaining high levels of properly targeted expenditure, while achieving fiscal consolidation, is a challenge in Argentina

In 2015, public spending in Argentina was the highest in the region, amounting to 44% of GDP. Between 2007 and 2014, government expenditures experienced the second-largest increase in the region. This rise can be attributed mainly to an increase in current expenditure. Fiscal pressures are increasing in Argentina, the budget deficit reached 7.4% of GDP in 2015 and the structural deficits projected for 2016 and 2017 are above 5%. Maintaining high levels of properly targeted public spending while achieving fiscal consolidation, important to retain investors’ confidence, is a key challenge in Argentina.

Public employment in Argentina is above the regional average

In 2014, public employment in Argentina was 18% of total employment, the third largest share in the region, where the average was 12%, and not far below the OECD average of 21.3%. Between 2009 and 2014, government employment as a percentage of total employment increased at a faster pace than the regional average. The increase in Argentina is partially driven by a rise in employment at subnational level in service occupations. However, in late 2015 the government issued decree 254/2015 to review the recruitment processes leading to this increase, the structure of public employment as well as to evaluate the employment needs of the public administration.

Argentina supports e-procurement, but challenges remain in its use

Argentina – like the majority of LAC countries (19 out of 22) surveyed – has made progress in introducing ICT into its procurement system, by setting up an e-procurement portal where procurement opportunities are announced. However, in order to fully reap the benefits from e-procurement, Argentina’s procuring entities must address challenges such as low ICT knowledge and skills and low innovative culture.

Notes

* Tax revenues for Argentina exclude local government revenues but include provincial revenues. Public sector employment as % of total employment and public sector employment filled by women data for Argentina refer to urban areas only. Costs of goods and services financed by general government are not included in government procurement because they are not accounted separately in the IMF Government Finance Statistics (database).

Government at a Glance: Latin America and the Caribbean 2017

*Government at a Glance: Latin America and the Caribbean 2017* is the second edition of a joint publication between the Organization for Economic Co-operation and Development (OECD) and the Inter-American Development Bank (IDB). It provides readers with a dashboard of key indicators to inform policy making and benchmark specific interventions. The model is the OECD *Government at a Glance*, which is a fundamental reference, backed by a well-established methodology for OECD member countries. Compared to the previous edition that had a special focus on Public Financial Management and alongside with indicators on public finances and public employment this second version covers a wider range of public management areas including the role and influence of the Centre of Government, Open Government and Open Data policies, Digital Government, Regulatory Governance and practices for Budgeting in health systems.
