

Table of contents

Foreword	7
Overview	9
I. Why a Green Growth Strategy?	13
<i>Responding to the Ministerial mandate</i>	14
<i>The Interim Report</i>	15
II. A framework for green growth.....	19
III. Preliminary results on key elements of the green growth toolkit..	23
<i>Lessons learned from the stimulus packages</i>	26
<i>Overcoming barriers to green growth: Addressing environmentally harmful subsidies</i>	31
<i>Getting the prices right for green growth: Environmentally-related taxes and tradable permits</i>	36
<i>Green innovation</i>	42
<i>Green growth policies in the energy sector</i>	48
<i>Greener jobs, labour market transition and skills development</i>	54
IV. How do we measure progress towards green growth?	59
<i>A pragmatic approach</i>	59
<i>A measurement framework combining production, consumption and the environment</i>	59
<i>A set of indicators capturing major aspects of green growth</i>	60
V. Delivering the OECD Green Growth Strategy and beyond	63
Bibliography	65
Appendix I. Illustrative indicator examples	67
Air and climate.....	68
Waste and materials.....	68
Energy supply and efficiency	69
Water resources	70
Development aid.....	70
Research and technology development	71
Appendix II. Examples of ongoing work	73

Boxes

Box 1. Contribution of the Green Growth Strategy	14
Box 2. Progress on key environmental challenges.....	16
Box 3. Environmental externalities and market failures	19
Box 4. Key pillars for pro-poor Green Growth	25
Box 5. Employment potential of green components of stimulus packages – some examples	27
Box 6. The scope for moving forward public infrastructure investment	29
Box 7. Car-scrapping schemes and green growth.....	30
Box 8. Agricultural subsidies and green growth	35
Box 9. Examples of renewed interest in CO ₂ -related taxes.....	38
Box 10. Proceeds from auctioned emissions trading permits: some examples	40
Box 11. Addressing carbon leakage and competitiveness impacts of climate policies.....	41
Box 12. Patents and international technology transfer.....	47
Box 13. Transport – a growing source of CO ₂ emissions ¹	52
Box 14. An extension of the OECD ENV-Linkages model.....	56
Box 15. Regional and local implications of a transition towards a low-carbon economy and green growth	58
Box 16. Key principles in selecting indicators to monitor progress with green growth.....	62
Box II.1. The role of regulatory policy and reform	77
Box II.2. Markets and competition.....	79
Box II.3. Consumer policy	80
Box II.4. Responsible business conduct in support of a low carbon economy	81
Box II.5. Taxation, innovation and the environment	82
Box II.6. “Smart” ICT applications enabling green growth	84
Box II.7. Regional innovation systems for eco-innovation	85
Box II.8. New models for international co-operation on eco- innovation	86
Box II.9. Enhancing the cost-effectiveness of biodiversity policies.....	87
Box II.10. Outcome of the February 2010 OECD Agriculture Ministerial Meeting.....	88
Box II.11. Relevant work for green growth measurements	89

Figures

Figure 1. Overview of the Green Growth Strategy Framework	24
Figure 2. The effects on greenhouse gas emissions of removing fossil fuel subsidies in emerging and developing countries combined with caps on emissions in developed countries	32
Figure 3. Impact of unilateral removal of fossil fuel subsidies on the real income of selected countries and regions.....	33
Figure 4. Impact of multilateral fossil fuel subsidy removal on GDP...	34
Figure 5. Environmentally-related taxes revenues	37
Figure 6. Innovation trend in climate change mitigation technologies, compared to all sectors	43
Figure 7. Global venture capital amounts: smart grids vs. overall clean technologies	45
Figure 8. The innovation-science link in “green” technologies, 2000-07	46
Figure 9. Combination framework of policy incentives as a function of renewable technology maturity	51
Figure 10. Framework for Green Growth Indicators	62
Figure I.1. Emission trends and GDP growth	68
Figure I.2. Emission intensities	68
Figure I.3. Waste generation, materials use and GDP growth.....	68
Figure I.4. Energy use and GDP growth.....	69
Figure I.5. Energy intensity, 2007	69
Figure I.6. Share of renewable energy ¹	69
Figure I.7. Water abstractions and GDP growth	70
Figure I.8. Water use intensities, mid 2000s	70
Figure I.9. Aid ¹ targeting the Rio Conventions	70
Figure I.10. Patents in selected environmental technologies.....	71
Figure I.11. Share of countries in environmental technology patents filed under PCT ¹	71
Figure I.12. Public spending in energy- and environment-related R&D	72

Tables

Table 1: Declared country targets and actions to reduce GHG emissions and their revenue potential.....	17
Table 2. Some estimates of subsidies to selected sectors	31
Table II.1. Conditions favourable to the use of specific instruments ..	74
Table II.2. Green industries by broad sector of activity and broad environmental area	76
