Corrigendum

Page 48:

The following paragraph has been updated to correct the average all-cause mortality rate in lower-middle and low income Asia-Pacific countries, and now reads as follows:

All-cause mortality for the entire population ranged from less than 300 per 100 000 population in Japan and Macao, China, to over 1 000 in Pakistan, Papua New Guinea, Myanmar and the Lao PDR (Figure 3.11). The average rate in lower-middle and low income Asia-Pacific countries and territories was **921**, 50% higher than that of the OECD. Nonetheless, mortality for the entire population had declined in all reporting Asia-Pacific between 2000 and 2016, and the gap with OECD countries had narrowed.
