Chapter 1. Reconciling Work and Family Life in OECD Countries:	
Main Findings and Policy Recommendations	11
1.1. Introduction	12
1.2. Policy objectives	12
1.3. Key family and work outcomes across OECD countries	15
1.4. The overall policy response	17
Notes	26
Chapter 2. The Demographic and Family Environment	27
2.1. How have family structures changed?	28
2.2. Changing patterns of family formation	29
2.3. Changing fertility behaviour	31
Notes	39
Chapter 3. Parents in Employment – Achievements and Challenges ...	41
3.1. Key labour market achievements	42
3.2. Remaining challenges	49
3.3. Conclusions	66
Notes	68
Chapter 4. Tax and Benefit Systems and the Work Choices by Parents .	69
4.1. Concise overview of the scope and nature of tax/benefit systems and support for families.	70
4.2. Financial incentives to work for couple families without childcare costs	77
4.3. Policies to help sole parents to combine work and care commitments	86
4.4. Conclusions	98
Notes	100
Chapter 5. Parental Leave to Care for Children	103
5.1. Parental leave policies are very different from one country to another.	104
5.2. Objectives and effects of leave policies	108

5.3. Conclusions	118
Notes	119
Annex 5.A1. Key Characteristics of Parental Leave Support.....	121
Chapter 6. Formal Child and Out-of-School-Hours Care Support.....	127
6.1. Past policy trends and current policy objectives	128
6.2. Diversity in childcare and early years services.....	132
6.3. Public spending and participation in childcare and pre-primary education	134
6.4. Conclusions	159
Notes	160
Annex 6.A1. Qualifications of Childcare and Pre-school Staff.....	162
Chapter 7. Family-friendly Workplace Practices	169
7.1. Time at work	171
7.2. Flexible workplace practices	181
7.3. The business case for family-friendly workplaces.....	185
7.4. Conclusions	190
Notes	192
Annex 7.A1. Some Quantitative Information on Work/Life Conflict Levels and Workplace Flexibility	194
Annex 7.A2. Selected National Information on the Prevalence of Employer-provided Workplace Support.....	197
Bibliography.....	201
Boxes	
1.1. What are family-friendly policies?.....	13
3.1. Mothers in employment are not always at work	48
3.2. Despite marked progress, gender differences in education persist.	55
3.3. Fathers and families	59
3.4. Lower female earnings: the costs of children.....	60
4.1. “Oportunidades” in Mexico, conditional support for low-income families	78
4.2. The Canadian Self-sufficiency Project.....	91
4.3. Policy reform in New Zealand.....	93
4.4. Reforming parenting payment in Australia, 2006	96
5.1. Child-related leaves in OECD countries.....	105
5.2. Parents at work and child development	109
5.3. Some municipalities in Finland pay parents not to use formal childcare services	113

5.4. Promoting gender equity and a more equal sharing of parental leave in Iceland	118
6.1. A more holistic approach to family support – Sure Start and Children’s Centres in England	130
6.2. Child Care Benefit in Australia	139
6.3. The quality of care and child development	142
6.4. Out-of-school-hours (OSH) care services in Denmark, Sweden and the Canadian province of Québec	149
7.1. In Japan and Korea labour market institutions and workplace practices restrict maternal employment and contribute to low birth rates	174
7.2. Men, women and time to care	180
7.3. Stress in workplaces	185

Tables

1.1. Key indicators on birth rates, female employment and child poverty	16
2.1. Households with more than two children are uncommon	28
2.2. Selected family statistics, OECD countries	31
3.1. Selected labour market statistics by gender, OECD countries, 2006.	45
3.2. Most mothers are in paid work, especially when children go to school, 2005	46
3.3. Gender employment gaps are smaller at higher levels of educational attainment	54
3.4. Children in sole-parent families face a relatively high poverty risk.	65
4.1. Public social spending exceeds a quarter of GDP in Austria, Belgium, Denmark, France, Germany, Norway and Sweden	71
4.2. Financial support for families with children varies with income level	77
4.3. In general, moving into work pays for parents in dual-earner couple families	80
4.4. Increasing part-time working hours may not pay for parents in couple families	82
4.5. Tax/benefit systems often favour dual earnership among couple families	85
4.6. Sole parents in Australia, Ireland, New Zealand and the United Kingdom can potentially remain on benefit for a long period of time.	88
4.7. Financial incentives to work for sole parents are relatively weak in Denmark, Norway and Switzerland (city of Zürich), 2004	89

4.8. Over the last ten years employment among sole parents has grown in Australia, Ireland, New Zealand and the United Kingdom from a low base	94
5.A1.1. Employment-protected statutory maternity leave arrangements, 2005-06	122
5.A1.2. Maternity allowance and maternity grants in place of, or in supplement to, statutory maternity pay, 2005-06	123
5.A1.3. Statutory paternity leave arrangements, 2005-06	124
5.A1.4. Statutory parental leave arrangements, 2005-06	125
6.1. Typology of childcare	133
6.A1.1. Qualifications of certified childcare workers and main place of work	164
6.A1.2. Qualifications of pre-school teachers and main place of work	166
7.1. European workers often have seven weeks of paid holidays per annum	178
7.2. Access to flexible workplace practices in the United States.	183
7.A1.1. Work/life conflict among workers in European countries	195
7.A2.1. Flexible workplace practices in Australia	197
7.A2.2. Canadian flexible workplace practices	198
7.A2.3. Flexible workplace practices in Japan	198
7.A2.4. Trends in flexible working practices in the United Kingdom.	199
7.A2.5. Employer-provided leave arrangements in the United Kingdom	199
7.A2.6. Employer-provided leave arrangements in the United States	200

Charts

1.1. Public spending on families has increased in many countries since 1980	18
2.1. There are fewer marriages which are more likely to end up in divorce.	30
2.2. Fertility patterns differ across the OECD.	33
2.3. Countries with high female employment rates now also have the highest fertility rates	35
2.4. Desired fertility has fallen, but remains above observed levels in most countries	37
2.5. In many OECD countries women in their 40s have fewer children than they would like.	38
3.1. Women participate increasingly in paid work	43
3.2. Most couples are dual-earner families.	49
3.3. Age-employment profiles, men and women	51
3.4. Female employment is concentrated in a relatively small number of occupations	58
3.5. In many countries gender pay gaps are largest at higher earnings.	62

3.6. Wives contribute far less to household income than their husbands	63
3.7. Sole-parent employment rates are lowest in Australia, Ireland, the Netherlands, New Zealand and the United Kingdom	64
4.1. Family spending has the greatest focus on childcare services in France and the Nordic countries	72
4.2. Sweden frontloads public spending during the early years	75
5.1. Compared to maternity leave, income support during parental leave is limited	107
6.1. Public spending on childcare is highest in the Nordic countries and in France	135
6.2. For children aged three and over childcare participation rates are generally high	136
6.3. Denmark has low child-to-staff ratios in childcare and pre-primary education	144
6.4. Childcare fees range from 5% of average earnings in central and eastern European countries and Sweden to one-third in Luxembourg and Switzerland	151
6.5. Net childcare costs are highest in Ireland	154
6.6. Net income gains from work for dual-earner families using childcare are smallest in Ireland and the United Kingdom	156
6.7. There are no short-term net income gains from work for sole parents with moderate earnings using childcare in France, Canada (Ontario), Switzerland (Zürich) and Ireland	158
7.1. Long hours are most usual in Australia, Austria, Greece, Japan, Korea, Mexico, New Zealand, Poland, Turkey and the United Kingdom	172
7.2. The majority of workers do not face major conflicts in their work/life balance	177
