

Revenue from environmentally related taxes in Mexico¹

As a share of GDP, Mexico has the lowest environmentally related tax revenue among 34 OECD and 5 partner economies. In 2014, environmentally related tax revenues were at -0.42% of GDP, compared to 2.0% on average among the 39 countries.

Environmentally related tax revenue as a percentage of GDP, 2014

¹Data from OECD.Stat include all OECD countries (except Latvia) and Argentina, Brazil, China, India and South Africa. Please see OECD.Stat for country specific notes.

Taxes on energy use in Mexico²

The [OECD's Taxing Energy Use \(2015\)](#) publication compares taxes on energy use (excise and carbon taxes) across 34 OECD and 7 partner economies. The chart below shows average tax rates, expressed in EUR per GJ, by sector across all fuels and the economy-wide average. The bubble size represents the weight of the sector in total energy use.

- » Mexico has higher average tax rates on transport fuels (0.57 EUR/GJ) than on fuels used for heating and process purposes (0.01 EUR/GJ) or electricity generation (0.01 EUR/GJ). Since 2012 Mexico significantly increased level and coverage of energy taxes.
- » Mexico has the 2nd lowest tax rate on energy on an economy-wide basis, at EUR 0.18 per GJ, compared with EUR 2.7 per GJ on a simple-average basis across the 34 OECD and 7 partner economies.

Average tax rates on energy in transport, heating and process use, and electricity generation

²Data from *Taxing Energy Use* are for 2012 and include all OECD countries (except Latvia) and Argentina, Brazil, China, India, Indonesia, Russia and South Africa.

Effective carbon rates in Mexico

The [OECD's Effective Carbon Rates \(2016\)](#) publication presents the combined price signal on CO₂ emissions from taxes on energy and emissions trading systems (ETS), or the effective carbon rate (ECR).³ The charts below show shares of CO₂ emissions subject to different price ranges, for road, non-road and all emissions from energy use. EUR 30 is a conservative estimate of the climate damage from one tonne of CO₂ emissions.

- » In Mexico, 67% of carbon emissions from energy use face no price signal at all; 33% face a price at or above EUR 5 per tonne of CO₂; and 0% face a price at or above EUR 30 per tonne of CO₂. This compares to a zero price for 60% of emissions across all countries, a price at or above EUR 5 per tonne for 30% and at or above EUR 30 per tonne for 10% of emissions.

- » Excluding road use, 97% of carbon emissions from energy use in Mexico face no price signal at all; 3% face a price at or above EUR 5 per tonne of CO₂; and 0% face a price at or above EUR 30 per tonne of CO₂. This compares to a zero price for 70% of emissions across all countries, a price at or above EUR 5 per tonne for 19% and at or above EUR 30 per tonne for 4% of emissions.

Distribution of Effective Carbon Rates (ECR) on CO₂ emissions from energy use in Mexico

Figures shown in the charts may not add up to 100% due to rounding.

³Notes on the interpretation of effective carbon rates: Box 3.1 (p.38-40), OECD's Effective Carbon Rates (2016), or consult <http://oe.cd/ECRinterpretation>

CO₂ emissions priced and average rates in Mexico

The table below shows the average price signals from taxes and trading systems, and the share of emissions priced by these instruments.

- » Mexico does not currently have an ETS.
- » In total, taxes in Mexico price 33% of CO₂ emissions from energy use. The sectors with the highest tax coverage are road transport (99%) and offroad transport (95%).

Share of emissions priced and average price signals from tax, Mexico

CO ₂ emissions by sector (in t CO ₂)	Tax		ETS		Overlap of tax and ETS ⁵	Emissions not priced by tax or ETS
	Average price (in EUR/tCO ₂)	Share of emissions priced	Average price (in EUR/tCO ₂)	Share of emissions priced		
Agriculture & Fishing	9 417	0.0	0%	0.0	0%	100%
Electricity	119 034	6.5	1%	0.0	0%	99%
Industry	147 765	6.5	4%	0.0	0%	96%
Offroad transport	4 296	6.5	95%	0.0	0%	5%
Residential & Commercial	52 483	6.5	1%	0.0	0%	99%
Road transport	150 420	8.2	99%	0.0	0%	1%
Total⁴	483 416	2.7	33%	0.0	0%	67%

Access the data for all 41 countries: <http://oe.cd/emissionsdata>

⁴Total average prices are weighted by the share of emissions in each sector that is priced in the country.

⁵Tax and ETS can apply to the same emissions base. The overlap describes the percentage of emissions in a sector that is priced by both tax and ETS.
