

OECD Services Trade Restrictiveness Index (STRI): India

India exported services worth USD 161 billion and its services imports amounted to USD 133 billion in 2016. The largest services exports category was computer services and the largest import categories were travel and insurance services. India's score on the STRI index in the 22 sectors is presented below along with the average and the lowest score among the 44 countries included in the STRI database for each sector.

STRI by sector and policy area

Note: The STRI indices take values between zero and one, one being the most restrictive. They are calculated on the basis of the STRI regulatory database which contains information on regulation for the 35 OECD Members, Brazil, China, Colombia, Costa Rica, India, Indonesia, Lithuania, Russia and South Africa. The STRI database records measures on a Most Favoured Nations basis. Preferential trade agreements are not taken into account. Air transport and road freight cover only commercial establishment (with accompanying movement of people).

Horizontal policy measures

India has a STRI score above average in all sectors. Services trade through FDI is governed by the “Consolidated FDI Policy” (the current version in force since 28 August 2017). Sectors are categorised into two groups: prohibited sectors and permitted sectors. In the permitted sectors investment can take place either through the government route through which prior approval is needed, or the automatic route where no approval is required. In some sectors the automatic route applies up to a certain threshold beyond which approval is needed. Additional horizontal measures affecting all sectors are regulations on transfers of shares between residents and non-residents, which are subject to pricing guidelines, and regulations on mergers and acquisitions, which usually take place through the establishment of a holding company in India. India applies labour market tests for natural persons seeking to provide services in the country on a temporary basis as intra-corporate transferees, contractual services suppliers or independent services suppliers. These categories may stay in the country for up to 24 months on their first entry permit. However, multiple entry business visas are awarded for up to five years with each stay limited to six months. At least one of the board members and the manager in corporations must be residents of India. Finally, there are preferences for local suppliers in public procurement.

The sectors with the relatively lowest STRI scores

Engineering services, road freight transport, and logistics customs brokerage are the three sectors with the lowest score relative to the STRI across all countries. In all three sectors, however, the scores are still higher than the mean. All three sectors follow the automatic route up to 100% equity share. Engineering is not a regulated profession at the national level and the sector is subject to the general policy framework. There are also few sector-specific restrictions in road freight transport, although the states have the power to regulate freight rates. The main restrictions on customs brokerage is a nationality and residency requirement for obtaining a license as a customs broker.

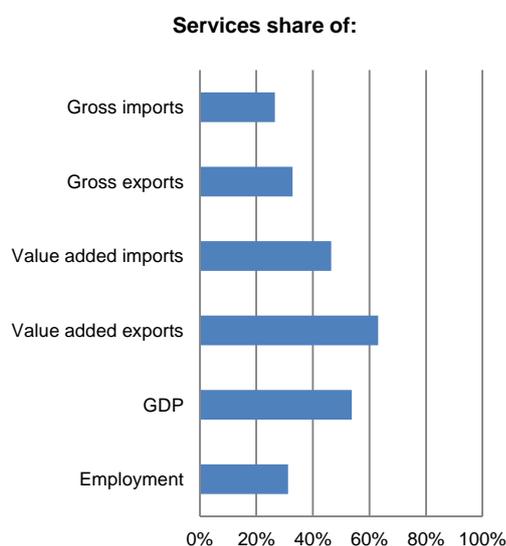

The sectors with the relatively highest STRI scores

Rail freight transport, accounting services and insurance, are the three sectors with the highest score relative to the average STRI across all countries. Railway operations are on the list of prohibited sectors and are reserved for Indian Railways, a state-owned enterprise. This together with no significant transit rights for foreign suppliers closes the market for international trade. Nevertheless, 100% foreign equity is permitted through the automatic route for construction, operation and maintenance of railway infrastructure. Accounting and auditing are reserved for licenced accountants and auditors. Foreign accounting and auditing firms or professionals can only access the Indian market through a limited license for a specific project or time period. In insurance services there is a foreign equity limit of 49%, licenses are subject to economic needs tests, premiums are regulated, foreign reinsurers face stricter conditions for obtaining a license than local companies, and there are limits on the share of risks that can be ceded to reinsurers.

Recent policy changes

In 2015 India lifted foreign equity limits from 26% to 49% in the insurance sector and foreign branches were permitted in reinsurance. Further investment liberalisation took place in 2016 when foreign equity limits were removed for airport services and cable and satellite broadcasting and foreign equity limits were eased in civil aviation. Minimum capital requirements for establishing a company were eliminated in most sectors in 2016. On the other hand, India introduced an equalization levy of 6% on purchases of advertising services from non-resident companies in 2017.

Efficient services sectors matter

Services account for a higher share of GDP than employment, which indicates that labour productivity is higher in services than in other sectors. Services account for more than 30% of gross exports, among the highest of the 44 countries included in the STRI project, and more than 60% of value added exports. The Trade in Value Added (TiVA) database reports that exports of machinery and motor vehicles have the highest services content in India. The OECD trade in value added database and the STRI together provide a powerful tool for assessing regulatory bottlenecks and regulatory spillovers that may hinder the objectives of attracting more manufacturers through the “Make in India” initiative.

The information and communication technology revolution opens new opportunities for inclusive growth in India. Innovation and adoption of technology relies on access to knowledge and to the networks, people, goods and services that carry the knowledge around the world. In this context, India could benefit from more open markets for services trade.
