Corrigendum

Page 37:

Sippy's friends should read Zippy's friends.

Page 158:

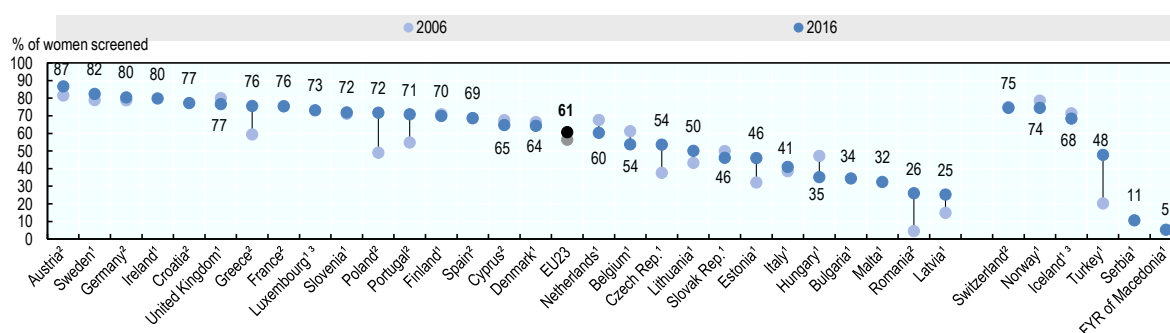

Paragraph three should read as follows:

On average, the proportion of women in EU countries aged 20-69 years who have been screened for cervical cancer within the past three years has increased from 56% to 61% over the past decade. However, the proportion has fallen in several countries. The proportion of screened women across EU countries still varies widely, from about 25% only in Latvia and Romania to over 80% in Austria and Sweden (Figure 6.16).

Page 159:

Figure 6.16 has been updated as the data for France was incorrect which also affected the EU average. The updated figure is as follows:

6.16. Cervical cancer screening in women aged 20-69 within the past 3 years, around 2006 and around 2016

1. Programme.

2. Survey.

3. Three-year average.

Note: The EU average is unweighted and only includes countries with data covering the whole time period.
