Measurement challenges and innovative solutions for capturing financial corporations

Monday, 6 November, 11:40 am - 1:00 pm

Financial corporations are part of a very sophisticated and fast evolving industry. This presents measurement challenges when countries try to appropriately record and measure the financial activities according to the 2008 SNA. For example, how do countries capture some of the very complex structures (e.g., layers of trusts) that investment managers set up for their clients on a 2008 SNA basis? How do they monitor and estimate transactions and positions of SPEs, holdings, and other newly established types of financial corporations (or financial instruments). In addition, the demand for more data may have created measurement challenges when the usual sources are not available forcing countries to find innovative solutions (such as big data) to address the questions. Under this item, countries will present on the measurement challenges they face and innovative solutions they use to overcome these measurement challenges.
