

G20 GDP growth stable at 0.7% in second quarter of 2015

Real Gross Domestic Product (GDP) in the **G20 area** grew by 0.7% in the second quarter of 2015, the same rate as in the first quarter, but with diverging patterns across countries, according to preliminary estimates.

GDP growth accelerated strongly in the **United States** in the second quarter (to 0.9%, compared with 0.2% in the previous quarter). GDP growth also accelerated in **China** (to 1.7% compared with 1.4% in the previous quarter) and in the **United Kingdom** (rising to 0.7% from 0.4%). In **Mexico** and **Germany**, growth was 0.5% and 0.4%, respectively, in the second quarter compared with 0.4% and 0.3% in the previous quarter. GDP growth remained unchanged in **Indonesia** at 1.1%.

GDP growth slowed among other G20 economies in the second quarter of 2015. In **Japan**, GDP fell 0.3%, compared with growth of 1.1% in the previous quarter while in **Brazil** GDP fell 1.9%, compared with a drop of 0.7% in the previous quarter. In **South Africa** GDP fell 0.3%, compared with growth of 0.3% in the previous quarter. In **Australia** and **France**, GDP growth slowed markedly (to 0.2% and 0.0%, respectively, compared with 0.9% and 0.7% in the previous quarter).

Compared with the same quarter of 2014, GDP for the **G20 area** expanded by 3.2% in the second quarter of 2015, the same growth rate as in the previous quarter, with **India** recording the highest growth rate (7.2%), followed by **China** (7.0%). **Brazil** recorded the largest contraction (minus 2.4%).

News Release: G20 GDP growth, second quarter of 2015

Technical note for IAG G20 GDP News Release: GDP growth in volume

Gross Domestic Product (GDP) is the standard measure of the value of the goods and services produced by a country during a reference period. The estimate of GDP growth for the G20 aggregate is produced by the OECD Secretariat. It is based on quarterly seasonally adjusted data reported by G20 countries and Eurostat, and, if country data are not available, on estimates from the OECD's Secretariat.

Country notes

The statistical data in this publication are supplied by and under the responsibility of the relevant statistical authorities. The use of such data by the OECD is without prejudice the status of or sovereignty over any territory, or to the delimitation of international frontiers and boundaries.

Argentina – The data for Argentina reported here and used for the calculation of the G20 aggregate are obtained from publicly available, official national statistics sources. The IMF has, however, issued a declaration of censure and called on Argentina to adopt remedial measures to address the quality of the official GDP data. Alternative data sources have shown significantly lower real growth than the official data since 2008. In this context, the Fund is also using alternative estimates of GDP growth for the surveillance of macroeconomic developments in Argentina. Misreporting may affect the G20 aggregate though not significantly, given the low weight (around 1%) of Argentina's GDP in the GDP of the zone.

However, users should exercise caution when comparing the results for Argentina with other countries since compliance with international data quality standards and international comparability of data for Argentina have not been systematically assessed.

China – China is part of the G20 aggregate for all quarters. Data shown in the tables correspond to official figures from the National Bureau of Statistics of China. Quarterly data prior to 2011Q1 are based on estimates from the OECD's Economics Department, which are not shown in the tables.

Russian Federation - Quarterly estimates for the last quarter are based on annual forecasts released by the OECD's Economics Department in the "[Economic Outlook, June 2015](#)". These estimates are not shown in the tables but are used in the G20 aggregate calculation.

Saudi Arabia – Quarterly estimates are based on estimates from the OECD's Statistics Directorate. While these estimates are not shown in the tables, Saudi Arabia is part of the G20 aggregate for all quarters.

The seasonally adjusted data includes a working-day correction for all G20 countries except Argentina, Brazil, China, India, Indonesia, Saudi Arabia, and South Africa. When seasonally adjusted national data are not available, data are adjusted by the OECD's Statistics Directorate with the TRAMO/SEATS method; this is the case for Argentina, India and Indonesia. Figures for the G20 aggregate are calculated from seasonally adjusted data of the countries (*i.e.* the indirect method). Growth over the previous quarter is not annualised in this News Release. The charts presented in this News Release are based on data with more than one decimal.

Growth rates for the G20 are derived from chained volume estimates in US dollars converted using 2005 Purchasing Power Parities (PPPs) of GDP.

Implementation of SNA 2008 / ESA 2010 methodology

National accounts data are progressively compiled by countries according to the new SNA 2008 / ESA 2010 standards. Find more information on the change of methodology and its impact on GDP at the following link: <http://www.oecd.org/std/na/sna-2008-main-changes.htm>

Country coverage

The G20 aggregate consists of the following: Argentina, Australia, Brazil, Canada, China, France, Germany, India, Indonesia, Italy, Japan, Korea, Mexico, the Russian Federation, Saudi Arabia, South Africa, Turkey, the United Kingdom, the United States, and the European Union. The G20 aggregate is calculated taking the fifteen individual country members of the G20 (other than France, Germany, Italy and the United Kingdom) plus the European Union as an aggregate.
