

Stable growth momentum going forward in the OECD area

Composite leading indicators (CLIs), designed to anticipate turning points in economic activity relative to trend six to nine months ahead, continue to point to stable growth momentum in the **OECD area** as a whole.

The CLIs for the **United States, Japan, Canada** and the **euro area** as a whole, including **France**, continue to anticipate stable growth momentum. In **Germany** and **Italy**, growth is expected to gain momentum. However, in the **United Kingdom** the outlook has continued to deteriorate, with stronger signals of easing growth.

Amongst major emerging economies, the CLIs point to signs of growth gaining momentum in the industrial sector in **China** and to growth firming in **Brazil**. In **Russia** and **India** the assessment remains for stable growth momentum.

Stable growth momentum in the OECD area

Signs of growth gaining momentum in China

Stable growth momentum in the United States

Stable growth momentum in the Euro area

The above graphs show country specific composite leading indicators (CLIs). Turning points of CLIs tend to precede turning points in economic activity relative to trend by approximately six months. The horizontal line at 100 represents the trend of economic activity. Shaded triangles mark confirmed turning-points of the CLI. Blank triangles mark provisional turning-points that may be reversed.

Methodological Notes:
