ITEM 3B
CURRENT STEEL MARKET DEVELOPMENTS

Steel Committee, September 2017

Fabien Mercier, Hokuto Otsuka, Filipe Silva
Emails: fabien.mercier@oecd.org, filipe.silva@oecd.org
Outline

1. Consumption
2. Production
3. Trade
4. Prices
5. Financial performance
6. Steel intensive sectors
7. Concluding remarks
Consumption

Consumption of hot-rolled steel products, major economies
% change from one year earlier

Note: Combined consumption of hot-rolled steel products of the following economies: Brazil, China, Germany, India, Japan, Korea, Russia and the United States. Consumption of hot-rolled products defined as the sum of production and net imports. Only first two months of 2017 where available.
Production

World crude steel production developments in 2016 and 2017

</table>

The increase of production was mostly felt in the Middle East, in Africa, in China and in Other Europe, whereas North America stagnated and the CIS production dropped.
World exports of steel: monthly volume (mmt) and export ratio (% of production, 3-month moving averages)

A. Including intra-EU trade  
B. Excluding intra-EU trade

The export ratio, excluding intra-EU trade, continues to decline.
Prices

Margin between steel and raw materials prices

It seems that each time high margin occurs, both prices end up on a downward trend.
Financial performance

Evolution of net profits between 2000 and 2016

Evolution of indebtedness between 2000 and 2016
Steel intensive sectors

- **Real estate construction** will probably not be able to prop up steel demand, since construction indicators remain at similar levels than during previous years.
- **Car production** has continued to fall in the United States, to increase in China, and to remain flat in most of the other markets.
- **The shipbuilding sector** will remain in excess capacity for the next 15 years (OECD study: “Imbalances in the shipbuilding industry and assessment of policy responses”).
- **Oil ring counts** are still low, and gas and oil prices could have reached a plateau.
Concluding remarks

- The market situation of the steel industry has improved only modestly compared to its 2015 lows and its recovery is expected to remain sluggish.
- Industry should take advantage of this breathing space to deleverage and restructure, to focus on quality rather than quantity, to adapt to the digitalisation of the economy and to address pressing environmental challenges.
- Policymakers should seek to remove barriers to exit, to abstain from direct and indirect forms of support, and to ensure that adequate bankruptcy regulations are in place while mitigating specific closure costs.
Thank you for your attention
ANNEXES: steel intensive sectors
Steel intensive sectors

Flows to Chinese and Indian real estate:
A. China (y-o-y growth rate)  
B. India (in million rupees)

New building permits or house started in the U.S., Japan and Germany:
Steel intensive sectors

Car production in selected economies
Units, monthly production (United States on the right side scale)
Steel intensive sectors

Ship completions and future vessel requirements

B. Future vessel requirements (2015 – 2035)

Future vessel requirements are not expected to equal the peak of completions that was reached in 2011 before 2030 and, without capacity closures, the shipbuilding industry is likely to remain in excess capacity for the next 15 years (OECD study).
Steel intensive sectors

Oil rig count, and oil and gas prices

A. World rig count

B. Oil and gas prices
