United States: health care indicators

A. Efficiency and quality

B. Amenable mortality by group of causes

C. Prices and physical resources

D. Activity and consumption

E. Financing and spending mix

F. Policy and institutions

Note: Country groups have been determined by a cluster analysis performed on policy and institutional indicators. In all panels except Panel A, data points outside the average circle indicate that the level of the variable for the group or the country under scrutiny is higher than for the average OECD country (e.g. Australia has more scanners than the OECD average country).

In Panel A, data points outside the average circle indicate that the group or the country under scrutiny performs better than the OECD average (e.g. administrative costs as a share of total health care spending are lower in Australia than on average in the OECD area).

In all panels except Panel F, data represent the deviation from the OECD average and are expressed in number of standard deviations.

In Panel F, data shown are simple deviations from the OECD average.
