Megatrends affecting water management

- Food insecurity
- Global shocks
- Urbanisation
- Economic development
- Climate change
- Demographic changes

Water risks

- Floods
- Water pollution
- Access to water and sanitation
- Ageing or missing infrastructure
- Competition over water allocation
- Water borne diseases
- Droughts

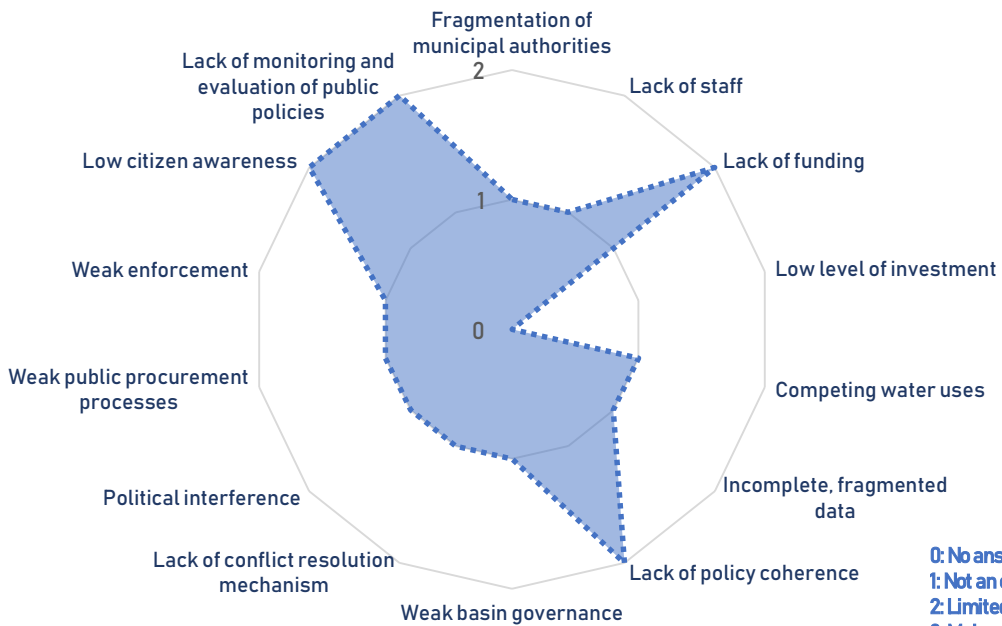

Policy areas influencing urban water management

- Transportation
- Agriculture
- Solid waste management
- Land use and spatial planning
- Building codes and housing
- Public health
- Tourism
- Manufacturing industry
- Energy

Obstacles to water governance

- 0: No answer
- 1: Not an obstacle
- 2: Limited obstacles
- 3: Major obstacles

National and local policy frameworks

National level

- Dedicated national water and sanitation policy indicating goals duties and resources
- Recognition of the UN right to Water and Sanitation

Local level

- Existence of a dedicated water and sanitation policy
- Minimum amount of water guaranteed to the population

- Social measures on water and/or sanitation for vulnerable categories

Transparency and accountability mechanisms

- Clear procurement processes
- Random integrity testing or audits
- Annual budget auditing of water and sanitation services
- Annual disclosure of financial information of water and sanitation services
- Clear budget transparency rules
- Anti-bribery management systems
- Clear and mandatory processes to prevent potential conflicts of interest

- Whistle-blower protection policies
- Institutional anti-corruption plans

Forward-looking strategies
