

### Revenue from environmentally related taxes in Canada<sup>1</sup>

As a share of GDP, Canada has the 5th lowest environmentally related tax revenue among 34 OECD and 5 partner economies. In 2014, environmentally related tax revenues were at 1.1% of GDP, compared to 2.0% on average among the 39 countries.

In Canada, taxes on energy represented 76% of total environmentally related tax revenue, compared to 70% on average among the 39 countries.

### Environmentally related tax revenue as a percentage of GDP, 2014

<sup>1</sup>Data from OECD.Stat include all OECD countries (except Latvia) and Argentina, Brazil, China, India and South Africa. Please see OECD.Stat for country specific notes.

### Taxes on energy use in Canada<sup>2</sup>

The [OECD's Taxing Energy Use \(2015\)](#) publication compares taxes on energy use (excise and carbon taxes) across 34 OECD and 7 partner economies. The chart below shows average tax rates, expressed in EUR per GJ, by sector across all fuels and the economy-wide average. The bubble size represents the weight of the sector in total energy use.

- » Canada has higher average tax rates on transport fuels (1.68 EUR/GJ) than on fuels used for heating and process purposes (0.09 EUR/GJ) or electricity generation (0 EUR/GJ);
- » Canada has the 7th lowest tax rate on energy on an economy-wide basis, at EUR 0.45 per GJ, compared with EUR 2.7 per GJ on a simple-average basis across the 34 OECD and 7 partner economies.

### Average tax rates on energy in transport, heating and process use, and electricity generation

<sup>2</sup>Data from *Taxing Energy Use* are for 2012 and include all OECD countries (except Latvia) and Argentina, Brazil, China, India, Indonesia, Russia and South Africa.

## Effective carbon rates in Canada

The [OECD's Effective Carbon Rates \(2016\)](#) publication presents the combined price signal on CO<sub>2</sub> emissions from taxes on energy and emissions trading systems (ETS), or the effective carbon rate (ECR).<sup>3</sup> The charts below show shares of CO<sub>2</sub> emissions subject to different price ranges, for road, non-road and all emissions from energy use. EUR 30 is a conservative estimate of the climate damage from one tonne of CO<sub>2</sub> emissions.

- In Canada, 57% of carbon emissions from energy use face no price signal at all; 43% face a price at or above EUR 5 per tonne of CO<sub>2</sub>; and 20% face a price at or above EUR 30 per tonne of CO<sub>2</sub>. This compares to a zero price for 60% of emissions across all countries, a price at or above EUR 5 per tonne for 30% and at or above EUR 30 per tonne for 10% of emissions.

- Excluding road use, 77% of carbon emissions from energy use in Canada face no price signal at all; 23% face a price at or above EUR 5 per tonne of CO<sub>2</sub>; and 1% face a price at or above EUR 30 per tonne of CO<sub>2</sub>. This compares to a zero price for 70% of emissions across all countries, a price at or above EUR 5 per tonne for 19% and at or above EUR 30 per tonne for 4% of emissions.

### Distribution of Effective Carbon Rates (ECR) on CO<sub>2</sub> emissions from energy use in Canada

Figures shown in the charts may not add up to 100% due to rounding.

<sup>3</sup>Notes on the interpretation of effective carbon rates: Box 3.1 (p.38-40), OECD's Effective Carbon Rates (2016), or consult <http://oe.cd/ECRinterpretation>

### CO<sub>2</sub> emissions priced and average rates in Canada

The table below shows the average price signals from taxes and trading systems, and the share of emissions priced by these instruments.

- » There is one subnational ETS in Canada, in Quebec, which had an average permit price of EUR 8.05 per tonne of CO<sub>2</sub> in 2013.

- In total, taxes in Canada price 40% of CO<sub>2</sub> emissions from energy use; and the Quebec ETS covers 9%. The sectors with the highest tax coverage are road transport (99%) and offroad transport (82%). The sectors with the highest price coverage by the ETS are road transport (19%) and offroad transport (9%).

### Share of emissions priced and average price signals from tax & ETS, Canada

CO <sub>2</sub> emissions by sector (in t CO <sub>2</sub> )	Tax		ETS		Overlap of tax and ETS <sup>5</sup>	Emissions not priced by tax or ETS
	Average price (in EUR/tCO <sub>2</sub> )	Share of emissions priced	Average price (in EUR/tCO <sub>2</sub> )	Share of emissions priced		
Agriculture & Fishing	11 481	14.3	75%	8.0	1%	25%
Electricity	80 107	22.8	1%	8.0	0%	99%
Industry	210 665	17.7	13%	8.0	5%	82%
Offroad transport	28 305	13.7	82%	8.0	9%	16%
Residential & Commercial	82 909	17.1	20%	8.0	8%	73%
Road transport	149 891	29.2	99%	8.0	19%	0%
<b>Total<sup>4</sup></b>	<b>563 359</b>	<b>9.9</b>	<b>40%</b>	<b>0.7</b>	<b>9%</b>	<b>57%</b>

Access the data for all 41 countries: <http://oe.cd/emissionsdata>

<sup>4</sup>Total average prices are weighted by the share of emissions in each sector that is priced in the country.

<sup>5</sup>Tax and ETS can apply to the same emissions base. The overlap describes the percentage of emissions in a sector that is priced by both tax and ETS.
