Taxing Wages - Austria

Tax on labour income

The *tax wedge* is a measure of the tax on labour income, which includes the tax paid by both the employee and the employer.

**TAX WEDGE ON LABOUR INCOME**

\[
\text{Tax wedge} = \left(\frac{\text{Total labour costs (gross wages + employer SSCs)}}{\text{Personal income tax + employee and employer social security contributions (SSCs)} - \text{Family Benefits}}\right) 
\]

**Single worker**

The tax wedge for the average single worker in Austria increased by 0.3 percentage points from 47.6 in 2018 to 47.9 in 2019. The OECD average tax wedge in 2019 was 36.0 (2018, 36.1). In 2019 Austria had the 4th highest tax wedge among the 36 OECD member countries, occupying the same position in 2018.

In Austria, income tax and employer social security contributions combine to account for 71% of the total tax wedge, compared with 76% of the total OECD average tax wedge.

**One-earner married couple with two children**

The tax wedge for a worker with children may be lower than for a worker on the same income without children, since most OECD countries provide benefits to families with children through cash transfers and preferential tax provisions.

Austria had the 10th highest tax wedge in the OECD for an average married worker with two children at 33.7% in 2019, which compares with the OECD average of 26.4%. The country occupied the 8th highest position in 2018.

Child related benefits and tax provisions tend to reduce the tax wedge for workers with children compared with the average single worker. In Austria in 2019, this reduction (14.2 percentage points) was greater than the OECD average (9.6 percentage points).
**Tax wedge trends between 2000 and 2019**

In Austria, the tax wedge for the average single worker increased by 0.6 percentage points from 47.3% to 47.9% between 2000 and 2019. During the same period, the average tax wedge across the OECD decreased by 1.4 percentage points from 37.4% to 36.0%.

Since 2009, the tax wedge for the average single worker remained at the same level in Austria. During this same period, the tax wedge for the average single worker across the OECD increased by 0.5 percentage points.

**Average tax wedge over time for a single worker**

In Austria, the average single worker faced a net average tax rate of 33.2% in 2019, compared with the OECD average of 25.9%. In other words, in Austria the take-home pay of an average single worker, after tax and benefits, was 66.8% of their gross wage, compared with the OECD average of 74.1%.

Taking into account child related benefits and tax provisions, the employee net average tax rate for an average married worker with two children in Austria was reduced to 15.0% in 2019, which is the 20th highest in the OECD, and compares with 14.6% for the OECD average. This means that an average married worker with two children in Austria had a take-home pay, after tax and family benefits, of 85.0% of their gross wage compared to 85.4% for the OECD average.
