

OECD Services Trade Restrictiveness Index (STRI): Hungary

Hungary exported services worth USD 22 billion and its services import value was USD 16 billion in 2016. Transport services are Hungary's largest services export category while professional and management consultancy services attract the largest imports in the economy. Hungary's score on the STRI in 21 sectors is shown below, along with the average and the lowest score among the 44 countries included in the STRI database for each sector.

STRI by sector and policy area

Note: The STRI indices take values between zero and one, one being the most restrictive. They are calculated on the basis of the STRI regulatory database which contains information on regulation for the 35 OECD Members, Brazil, China, Colombia, Costa Rica, India, Indonesia, Lithuania, Russia and South Africa. The STRI database records measures on a Most Favoured Nations basis. Preferential trade agreements are not taken into account. Air transport and road freight cover only commercial establishment (with accompanying movement of people). Maritime transport services are not covered for landlocked countries.

Horizontal policy measures

Hungary has a lower score on the STRI than the average in nine out of the 21 sectors. This can be explained in large part by general regulations that apply to all sectors in the economy. The number of work permits issued to non-EU nationals seeking to provide services on a temporary basis as intra-corporate transferees, contractual services suppliers or independent services suppliers is subject to quotas and labour market testing. Rights of access to public procurement are limited to regional trade agreement partners and members of the WTO's Government Procurement Agreement. The standards for cross-border transfer of personal data are set at the EU level. Transfers to non-EEA economies can only take place when these ensure an adequate level of protection that is substantially similar to that required in the EU or when private data processors, both senders and receivers, establish various safeguards approved by the data protection authorities. Finally, a minimum amount of capital must be deposited in a bank or with a notary in order to register a corporation.

The sectors with the relatively lowest STRI scores

Broadcasting, courier services, and telecommunications services are the three sectors with the lowest score relative to the average STRI across all countries. In broadcasting services, sector specific restrictions include quotas on broadcast time, affecting also on-demand streaming services and tax reliefs for the production of television programmes reserved to productions passing a cultural test. In courier services, there are few sector-specific limitations. The Hungarian state maintains control of the designated postal operator which is exempt from tax obligations until 2020. In telecommunications services, next to economy-wide restrictions, contracts for universal services obligations are not assigned on a competitive basis.

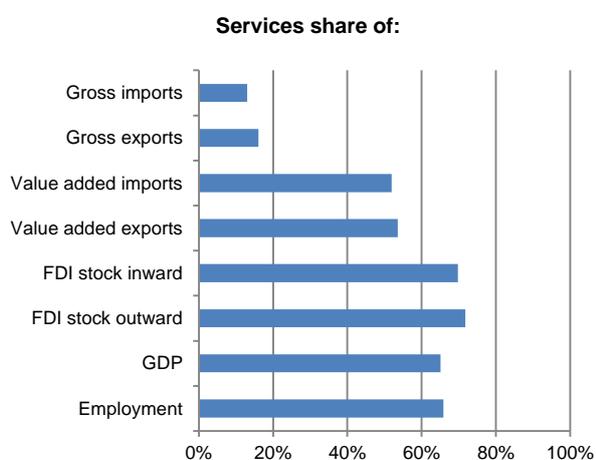

The sectors with the relatively highest STRI scores

Legal services, computer services and engineering services are the three sectors with the highest score relative to the average STRI across all countries. In legal services only licensed lawyers may own, manage or sit on the board of law firms. To obtain a license to practice, nationality of a European Union or European Economic Area member state is required. Foreign lawyers are limited to providing legal advice on foreign and international law through associations with a local attorney or law firm, and cannot establish a law firm. In engineering services, non-EU nationals must have a domicile or permanent residency in Hungary in order to obtain a license to practice and temporary licenses are not granted. In computer services, Hungary's horizontal regulations contribute to the relatively high score.

Recent policy changes

Since 2015, Hungary applies quotas on work permits for natural persons with non-EU nationalities travelling on a temporary basis to the country. Such work permits are required for services suppliers as well. As of 2016, intra-corporate transferees from third countries can stay in Hungary up to 12 months on their initial permits.

Efficient services sectors matter

Services account for 16% of gross exports but for 53% in value added terms. This indicates that Hungary's exports of goods rely intensively on services inputs. Services account for 65% of GDP and a slightly higher share of employment, which implies that earnings and aggregate demand depends crucially on productivity in the services sectors. The information and communication technology revolution opens new opportunities for inclusive growth in a services economy like Hungary. Innovation and adoption of technology relies on access to knowledge and to the networks, people, goods and services that carry the knowledge around the world. In this context, Hungary could benefit from more open markets for services trade through the temporary movement of natural persons.
