Figures 5.14 – The labels on the y-axes have been changed to match the axis titles of ‘bcm’.

Adjusted figure:

Annex – Page 11

The note below Table A.5:

‘Where no significant regional variance in SEC is presented only current estimates of the global average are presented. SEC and BPT values are presented on a gross basis, i.e. without any credits for recycled fuel gas.’

Should state:

‘Where no significant regional variance in SEC is presented only **the global average values are presented. SEC and BPT values are presented on a gross basis, i.e. without any credits for recycled fuel gas. Ranges denoted for each component of SEC, hence the ‘low’ end of the range can appear to be less than the BPT. The combination of these ‘low’ values is not encountered in an individual plant, hence the BPT represents the lowest estimate of achievable overall SEC.**’
