SUBJECT: ADMINISTRATOR (GRADE A2/A3), NUCLEAR DEVELOPMENT DIVISION, NUCLEAR ENERGY AGENCY

Closing date for applications: The closing date for applications is 2nd September 1991.
N.B. This post will be vacant on 7th February 1992.

Duties:

• Under the supervision of the Head of Division and in collaboration with senior professional staff, to carry out technical and economic studies on matters of nuclear energy development and the nuclear fuel cycle.

1. Compilation (partly computer compilation) and critical evaluation of data on nuclear development and nuclear fuel cycle supply and demand.

2. Co-ordinate studies, publications and symposia on economic and technical factors influencing policy decisions on nuclear energy programmes.

3. Participation in the secretariat of technical committees and expert groups in the nuclear development and fuel cycle area.
4. Preparation of reports for consideration both at technical and at technical policy level in various areas mentioned above.

5. Contribution to the implementation and co-ordination of technical activities related to various technical and policy subjects, including setting up of co-operative R & D projects.

Principal Qualifications:

1. University degree in nuclear engineering or equivalent qualifications.

2. Experience or expertise in analysis of the use of nuclear power including one or more of the following: assessment of reactor technology developments, assessment of fuel cycle supply and demand, economics of nuclear energy, nuclear project planning and related technical policy questions.

3. Experience in handling policy questions at the interface between government and nuclear industry.

4. Ability to deal with experts at all levels in national and international administrations and in industry.

5. Very good working knowledge and drafting abilities in one of the official languages of the Organisation (French and English); knowledge of the other language would be of considerable advantage.
