Taxing Wages - The Netherlands

Tax on labour income

The *tax wedge* is a measure of the tax on labour income, which includes the tax paid by both the employee and the employer.

**TAX WEDGE ON LABOUR INCOME**

\[
\text{((Personal income tax + employee and employer social security contributions (SSCs)) \quad \text{-- \quad Family Benefits)} \quad \text{(Total labour costs (gross wages + employer SSCs))}}
\]

**Single worker**

The tax wedge for the average single worker in the Netherlands decreased by 0.5 percentage points from 37.8 in 2018 to 37.3 in 2019. The OECD average tax wedge in 2019 was 36.0 (2018, 36.1). In 2019 the Netherlands had the 18th highest tax wedge among the 36 OECD member countries, compared with the 19th in 2018.

In the Netherlands, income tax and employer social security contributions combine to account for 68% of the total tax wedge, compared with 76% of the total OECD average tax wedge.

**Average tax wedge: average single worker, no children**

![Chart showing average tax wedge for single workers in various countries, with the OECD average at 36.0% in 2019.](chart)

**One-earner married couple with two children**

The tax wedge for a worker with children may be lower than for a worker on the same income without children, since most OECD countries provide benefits to families with children through cash transfers and preferential tax provisions.

The Netherlands had the 12th highest tax wedge in the OECD for an average married worker with two children at 32.3% in 2019, which compares with the OECD average of 26.4%. The country occupied the same position in 2018.

Child related benefits and tax provisions tend to reduce the tax wedge for workers with children compared with the average single worker. In the Netherlands in 2019, this reduction (4.9 percentage points) was less than the OECD average (9.6 percentage points).

**Average tax wedge: One-earner married couple at average earnings, 2 children**

![Chart showing average tax wedge for married couples with two children in various countries, with the OECD average at 26.4% in 2019.](chart)
In the Netherlands, the tax wedge for the average single worker decreased by 2.7 percentage points from 40.0% to 37.3% between 2000 and 2019. During the same period, the average tax wedge across the OECD decreased by 1.4 percentage points from 37.4% to 36.0%.

Since 2009, the tax wedge for the average single worker decreased by 0.7 percentage points in the Netherlands. During this same period, the tax wedge for the average single worker across the OECD increased by 0.5 percentage points.

The employee net average tax rate is a measure of the net tax on labour income paid directly by the employee.

In the Netherlands, the average single worker faced a net average tax rate of 29.7% in 2019, compared with the OECD average of 25.9%. In other words, in the Netherlands the take-home pay of an average single worker, after tax and benefits, was 70.3% of their gross wage, compared with the OECD average of 74.1%.

Taking into account child related benefits and tax provisions, the employee net average tax rate for an average married worker with two children in the Netherlands was reduced to 24.2% in 2019, which is the 5th highest in the OECD, and compares with 14.6% for the OECD average. This means that an average married worker with two children in the Netherlands had a take-home pay, after tax and family benefits, of 75.8% of their gross wage compared to 85.4% for the OECD average.
