

Latvia

Figure 51. Proportion of CO₂ emissions from energy use subject to different levels of effective carbon rates in Latvia in 2015

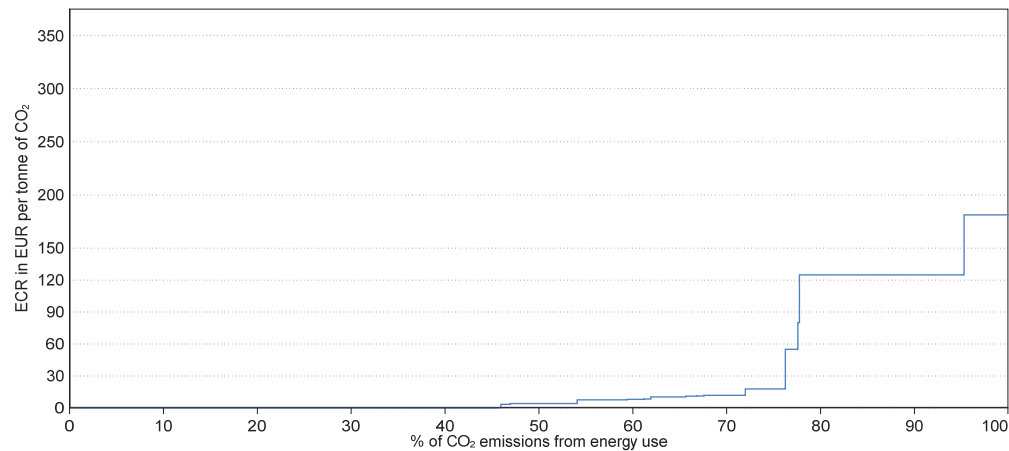

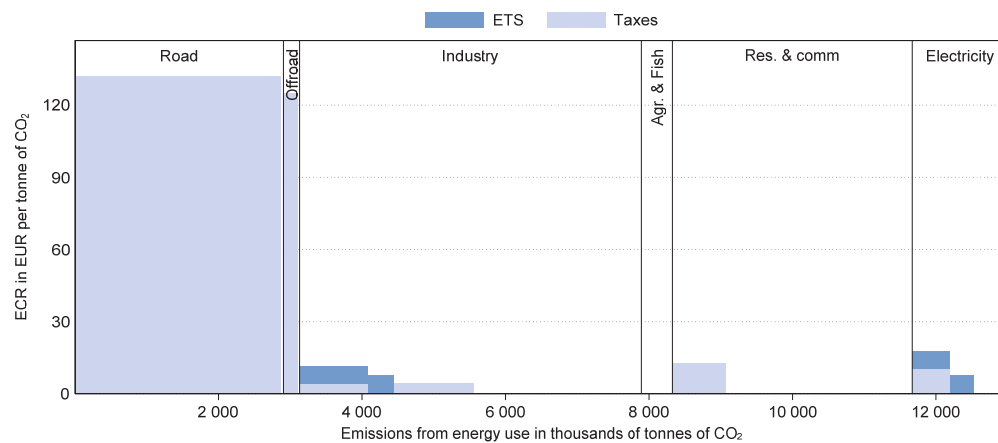

Figure 52. Average effective carbon rates in Latvia by sector and component in 2015

In 2015, effective carbon rates in Latvia consisted of specific taxes on energy use and permit prices from the ETS. Latvia did not have an explicit carbon tax. Latvia priced 55% of carbon emissions from energy use, and 24% were priced above EUR 30 per tonne of CO₂ (see Figure 49). The majority of these emissions were from the road transport sector (see Figure 50). Carbon pricing from the EU ETS covered over a quarter of emissions in the industry sector and nearly two-thirds of emissions in the electricity sector.
