Taxing Wages - Slovenia

Tax on labour income

The tax wedge is a measure of the tax on labour income, which includes the tax paid by both the employee and the employer.

\[
\text{TAX WEDGE ON LABOUR INCOME} = \frac{(\text{Personal income tax} + \text{employee and employer social security contributions (SSCs)}) - \text{Family Benefits}}{(\text{Total labour costs} (\text{gross wages} + \text{employer SSCs}))}
\]

Single worker

The tax wedge for the average single worker in Slovenia increased by 0.4 percentage points from 42.9 in 2017 to 43.3 in 2018.

The OECD average tax wedge in 2018 was 36.1 (2017, 36.2). In 2018 Slovenia had the 8th highest tax wedge among the 36 OECD member countries, compared with the 10th in 2017.

In Slovenia, income tax and employer social security contributions combine to account for 56% of the total tax wedge, compared with 77% of the total OECD average tax wedge.

One-earner married couple with two children

The tax wedge for a worker with children may be lower than for a worker on the same income without children, since most OECD countries provide benefits to families with children through cash transfers and preferential tax provisions.

Slovenia had the 22nd lowest tax wedge in the OECD for an average married worker with two children at 25.2% in 2018, which compares with the OECD average of 26.6%. The country occupied the 23rd lowest position in 2017.

Child related benefits and tax provisions tend to reduce the tax wedge for workers with children compared with the average single worker. In Slovenia in 2018, this reduction (18 percentage points) was greater than the OECD average (9.5 percentage points).
Tax wedge trends between 2000 and 2018

In Slovenia, the tax wedge for the average single worker decreased by 3 percentage points from 46.3% to 43.3% between 2000 and 2018. During the same period, the average tax wedge across the OECD decreased by 1.3 percentage points from 37.4% to 36.1%.

Since 2009, the tax wedge for the average single worker increased by 1.1 percentage points in Slovenia. During this same period, the tax wedge for the average single worker across the OECD increased by 0.6 percentage points.

Since 2009, the tax wedge for the average single worker increased by 1.1 percentage points in Slovenia. During this same period, the tax wedge for the average single worker across the OECD increased by 0.6 percentage points.

Average tax wedge over time for a single worker

In Slovenia, the average single worker faced a net average tax rate of 34.1% in 2018, compared with the OECD average of 25.5%.

In other words, in Slovenia the take-home pay of an average single worker, after tax and benefits, was 65.9% of their gross wage, compared with the OECD average of 74.5%.

Taking into account child related benefits and tax provisions, the employee net average tax rate for an average married worker with two children in Slovenia was reduced to 13.2% in 2018, which is the 21st lowest in the OECD, and compares with 14.2% for the OECD average. This means that an average married worker with two children in Slovenia had a take-home pay, after tax and family benefits, of 86.8% of their gross wage compared to 85.8% for the OECD average.
