Corrigendum

Page 37:

Table 2.1 was replaced with:

Table 2.1. Having a child is associated with a longer NEET duration only for single women

Regression coefficients indicating the marginal effect of having the listed characteristic on the NEET duration

	Slovenia	OECD	Austria	Slovenia (25-29)	OECD (25-29)	Austria (25-29)
Compared to single childless men						
Married childless men	-5.4	-3.6	-1.7	-5.8	-3.4	-2.5
Single men with child(ren)	-7.4	4.2		-2.3	5.5	
Married men with child(ren)	-4.2	-4.6	-3.6	-4.6	-4.4	-4.4
Single childless women	0.4	-0.3	-0.5	4.8	1.5	-2.8
Married childless women	0.6	-0.3	-1.6	2.8	0.3	0.1
Single women with child(ren)	11.7	10.1	11.9	11.3	8.8	13.4
Married women with child(ren)	4.0	10.5	16.1	5.0	10.5	16.5
Compared to those in good health or who did not complete upper secondary education						
Poor health	6.4	8.7	6.3	13.4	10.5	9.6
Completed upper secondary education	-9.0	-9.2	-10.2	-9.8	-9.6	-2.0
Completed tertiary education	-11.0	-13.1	-10.8	-9.5	-12.5	-2.1
Compared to those with parents who did not complete upper secondary education or who are unemployed						
Parent(s) with upper secondary	0.8	-1.3	-0.4	3.9	-1.1	6.0
Parent(s) with tertiary education	2.3	-1.7	-0.1	6.5	-0.2	10.3
Parent(s) employed	-3.5	-3.1	-2.3	-6.8	-7.4	-2.1

Note: Linear regression results with robust standard errors based on pooled 2015 and 2016 panel data. Age and age squared are included as control variables. In the cross-country regression, country fixed effects are also included. The sample includes individuals who were not NEETs over the respectively covered 48-months period. Grey cells with figures in italics indicate results that are not statistically significant at the 0.1 level. An individual is considered as single if they are not living with a spouse or partner and as married if they are. Parental status is only identified for youth who live with their parents.
