

Pension Country Profile: Austria

(Extract from the *OECD Private Pensions Outlook 2008*)

The *OECD Private Pensions Outlook 2008* contains a set of country profiles which describe in a concise manner the design of private pension systems in individual OECD countries. This document is an extract from this publication. For further information on the *Outlook*, please see www.oecd.org/daf/pensions/outlook.

Contents

Each Pension Country Profile is structured as follows:

➤ **How to Read the Country Profile**

This section explains how the information contained in the country profile is organised.

➤ **Country Profile**

The country profile is divided into six main sections:

- Demographics and macroeconomics
- Country pension design
- Pension funds data overview
- Reference information
- Overview of private pension system by type of plan and financing vehicle

➤ **Acronyms, Symbols and Conventional Signs**

➤ **Glossary**

How to Read the Country Profiles

This section provides country profiles, describing private pension arrangements in individual OECD countries. Each pension country profile is divided into six main sections:

- Demographics and macroeconomics
- Country pension design
- Pension funds data overview
- Private pension system's key characteristics
- Reference information
- Overview of private pension system by type of plan and financing vehicle

The figure below shows how the first three sections are organised on the first page of each country profile.

PRIVATE PENSIONS OUTLOOK 2008 – ISBN 978-92-64-04438-8 – © OECD 2009

Demographics and macroeconomics

1 The first section presents a selection of key demographics and macroeconomics indicators that provide a sense of the size of the country and its economy. GDP figures are from the *OECD Reference*

Series database. Population figures are from the *OECD Population and Labour Force database*.

Country pension design

This section is split into two parts:

2 Potential average pension benefit

This figure displays a broad estimate of the total pension income which an average-earning individual may receive from various sources (state, mandatory, and voluntary occupational pensions) after a full working lifetime. It is expressed as a percentage of the earnings the pensioner had just before retirement. These figures draw and expand on a microeconomic approach used in the publication *Pensions at a Glance*, looking at future individual pension entitlements under 2004 parameters and rules.

The pension incomes projected here, however, should be considered only as broad indications of what may happen, as they are conditional on a number of assumptions. It is assumed that individuals are covered by public pension plans throughout their careers. For the countries where occupational pension plans are common, average-earning individuals are assumed to be covered throughout their careers by occupational pension plans that are typical of market practice in that country. In countries where private pension accounts are compulsory, they are assumed to have participated in the compulsory system throughout their careers. Those with shorter, or periodically interrupted, careers should expect lower benefits than those which are set out in this figure.

A public pension can be an earnings-related pension (a pension computed by reference to a rate of emoluments, whether actual emoluments or not and whether final or average emoluments), a flat rate pension (a pension payable at a rate fixed otherwise than by reference to a rate of emoluments or to the rate of another pension), a minimum pension (the minimum level of pension benefits the plan pays out in all circumstances), a basic state pension (a non-earnings related pension paid by the State to

individuals with a minimum number of service years), or a means-tested pension (pension granted to a person after examination of his/her financial state).

Data cover public pensions and other mandatory or quasi-mandatory private pension plans. Voluntary plans are also included if they cover at least 30% of the working population. Additional pension income may come from other sources, such as individual savings, but these are not included in the data.

For five countries, several projections are presented as private pension systems are in a particular state of change.

3 Structure of private pension systems

The second part displays a bulleted list summarising the structure of private pension systems according to the pension plans currently in place in the country.

Pension funds data overview

4 The third section presents selected pension fund indicators from 2003 to 2007 from the *OECD Global Pension Statistics* project (www.oecd.org/daf/pensions/gps). For further data and analysis, readers can refer to Chapter 2 of this publication.

Private pension system's key characteristics

The information provided in this section covers eight private pension system key characteristics:

- Overview
- Coverage
- Typical plan design
- Contributions
- Benefits
- Fees
- Taxation
- Market information

Depending on data availability, these characteristics are developed for each existing category of pension plan (mandatory vs. voluntary pension plan, occupational vs. personal pension plan). Information provided in this section refers to December 2007 or to the latest available year.

Reference information

This section includes references to key legislation reforms, provides the name of regulatory and supervisory authorities and displays official statistical references and sources on private pensions.

Overview of private pension systems by type of plan and financing vehicle

This last section gives a detailed description of the various private pension plans found in each country as well as the statistical data coverage of the *OECD Global Pension Statistics*.

The following figure gives an example of such an overview. The first two columns provide the name and the description of each pension plan. Pension plans included in the *OECD GPS database* are marked with a tick in the next column, excluding OECD estimates. Under the column headings “Type of plan” and “Financing vehicle” are given the correspondence of each pension plan with the OECD Classification by funding vehicle and by type (see OECD (2005), *Private Pensions: OECD Classification and Glossary*, OECD, Paris).

Private pension system's key characteristics

Occupational mandatory

Overview

Austria applies a severance pay system. It is occupational and participation has been mandatory since 2002. Severance contributions are paid into so-called "staff provision funds". The system was reformed in 2003, turning it from a defined benefit type of severance pay scheme into an individual defined contribution plan.

Employers may choose their own staff provision fund. If they do not do so, they are allocated one by the Main Association of Austrian Social Security Institutions by means of an automated procedure that uses a formula based on the share of market held by the different funds.

Staff provision funds are of the defined contribution type and the financing vehicles in which they invest contributions are collective investment undertakings.

Coverage

The new mandatory severance pay system applies to all employment relationships that commenced after 31 December 2002. Employers and employees can choose to incorporate it into existing terms of employment by written agreement. The coverage rate in 2006 was 43.19% of employees.

Contributions

Employers pay a mandatory contribution equivalent to 1.53% of an employee's salary. Employees, however, cannot make contributions.

Benefits

Employees may choose to receive the benefit of their individual defined contribution accounts as a lump sum or as an annuity when they reach the normal retirement age for public pension benefits.

Taxation

The mandatory portion of employer contributions (1.53% of the payroll) is not taxable, but any additional voluntary contributions are taxed. Employee benefits are tax-free if paid out as annuities, but lump sums are liable to a 6% income tax.

Occupational voluntary

Overview

Voluntary occupational pension plans in Austria can be either defined benefit or defined contribution in nature and may be instituted by employers or groups of employers. Employers may either set up a *Pensionskasse* or use another financing vehicle, e.g. book reserves, pension insurance contracts, or pension support funds. The information below applies only to *Pensionskassen*.

Employers enter into contracts with *Pensionskassen* to provide pension benefits for their employees. Since 2005 they have also been able to purchase life insurance contracts for their employees, acting as their group life insurance policy holders. This occupational provision is available from the main insurance companies, and employers can offer it in

addition to the *Pensionskasse* arrangement. Contracts guarantee a 2.25% interest rate, but have not so far proved very popular.

Coverage

Collective bargaining agreements can require employers to enter into a pension contract with a *Pensionskasse*. *Pensionskassen* manage plans for groups of at least 1 000 beneficiaries and in 2006 they covered around 13.2% of the labour force.

Typical plan design

Defined benefit plans typically define pensionable earnings as the final salary or final average salary. A typical accrual rate is between 0.1% and 0.3% of pensionable earnings up to the social security ceiling, and between 1% and 2% of pensionable earnings for salaries above that ceiling for each year of service.

A typical defined contribution plan offers contribution rates ranging from 1% to 3% of pensionable earnings below the social security ceiling, and between 5% and 15% of pensionable earnings above the social security ceiling.

Plans are funded by employer contributions. Employees may make additional contributions on a voluntary basis. They must not, however, exceed the sum of annual employer contributions, the level of which is set in the pension contract between the employer and *Pensionskasse*. The average annual contribution per active member was EUR 1 290 in 2005.

Benefit levels are laid down in the pension contract signed by employer and *Pensionskasse*. Benefits are generally paid out as life-long pensions or as lump sums if total benefits are below EUR 10 500 (from 1 January 2009). The *Pensionskassen* themselves pay out benefits.

The normal retirement age in occupational pension plans is 65.

Taxation

For pension-saving purposes, employer and employee contributions are held in separate funds and governed by different taxation rules. Employer contributions are income-tax deductible up to a ceiling of 10% of the payroll.

As regards defined benefit plans, however, the only tax-deductible contributions are those that go towards pensions that yield benefits of 80% of an employee's income. Employee contributions are tax-deductible as special expenses. Investment income, too, is tax-exempt. Benefit payments financed by employee contributions are taxed at a quarter of the ordinary income tax rate, while the portion of benefit payments financed by employer contributions is also liable to taxation.

Personal voluntary

Overview

The Austrian market includes a personal, voluntary, state-sponsored retirement provision (*prämienbegünstigte Zukunftsvorsorge*), known by the acronym PZV.

Coverage

Any taxpayer under the age of 62 may join the state-sponsored retirement provision arrangement.

Contributions

Contribution levels are set forth in the contract between contributor and provider. The state tops up contributions by a percentage which varies each year until the contributor reaches 62. The 2007 percentage was 9%, or a maximum state top-up of EUR 190. Participants must make payments for at least 10 years, during which time their savings are locked in.

Benefits

Benefits can be paid out from the age of 40 in the form of a taxable lump sum or tax-exempt annuity. In the latter case, the accrued benefits must first be transferred to a *Pensionskasse*. Benefits can also be reinvested on a tax-exempt basis.

Taxation

Contributions and investment income are tax-exempt, while benefit payments are not taxed if they are paid out as a monthly annuity after retirement age. Benefits and capital gains are taxed if paid out before retirement.

Market information

Occupational mandatory

On 31 December 2007 there were nine staff provision funds on the market: APK, BAWAG Allianz, BONUS, BUAK, Niederösterreichische, ÖVK, Siemens, VBV, and Victoria-Volksbanken. Each fund manages one collective investment undertaking. There are approximately 319 400 membership contracts, according to the Financial Markets Authority.

Total assets in the severance pay system amounted to approximately EUR 1.6 billion. Staff provision funds must guarantee a minimum severance pay – a so-called “capital guarantee” – and are free to promise higher guarantees. The capital guarantee obligation tends to drive staff provision funds to choose conservative investment options, but participants in severance pay systems can switch to other staff provision funds, pension funds (*Pensionskassen*), or to pension annuity insurance accounts.

Occupational voluntary

In December 2007, the total number of participants was 542 388. There were 19 *Pensionskassen*, 15 of which served only one employer, managing assets worth EUR 12.9 billion (USD 18 billion). The market is dominated by the three largest market participants, namely APK-Pensionskasse AG, ÖPAG Pensionskassen AG, and VBV Pensionskasse AG, which account for approximately two-thirds of the market.

Personal voluntary

The PZV product has proved popular – over 988 000 people had joined by the end of 2006. PZV contracts are offered by over 20 different insurance companies and pension investment funds (*Kapitalanlagegesellschaften*). Though legislation requires contracts to have a duration of at least ten years, they run for 20, 30, or even 45 years, in practice. Total contributions amounted to EUR 690 million in 2006. Providers must appoint a guarantor (except where they have established an internal risk model) and may be required to hold additional reserves.

Reference information

Key legislation

2006: Regulations relaxing investment limits for *Pensionskassen* passed.

2004: The Harmonisation of Austrian Pension Systems Act reforms the state pension system.

2002: The Act on Corporate Staff Provision (amended in 2006) introduces the new severance pay system. It regulates the setting-up and management of staff provision funds (investment limits, capital requirements).

1990: The *Pensionskassen* Act regulates the *Pensionskassen* system.

Key regulatory and supervisory authorities

The Ministry of Social Affairs and Consumer Protection: chiefly responsible for supervising the Austrian public pension system, www.bmsk.gv.at/cms/siteEN/.

The Ministry of Finance: regulates private pensions, <http://english.bmf.gv.at/>.

The Financial Market Authority (FMA): Austria's chief financial supervisory body. It carries out risk-based supervision of pension entities, www.fma.gv.at.

Notes

1. Statistics Canada (2004), *Pension Plans in Canada*, Pensions and Wealth Research Series, 1 January.
2. Statistics Canada.
3. The Reserve Fund is established with 5% of the pension company profits.
4. The TFR is a sort of severance pay scheme that the employer has to pay to an employee in the case of his dismissal or retirement. Every month the employer sets aside 6.91% of the gross salary of the employee; every year the accumulated stock of the TFR, which is accounted as a book reserve in the balance sheet of the employer, is appreciated according to a CPI-linked formula.
5. Minimum pension is equivalent to a 1997's monthly minimum wage updated in accordance with inflation.
6. The average monthly wage in Poland is PLN 2 869.69 (USD 1 025) before tax and social security contributions. The net wage is around 70% of the gross.
7. Contribution rates and information on rates of contracting out were obtained from the Department for Work and Pensions' report entitled *Employers' Pension Provision Survey 2005*.

Glossary

Most of the definitions below draw on the publication *Private Pensions: OECD Classification and Glossary*. It can be downloaded at the following address: www.oecd.org/dataoecd/0/49/38356329.pdf.

Term	Definition
Active member	A pension plan member who is making contributions (and/or on behalf of whom contributions are being made) and is accumulating assets or has accrued assets in the past and is not yet retired.
Annuity	A form of financial contract mostly sold by life insurance companies that guarantees a fixed or variable payment of income benefit (monthly, quarterly, half-yearly, or yearly) for the life of a person (the annuitant) or for a specified period of time. It is different from a life insurance contract which provides income to the beneficiary after the death of the insured. An annuity may be bought through instalments or as a single lump sum. Benefits may start immediately or at a pre-defined time in the future or at a specific age.
Asset allocation	The spread of fund investments among different investment forms.
Asset manager	The individual(s) or entity(ies) endowed with the responsibility to physically invest the pension fund assets. Asset managers may also set out the investment strategy for a pension fund.
Basic state pension	A non-earning related pension paid by the State to individuals with a minimum number of service years.
Beneficiary	An individual who is entitled to a benefit (including the plan member and dependants).
Benefit	Payment made to a pension fund member (or dependants) after retirement.
Book reserved pension plans	Sums entered in the balance sheet of the plan sponsor as reserves or provisions for occupational pension plan benefits. Some assets may be held in separate accounts for the purpose of financing benefits, but are not legally or contractually pension plan assets. Most OECD countries do not allow this method of financing. Those that do usually require these plans to be insured against bankruptcy of the plan sponsor through insolvency guaranty arrangement.
Closed pension funds	Funds that support only pension plans that are limited to certain employees (<i>e.g.</i> those of an employer or group of employers).
Contribution	A payment made to a pension plan by a plan sponsor or a plan member.
Contribution rate	The amount (typically expressed as a percentage of the contribution base) that is needed to be paid into the pension fund.
Deferred member	A pension plan member that no longer contributes to or accrues benefits from the plan but has not yet begun to receive retirement benefits from that plan.
Deferred pension	A pension arrangement in which a portion of an employee's income is paid out at a date after which that income is actually earned.
Deferred retirement	A situation when an individual decides to retire later and draw the pension benefits later than their normal retirement age.
Defined benefit (DB) occupational pension plans	Occupational plans other than defined contribution plans. DB plans generally can be classified into one of three main types, "traditional", "mixed" and "hybrid" plans.
"Traditional" DB plan	A DB plan where benefits are linked through a formula to the members' wages or salaries, length of employment, or other factors.

Term	Definition
"Hybrid" DB plan	A DB plan where benefits depend on a rate of return credited to contributions, where this rate of return is either specified in the plan rules, independently of the actual return on any supporting assets (<i>e.g.</i> fixed, indexed to a market benchmark, tied to salary or profit growth, etc.), or is calculated with reference to the actual return of any supporting assets and a minimum return guarantee specified in the plan rules.
"Mixed" DB plan	A DB plan that have two separate DB and DC components but which are treated as part of the same plan.
Defined contribution (DC) occupational pension plans	Occupational pension plans under which the plan sponsor pays fixed contributions and has no legal or constructive obligation to pay further contributions to an ongoing plan in the event of unfavourable plan experience.
Dependant	An individual who is financially dependent on a (passive or active) member of a pension scheme.
Dependency ratio	Typically defined as the ratio of non-active age to those of active age in a given population.
Final average earnings	The fund member's earnings that are used to calculate the pension benefit in a defined benefit plan; it is typically the earnings of the last few years prior to retirement.
Fund member	An individual who is either an active (working or contributing, and hence actively accumulating assets) or passive (retired, and hence receiving benefits), or deferred (holding deferred benefits) participant in a pension plan.
Funded pension plans	Occupational or personal pension plans that accumulate dedicated assets to cover the plan's liabilities.
Funding	The act of accumulating assets in order to finance the pension plan.
Funding level	The relative value of a scheme's assets and liabilities, usually expressed as a percentage figure.
Funding rules	Regulation that requires the maintenance of a certain level of assets in a pension fund in relation to pension plan liabilities.
Gross rate of return	The rate of return of an asset or portfolio over a specified time period, prior to discounting any fees of commissions.
Group pension funds	Multi-employer pension funds that pool the assets of pension plans established for related employers.
Industry pension funds	Funds that pool the assets of pension plans established for unrelated employers who are involved in the same trade or business.
Mandatory contribution	The level of contribution the member (or an entity on behalf of the member) is required to pay according to scheme rules.
Mandatory occupational plans	Participation in these plans is mandatory for employers. Employers are obliged by law to participate in a pension plan. Employers must set up (and make contributions to) occupational pension plans which employees will normally be required to join. Where employers are obliged to offer an occupational pension plan, but the employees' membership is on a voluntary basis, these plans are also considered mandatory.
Mandatory personal plans	These are personal plans that individuals must join or which are eligible to receive mandatory pension contributions. Individuals may be required to make pension contributions to a pension plan of their choice normally within a certain range of choices or to a specific pension plan.
Minimum pension	The minimum level of pension benefits the plan pays out in all circumstances.
Multi-employer pension funds	Funds that pool the assets of pension plans established by various plan sponsors. There are three types of multi-employer pension funds: <i>a)</i> for related employers <i>i.e.</i> companies that are financially connected or owned by a single holding group (group pension funds); <i>b)</i> for unrelated employers who are involved in the same trade or business (industry pension funds); <i>c)</i> for unrelated employers that may be in different trades or businesses (collective pension funds).
Net rate of return	The rate of return of an asset or portfolio over a specified time period, after discounting any fees of commissions.
Normal pension age	Age from which the individual is eligible for pension benefits.
Occupational pension plans	Access to such plans is linked to an employment or professional relationship between the plan member and the entity that establishes the plan (the plan sponsor). Occupational plans may be established by employers or groups thereof (<i>e.g.</i> industry associations) and labour or professional associations, jointly or separately. The plan may be administered directly by the plan sponsor or by an independent entity (a pension fund or a financial institution acting as pension provider). In the latter case, the plan sponsor may still have oversight responsibilities over the operation of the plan.
Open pension funds	Funds that support at least one plan with no restriction on membership.

Term	Definition
Overfunding	The situation when the value of a plan's assets are more than its liabilities, thereby having an actuarial surplus.
Pension assets	All forms of investment with a value associated to a pension plan.
Pension funds	The pool of assets forming an independent legal entity that are bought with the contributions to a pension plan for the exclusive purpose of financing pension plan benefits. The plan/fund members have a legal or beneficial right or some other contractual claim against the assets of the pension fund. Pension funds take the form of either a special purpose entity with legal personality (such as a trust, foundation, or corporate entity) or a legally separated fund without legal personality managed by a dedicated provider (pension fund management company) or other financial institution on behalf of the plan/fund members.
Pension insurance contracts	Insurance contracts that specify pension plans contributions to an insurance undertaking in exchange for which the pension plan benefits will be paid when the members reach a specified retirement age or on earlier exit of members from the plan. Most countries limit the integration of pension plans only into pension funds, as the financial vehicle of the pension plan. Other countries also consider the pension insurance contract as the financial vehicle for pension plans.
Pension plan	A legally binding contract having an explicit retirement objective (or in order to satisfy tax related conditions or contract provisions the benefits cannot be paid at all or without a significant penalty unless the beneficiary is older than a legally defined retirement age). This contract may be part of a broader employment contract, it may be set forth in the plan rules or documents, or it may be required by law. In addition to having an explicit retirement objective, pension plans may offer additional benefits, such as disability, sickness, and survivors' benefits.
Pension plan sponsor	An institution (<i>e.g.</i> company, industry/ employment association) that designs, negotiates, and normally helps to administer an occupational pension plan for its employees or members.
Personal pension plans	Access to these plans does not have to be linked to an employment relationship. The plans are established and administered directly by a pension fund or a financial institution acting as pension provider without any intervention of employers. Individuals independently purchase and select material aspects of the arrangements. The employer may nonetheless make contributions to personal pension plans. Some personal plans may have restricted membership.
Private pension funds	A pension fund that is regulated under private sector law.
Private pension plans	A pension plan administered by an institution other than general government. Private pension plans may be administered directly by a private sector employer acting as the plan sponsor, a private pension fund or a private sector provider. Private pension plans may complement or substitute for public pension plans. In some countries, these may include plans for public sector workers.
Projected Benefit Obligation (PBO)	The actuarial present value of vested and non-vested benefits attributed to the plan through the pension benefit formula for service rendered to that date based on employees' future salary levels.
Protected pension plan	A plan (personal pension plan or occupational defined contribution pension plan) other than an unprotected pension plan. The guarantees or promises may be offered by the pension plan/fund itself or the plan provider (<i>e.g.</i> deferred annuity, guaranteed rate of return).
Public pension funds	Pension funds that are regulated under public sector law.
Public pension plans	Social security and similar statutory programmes administered by the general government (that is central, state, and local governments, as well as other public sector bodies such as social security institutions). Public pension plans have been traditionally PAYG financed, but some OECD countries have partial funding of public pension liabilities or have replaced these plans by private pension plans.
Rate of return	The income earned by holding an asset over a specified period.
Replacement rate	The ratio of an individual's (or a given population's) (average) pension in a given time period and the (average) income in a given time period.
Separate accounts	A pension fund that is legally segregated from both the plan sponsor and a financial institution that acts as the manager of the fund on behalf of the plan member.
Single employer pension funds	Funds that pool the assets of pension plans established by a single sponsor.
Trust	A legal scheme, whereby named people (termed trustees) hold property on behalf of other people (termed beneficiaries).
Trustee	A person or a company appointed to carry out the tasks of the trust.
Underfunding	The situation when the value of a plan's assets are less than its liabilities, thereby having an actuarial deficiency.

Term	Definition
Unfunded pension plans	Plans that are financed directly from contributions from the plan sponsor or provider and/ or the plan participant. Unfunded pension plans are said to be paid on a current disbursement method (also known as the pay as you go, PAYG, method). Unfunded plans may still have associated reserves to cover immediate expenses or smooth contributions within given time periods. Most OECD countries do not allow unfunded private pension plans.
Unprotected pension plan	A plan (personal pension plan or occupational defined contribution pension plan) where the pension plan/fund itself or the pension provider does not offer any investment return or benefit guarantees or promises covering the whole plan fund.
Voluntary contribution	An extra contribution paid in addition to the mandatory contribution a member can pay to the pension fund in order to increase the future pension benefits.
Voluntary occupational pension plans	The establishment of these plans is voluntary for employers (including those in which there is automatic enrolment as part of an employment contract or where the law requires employees to join plans set up on a voluntary basis by their employers). In some countries, employers can, on a voluntary basis, establish occupational plans that provide benefits that replace at least partly those of the social security system. These plans are classified as voluntary, even though employers must continue sponsoring these plans in order to be exempted (at least partly) from social security contributions.
Voluntary personal pension plans	Participation in these plans is voluntary for individuals. By law individuals are not obliged to participate in a pension plan. They are not required to make pension contributions to a pension plan. Voluntary personal plans include those plans that individuals must join if they choose to replace part of their social security benefits with those from personal pension plans.
