PISA

PISA 2022 Results

Factsheets

Palestinian Authority
Palestinian Authority

The Programme for International Student Assessment (PISA) assesses the knowledge and skills of 15-year-old students in mathematics, reading and science. The tests explore how well students can solve complex problems, think critically and communicate effectively. This gives insights into how well education systems are preparing students for real life challenges and future success. The Palestinian Authority participated for the first time in PISA in 2022. By comparing results internationally, policy makers and educators in the Palestinian Authority can learn from other countries’ policies and practices.

How well did 15-year-old students in the Palestinian Authority do on the test?

How does the Palestinian Authority compare?

Figure 1. Mean performance in mathematics, reading and science in PISA 2022
Palestinian Authority, OECD average and selected comparison countries

Notes: Comparison countries include the six highest-performing countries in each subject and the five countries with the largest population of 15-year-old students. Horizontal lines that extend beyond the markers represent a measure of uncertainty associated with mean estimates (the 95% confidence interval).
Source: OECD, PISA 2022 Database, Tables I.B1.2.1, I.B1.2.2 and I.B1.2.3.

- Students in the Palestinian Authority scored less than the OECD average in mathematics, reading and science.
- A smaller proportion of students in the Palestinian Authority, than on average across OECD countries, were top performers (Level 5 or 6) in at least one subject. At the same time a smaller
proportion of students than on average across OECD countries achieved a minimum level of proficiency (Level 2 or higher) in all three subjects.

**What students know and can do in mathematics**

- In the Palestinian Authority, 20% of students attained at least Level 2 proficiency in mathematics, significantly less than on average across OECD countries (OECD average: 69%). At a minimum, these students can interpret and recognize, without direct instructions, how a simple situation can be represented mathematically (e.g. comparing the total distance across two alternative routes, or converting prices into a different currency). Over 85% of students in Singapore, Macao (China), Japan, Hong Kong (China)*, Chinese Taipei and Estonia (in descending order of that share) performed at this level or above.

- Almost no students in the Palestinian Authority were top performers in mathematics, meaning that they attained Level 5 or 6 in the PISA mathematics test (OECD average: 9%). Six Asian countries and economies had the largest shares of students who did so: Singapore (41%), Chinese Taipei (32%), Macao (China) (29%), Hong Kong (China)* (27%), Japan (23%) and Korea (23%). At these levels, students can model complex situations mathematically, and can select, compare and evaluate appropriate problem-solving strategies for dealing with them. Only in 16 out of 81 countries and economies participating in PISA 2022 did more than 10% of students attain Level 5 or 6 proficiency.

**What students know and can do in reading**

- Some 23% of students in the Palestinian Authority attained Level 2 or higher in reading (OECD average: 74%). At a minimum, these students can identify the main idea in a text of moderate length, find information based on explicit, though sometimes complex criteria, and can reflect on the purpose and form of texts when explicitly directed to do so. The share of 15-year-old students who attained minimum levels of proficiency in reading (Level 2 or higher) varied from 89% in Singapore to 8% in Cambodia.
In the Palestinian Authority, almost no students scored at Level 5 or higher in reading (OECD average: 7%). These students can comprehend lengthy texts, deal with concepts that are abstract or counterintuitive, and establish distinctions between fact and opinion, based on implicit cues pertaining to the content or source of the information.

**What students know and can do in science**

- Some 28% of students in the Palestinian Authority attained Level 2 or higher in science (OECD average: 76%). At a minimum, these students can recognize the correct explanation for familiar scientific phenomena and can use such knowledge to identify, in simple cases, whether a conclusion is valid based on the data provided.
- In the Palestinian Authority, almost no students were top performers in science, meaning that they were proficient at Level 5 or 6 (OECD average: 7%). These students can creatively and autonomously apply their knowledge of and about science to a wide variety of situations, including unfamiliar ones.
A special edition of PISA

This PISA test was originally due to be conducted in 2021 but was delayed by one year because of the COVID-19 pandemic. The exceptional circumstances throughout this period, including lockdowns and school closures in many countries, led to occasional difficulties in collecting some data. While the vast majority of countries and economies met PISA’s technical standards, a small number did not. A country or economy in this note with an asterisk (*) next to its name means that caution is required when interpreting estimates because one or more PISA sampling standards were not reached. Further information can be found in the Reader’s Guide and in Annexes A2 and A4 of the main report.

In the Palestinian Authority, all data met the quality standards set by PISA and were considered fit for reporting.

Performance gaps within the Palestinian Authority

Socio-economic divides

Figure 3. Mean performance in mathematics, by international quintiles of socio-economic status

Note: The size of markers is proportional to the share of the student population within each quintile of socio-economic status (as determined by the PISA index of economic, social and cultural status, ESCS). Quintiles are defined at the international level, to include 20% of PISA participants in each quintile; within each national sample, the proportion can therefore differ from 20%. Vertical bars that extend beyond the markers represent a measure of uncertainty associated with each estimate (the 95% confidence interval). Horizontal, dashed lines represent the uncertainty associated with the mean score of the largest group of students (as defined by international quintiles) within the Palestinian Authority.

Source: OECD, PISA 2022 Database, Tables I.B1.4.6 and I.B1.4.8.

- The PISA index of economic, social and cultural status is computed in such a way that all students taking the PISA test, regardless of the country where they live, can be placed on the same socio-economic scale. This means that it is possible to use this index to compare the performance of students of similar socio-economic background in different countries. In the Palestinian Authority, 27% of students (the largest share) were in the 2nd international quintile of the socio-economic scale, meaning that they were neither among the most disadvantaged, nor among the most
advantaged students who took the PISA test in 2022. Their average score in mathematics was 359 score points. In Türkiye and Viet Nam, students of similar socio-economic background tend to score significantly higher.

- The PISA index of economic, social and cultural status can also be used to order students from the most disadvantaged to the most advantaged within each country and economy, and to create four groups of students of equal size (each comprising 25% of the population of 15-year-old students in each country/economy). In the Palestinian Authority socio-economically advantaged students (the top 25% in terms of socio-economic status) outperformed disadvantaged students (the bottom 25%) by 50 score points in mathematics. This is smaller than the average difference between the two groups (93 score points) across OECD countries.

- Socio-economic status was a predictor of performance in mathematics in all PISA participating countries and economies. It accounted for 7% of the variation in mathematics performance in PISA 2022 in the Palestinian Authority (compared to 15% on average across OECD countries).

- Some 12% of disadvantaged students in the Palestinian Authority were able to score in the top quarter of mathematics performance. These students can be considered academically resilient because, despite their socio-economic disadvantage, they have attained educational excellence by comparison with students in their own country. On average across OECD countries, 10% of disadvantaged students scored in the top quarter of mathematics performance in their own countries.

**Gender differences in performance**

- Girls outperformed boys in mathematics by 16 score points and in reading by 49 score points in the Palestinian Authority. Globally, in mathematics, boys outperformed girls in 40 countries and economies, girls outperformed boys in another 17 countries or economies, and no significant difference was found in the remaining 24. In reading, girls, on average, scored above boys in all but two countries and economies that participated in PISA 2022 (79 out of 81).

- In the Palestinian Authority, the share of low performers is larger among boys (83%) than among girls (77%) in mathematics; in reading, too, the share is larger among boys (69% of girls and 87% of boys scored below Level 2 in reading).

**How is school life in the Palestinian Authority?**

**Students’ sense of belonging at school and satisfaction with life**

- In 2022, 78% of students in the Palestinian Authority reported that they make friends easily at school (OECD average: 76%) and 78% felt that they belong at school (OECD average: 75%). Meanwhile, 20% reported feeling lonely at school, and 28% like an outsider or left out of things at school (OECD average: 16% and 17%).

- Students’ satisfaction with life, more generally, declined in many countries and economies over recent years. In 2022, 19% of students in the Palestinian Authority reported that they were not satisfied with their lives: they rated their satisfaction with life between 0 and 4 on a scale ranging from 0 to 10.
Support and discipline in mathematics lessons

- In the Palestinian Authority, 73% of students reported that, in most mathematics lessons, the teacher shows an interest in every student’s learning (OECD average: 63%), and 75% that the teacher gives extra help when students need it (OECD average: 70%).
- Many students study mathematics in a disciplinary climate that is not favourable to learning: in 2022, about 37% of students in the Palestinian Authority reported that they cannot work well in most or all lessons (OECD average: 23%); 38% of students do not listen to what the teacher says (OECD average: 30%); 26% of students get distracted using digital devices (OECD average: 30%); and 26% get distracted by other students who are using digital devices (OECD average: 25%). On average across OECD countries, students were less likely to report getting distracted using digital devices when the use of cell phones on school premises is banned.

Feeling safe at and around school

- PISA 2022 data show that in education systems where performance remained high and students’ sense of belonging improved, students tended to feel safer and less exposed to bullying and other risks at their school.
- In the Palestinian Authority, 11% of students reported not feeling safe on their way to school (OECD average: 8%); 11% of students reported not feeling safe in their classrooms at school (OECD average: 7%); 21% of students reported not feeling safe at other places at school (e.g. hallway, cafeteria, restroom) (OECD average: 10%).
- Some 27% of girls and 38% of boys reported being the victim of bullying acts at least a few times a month (OECD average: 20% of girls and 21% of boys). On average across OECD countries, fewer students were exposed to bullying in 2022 compared to 2018: for example, only 7% of students reported that other students spread nasty rumours about them in 2022, compared to 11% in 2018.
Parental involvement in learning

- PISA data collected from school principals show that the percentage of parents who were involved in school and learning decreased substantially between 2018 and 2022 in many countries/economies. In 2022, 25% of students in the Palestinian Authority were in schools whose principal reported that during the previous academic year at least half of all families discussed their child’s progress with a teacher on their own initiative (and 26% on the teacher’s initiative). Systems that had more positive trends in parental involvement between 2018 and 2022 (i.e. systems in which the share of parents who discussed their child’s progress with a teacher on their own initiative shrank less) tended to show more stable or improved performance in mathematics.

Learning during COVID-related school closures

- In the Palestinian Authority, 54% of students reported that their school building was closed for more than three months due to COVID-19. On average across OECD countries, 51% of students experienced similarly long school closures. In education systems where performance remained high and students’ sense of belonging improved, fewer students experienced longer school closures.
- During remote learning, 38% of students in the Palestinian Authority had problems at least once a week with understanding school assignments and 36% of students with finding someone who could help them with schoolwork (OECD averages: 34% and 24%). In education systems where performance remained high and students’ sense of belonging improved, fewer students encountered problems during remote learning.
- Support for students’ well-being was often limited when their schools were closed. In the Palestinian Authority, 31% of students reported that they were supported daily through live virtual classes on a video communication program. Only 23% of students reported that they were asked daily, by someone from the school, how they were feeling (OECD averages: 51% and 13%).
- If school buildings have to close again in the future, many students across the OECD feel confident about using digital technology for learning remotely but fewer students feel confident about taking responsibility for their own learning. Some 53% of students in the Palestinian Authority feel confident or very confident about using a video communication program and 65% of students feel confident or very confident about motivating themselves to do school work (OECD averages: 77% and 58%).

What else does PISA tell us?

Resources invested in education

- Expenditure on education is related to student performance only to a certain extent. Among the countries/economies whose cumulative expenditure per student, over all primary and secondary school years between the ages of 6 and 15, was under USD 75 000 (PPP) in 2019, higher expenditure on education was associated with higher scores in the PISA mathematics test. In the Palestinian Authority, the cumulative expenditure per student, over ten years of age between 6 and 15, was equivalent to about USD 30 900 (PPP).
- In about half of all countries/economies with comparable data, school principals in 2022 were more likely than their counterparts in 2018 to report a shortage of teaching staff. In 2022, 67% of students in the Palestinian Authority were in schools whose principal reported that the school’s capacity to provide instruction is hindered by a lack of teaching staff (and 62%, by inadequate or poorly qualified teaching staff). In most countries/economies, students attending schools whose principal
reported shortages of teaching staff scored lower in mathematics than students in schools whose principal reported fewer or no shortages of teaching staff.

**How students progress through schooling**

- When they sat the PISA test in 2022, 89% of 15-year-old students in the Palestinian Authority were enrolled in 10th grade.
- In the Palestinian Authority, 95% reported that they had attended pre-primary education for one year or more (OECD average: 94%). On average across OECD countries, students who had attended pre-primary education for one year or more scored higher in mathematics at the age of 15 than students who never attended or who had attended for less than one year, even after accounting for socio-economic factors.
- Some 11% of students in the Palestinian Authority reported that they had repeated a grade at least once (OECD average: 9%) after entering primary school. Grade repetition tends to be less prevalent in high performing systems.

**School autonomy**

- In the Palestinian Authority, 1% of students attended a school where principals had the main responsibility for hiring teachers (OECD average: 60%), and 2% were enrolled in a school where teachers had the main responsibility for choosing which learning materials are used (OECD average: 76%). Many high-performing school systems tend to entrust principals and teachers with these responsibilities.

**Key features of PISA 2022**

**The content**

- The PISA 2022 survey focused on mathematics, with reading and science as minor areas and creative thinking as the innovative area of assessment. PISA 2022 also included an assessment of young people’s financial literacy, which was optional for countries and economies. Results for mathematics, reading and science are released on 5 December 2023 and results for creative thinking and financial literacy in 2024.

**The students**

- Some 690 000 students took the assessment in 2022, representing about 29 million 15-year-olds in the schools of the 81 participating countries and economies.
- In the Palestinian Authority, 7905 students, in 273 schools, completed the assessment in mathematics, reading or science, representing about 88 400 15-year-old students (an estimated 78% of the total population of 15-year-olds).

**The assessment**

- Students took two hour-long tests, each devoted to one subject. Different students were given different test questions and different combinations of subjects (e.g. mathematics followed by reading, or science followed by mathematics, etc.). Test items were a mixture of multiple-choice questions and questions requiring students to construct their own responses.
Students also answered a background questionnaire, which took about 35 minutes to complete. The questionnaire sought information about the students themselves, their attitudes, dispositions and beliefs, their homes, and their school and learning experiences. School principals completed a questionnaire about school management, organisation, and the learning environment.

Some countries/economies also distributed additional questionnaires, to students, parents and/or teachers, to elicit more information. The findings from these optional questionnaires are not covered by this note.
