Revenue from environmentally-related taxes in Russia¹

The figure below shows environmentally-related tax revenue among 34 OECD and 5 partner economies. In 2014, environmentally-related tax revenues were at 2.0% on average among the 39 countries. Currently this data is not available for Russia.

Taxes on energy use in Russia²

The OECD’s Taxing Energy Use (2015) publication compares taxes on energy use (excise and carbon taxes) across 34 OECD and 7 partner economies with tax rates expressed in EUR per GJ. The chart below shows average tax rates by sector across all fuels and the economy-wide average. The bubble size represents the weight of the sector in total energy use.

Russia has higher average tax rates on transport fuels (0 EUR/GJ) than on fuels used for heating and process purposes (0 EUR/GJ) or electricity generation (0 EUR/GJ);

Russia has the lowest tax rate on energy on an economy-wide basis, at EUR 0 per GJ, compared with EUR 2.7 per GJ on a simple-average basis across the 34 OECD and 7 partner economies.

Average tax rates on energy in transport, heating and process use, and electricity generation

¹Data from the OECD.Stat include all OECD countries (except Latvia) and Argentina, Brazil, China, India and South Africa. Please see source for country specific notes.

²Data from Taxing Energy Use are for 2012 and include all OECD countries (except Latvia) and Argentina, Brazil, China, India, Indonesia, Russia and South Africa.

Effective carbon rates in Russia

According to the **OECD’s Effective Carbon Rates (2016)** publication, the combined price signal on CO₂ emissions from taxes on energy and emissions trading systems (ETS) gives the effective carbon rate (ECR). The charts below show shares of CO₂ emissions subject to different price ranges, for road, non-road and all emissions from energy use. EUR 30 is a conservative estimate of the climate damage from one tonne of CO₂ emissions.

In Russia, 87% of carbon emissions from energy use face no price signal at all; 0% face a price at or above EUR 5 per tonne of CO₂; and 0% face a price at or above EUR 30 per tonne of CO₂. This compares to a zero price for 60% of emissions across all countries, a price at or above EUR 5 per tonne for 30% and at or above EUR 30 per tonne for 10% of emissions.

Excluding road use, 95% of carbon emissions from energy use in Russia face no price signal at all; 0% face a price at or above EUR 5 per tonne of CO₂; and 0% face a price at or above EUR 30 per tonne of CO₂. This compares to a zero price for 70% of emissions across all countries, a price at or above EUR 5 per tonne for 19% and at or above EUR 30 per tonne for 4% of emissions.

**Distribution of Effective Carbon Rates (ECR) on CO₂ emissions from energy use in Russia**

**Notes on the interpretation of effective carbon rates:** Box 3.1 (p.38-40), OECD’s Effective Carbon Rates (2016), or consult [http://oe.cd/ECRinterpretation](http://oe.cd/ECRinterpretation)

Figures shown in the charts may not add up to 100% due to rounding

**CO₂ emissions priced and average rates in Russia**

The table below shows the average price signals from taxes and trading systems, and the share of emissions priced by these.

- Russia is subject to the 0 ETS, which had an average permit price of EUR 0 per tonne of CO₂ 0.

- In total, taxes in Russia price 13% of CO₂ emissions from energy use. The sectors with the highest tax coverage are road transport (99%) and agriculture and fisheries (82%).

Access the data for all 41 countries: [http://oe.cd/emissionsdata](http://oe.cd/emissionsdata)

Footnotes:
1. Total average prices are weighted by the share of emissions in each sector that is priced in the country.
2. Tax and ETS can apply to the same emissions base. The overlap describes the percentage of emissions in a sector that is priced by both tax and ETS.
